Bits	Description
31:13	Reserved.
12	COMPLETION_TIMEOUT_LOG_CAPABLE . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording the TLP Prefix (if any) and the Header for the TLP corresponding to a detected Completion Timeout error.
11	TLP_PREFIX_LOG_PRESENT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. When the First Error Pointer is valid, indicates that the TLP Prefix Log register contains valid information. This bit is sticky. If End-End TLP Prefix Supported bit is not set, this bit is Reserved.
10	MULTI_HDR_RECD_EN . Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the function is permitted to record more than one error header.
9	MULTI_HDR_RECD_CAP . Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording more than one error header.
8	ECRC_CHECK_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function checks ECRC. This bit is sticky.
7	ECRC_CHECK_CAP . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of checking ECRC.
6	ECRC_GEN_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function generates ECRC. This bit is sticky.
5	ECRC_GEN_CAP . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of generating ECRC.
4:0	FIRST_ERR_PTR . Read-only. Reset: 00h. Indicates the bit position of the first error reported in the Uncorrectable Error Status register. This field is only valid if the indicated bit is also set. This field is sticky.

BXXD0[1F1...2F1]x16C (PCIERCCFG::PCIE_HDR_LOG0)

Read-only. Reset: 0000_0000h.

Header Log register.

Bits	Description
31:16	Reserved.
15:9	ENABLE_LOWER_SKP_OS_GEN. Read-write. Reset: 00h. Controls if the Port overrides SRIS requirements for SKP ordered set transmission rates by transmitting SKP ordered sets at the SRNS scheduling rate when in L0, for the indicated speed(s). ValidValues: See: PCIERCCFG::PCIE_LINK_CNTL3[ENABLE_LOWER_SKP_OS_GEN] Valid Values.
8:2	Reserved.
1	LINK_EQUALIZATION_REQ_INT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Downstream Ports only) Controls if the Downstream Port generates an interrupt to indicate that the Link Equalization Request 8.0 GT/s , or the Link Equalization Request 16.0 GT/s, or the Link Equalization Request 32.0 GT/s bits have been set. For Upstream Ports that don't support crosslinks, this bit is Reserved.
0	PERFORM_EQUALIZATION. Read-write. Reset: 0. 0=Normal Operation. 1=Perform Equalization. Description: (Downstream Ports only) Forces the Downstream Port to perform link equalization, when a 1 is written to Retrain Link bit with Target Link Speed field set to 8.0 GT/s or higher. For Upstream Ports that don't support crosslinks, this bit is Reserved.

PCIERCCFG::PCIE_LINK_CNTL3[ENABLE_LOWER_SKP_OS_GEN] Valid Values

Value	Description
00h	Lower SKP Generation Disabled
01h	Enabled at 2.5 GT/s
02h	Enabled at 5.0 GT/s
03h	Enabled at 2.5 to 5.0 GT/s
04h	Enabled at 8.0 GT/s
05h	Enabled at 2.5 & 8.0 GT/s
06h	Enabled at 5.0 to 8.0 GT/s
07h	Enabled at 2.5 to 8.0 GT/s
08h	Enabled at 16.0 GT/s
09h	Enabled at 2.5 & 16.0 GT/s
0Ah	Enabled at 5.0 & 16.0 GT/s
0Bh	Enabled at 2.5 & 5.0 & 16.0 GT/s
0Ch	Enabled at 8.0 to 16.0 GT/s
0Dh	Enabled at 2.5 & 8.0 & 16.0 GT/s
0Eh	Enabled at 5.0 to 16.0 GT/s
0Fh	Enabled at 2.5 to 16.0 GT/s

10h	Enabled at 32.0 GT/s
11h	Enabled at 2.5 & 32.0 GT/s
12h	Enabled at 5.0 & 32.0 GT/s
13h	Enabled at 2.5 & 5.0 & 32.0 GT/s
14h	Enabled at 8.0 & 32.0 GT/s
15h	Enabled at 2.5 & 8.0 & 32.0 GT/s
16h	Enabled at 5.0 & 8.0 & 32.0 GT/s
17h	Enabled at 2.5 & 5.0 & 8.0 & 32.0 GT/s
18h	Enabled at 16.0 to 32.0 GT/s
19h	Enabled at 2.5 & 16.0 & 32.0 GT/s
1Ah	Enabled at 5.0 & 16.0 & 32.0 GT/s
1Bh	Enabled at 2.5 & 5.0 & 16.0 & 32.0 GT/s
1Ch	Enabled at 8.0 to 32.0 GT/s
1Dh	Enabled at 2.5 & 8.0 & 16.0 & 32.0 GT/s
1Eh	Enabled at 5.0 to 32.0 GT/s
1Fh	Enabled at 2.5 to 32.0 GT/s
7Fh-20h	Reserved.

BXXD0[1F1...2F1]x278 (PCIERCCFG::PCIE_LANE_ERROR_STATUS)

Read,Write-1-to-clear. Reset: 0000_0000h.

Lane Error Status register.

31:16 Reserved.

15:0 **LANE_ERROR_STATUS_BITS.** Read,Write-1-to-clear. Reset: 0000h. Indicates if the corresponding lane detected a lane based error. This field is a bit vector that covers all supported lanes. Bit 0 corresponds to the default lane 0, and bit ordering is invariant to link width and lane reversal negotiation. This field is sticky.

15	Reserved.
14:12	UPSTREAM_PORT_8GT_RX_PRESET_HINT. Read-write. Reset: 7h.

	Description: Selects the receiver preset hint value that the Downstream Port requests the other side to optionally use for initial operation at 8.0 GT/s . (Upstream Ports only) captures the receiver preset hint value that the Upstream Port received from the other side for initial operation at 8.0 GT/s.
11:8	UPSTREAM_PORT_8GT_TX_PRESET. Read-write. Reset: Fh. Description: Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 8.0 GT/s . (Upstream Ports only) captures the transmitter preset value that the Upstream Port received from the other side for initial operation at 8.0 GT/s.
7	Reserved.
6:4	DOWNSTREAM_PORT_8GT_RX_PRESET_HINT. Read-write. Reset: 7h. Description: Optionally selects the Downstream Port's receiver preset hint for initial operation at 8.0 GT/s . For Upstream Ports that don't support crosslinks, this bit is Reserved.
3:0	DOWNSTREAM_PORT_8GT_TX_PRESET. Read-write. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 8.0 GT/s . For Upstream Ports that don't support crosslinks, this bit is Reserved.

Bits	Description										
15:13	Reserved.										
12	UNCLAIMED_REQUEST_REDIRECT_CNTL. Read-write. Reset: Fixed,0. 0=Unsupported Request. 1=Forwarded upstream. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port memory aperture which is not within any of the component's Switch Downstream Port memory aperture or BAR claimed memory space.										
11:10	USP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: Fixed,0h. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port BAR claimed memory space. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Request allowed</td></tr> <tr> <td>1h</td><td>Request blocked</td></tr> <tr> <td>2h</td><td>Request redirected</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Request allowed	1h	Request blocked	2h	Request redirected	3h	Reserved.
Value	Description										
0h	Request allowed										
1h	Request blocked										
2h	Request redirected										
3h	Reserved.										
9:8	DSP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: Fixed,0h. Controls how the component handles upstream Memory Requests that target the component's BAR claimed memory space. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Request allowed</td></tr> <tr> <td>1h</td><td>Request blocked</td></tr> <tr> <td>2h</td><td>Request redirected</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Request allowed	1h	Request blocked	2h	Request redirected	3h	Reserved.
Value	Description										
0h	Request allowed										
1h	Request blocked										
2h	Request redirected										
3h	Reserved.										
7	IO_REQUEST_BLOCKING_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the component handles upstream I/O Requests as ACS Violations.										
6	DIRECT_TRANSLATED_P2P_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component overrides the ACS P2P Request Redirect and ACS P2P Egress Control mechanisms with P2P Memory Requests whose Address Translation field indicates a Translated address.										
5	P2P_EGRESS_CONTROL_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. In conjunction with the Egress Control Vector plus the ACS P2P Request Redirect and ACS Direct Translated P2P mechanisms, controls when to allow, disallow, or redirect P2P Requests.										
4	UPSTREAM_FORWARDING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component forwards Upstream any Request or Completion TLPs it receives that were redirected Upstream by a component lower in the hierarchy.										
3	P2P_COMPLETION_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component redirects P2P Completions Upstream; applicable only to Read Completions whose Relaxed Ordering Attribute is clear.										

2	P2P_REQUEST_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. In conjunction with ACS P2P Egress Control and ACS Direct Translated P2P mechanisms, controls if the component redirects P2P Requests Upstream.
1	TRANSLATION_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component blocks all Upstream Memory Requests whose Address Translation field is not set to the default value.
0	SOURCE_VALIDATION_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component validates the Bus Number from the Requester ID of Upstream Requests against the secondary or subordinate Bus Numbers.

Bits	Description
31:8	Reserved.
7:3	T_POWER_ON_VALUE. Read-write. Reset: 05h. When any of PCI-PM L1.2 Supported bit or ASPM L1.2 Supported bit is set, and if programmed when ASPM L1.2 Enable bit and PCI-PM L1.2 Enable bit are both clear, in combination with the T_POWER_ON Scale value, controls the minimum amount of time (in us) that the Port must wait in L1.2.Exit after sampling CLKREQ# asserted before actively driving the interface.
2	Reserved.
1:0	T_POWER_ON_SCALE. Read-write. Reset: 0h. When any of PCI-PM L1.2 Supported bit or ASPM L1.2 Supported bit is set, and if programmed when ASPM L1.2 Enable bit and PCI-PM L1.2 Enable bit are both clear, controls the scale used for T_POWER_ON Value.
ValidValues:	
Value	Description
0h	2 us
1h	10 us
2h	100 us
3h	Reserved.

Bits	Description
15:13	Reserved.
12	DL_ACTIVE_ERR_COR_SIGNALING_SUPPORTED. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports the ability to signal with ERR_COR when the Link transitions to the DL_Active state.
11:8	RP_PIO_LOG_SIZE. Read-only. Reset: Fixed,6h. Indicates how many DWORDs are allocated for the RP PIO log registers. When RP Extensions for DPC bit is set, this value ranges from 4 (RP PIO Header Log only) to 9 (RP PIO Header Log, RP PIO ImpSpec Log, 4 DWs of RP PIO TLP Prefix Log).
7	DPC_SOFTWARE_TRIGGERING_SUPPORTED. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports the ability for software to trigger DPC.
6	POISONED_TLP_EGRESS_BLOCKING_SUPPORTED. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports the ability to block the transmission of a poisoned TLP from its Egress Port.
5	RP_EXTENSIONS_FOR_DPC. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports a defined set of DPC Extensions that are specific to Root Ports.
4:0	DPC_INTR_MSG_NUM. Read-only. Reset: Fixed,00h. Indicates the MSI/MSI-X vector used for interrupts generated in association with any of the status bits in the DPC capability structure.

Bits	Description										
15:14	Reserved.										
13	DPC_SIG_SFW_STATUS. Read-write. Reset: 0. When ERR_COR Subclass Capable bit is set, indicates if the Downstream Port signaled with ERR_COR using an ECS SIG_SFW subclass, when DPC was triggered. This bit is sticky.										
12:8	RP_PIO_FIRST_ERROR_POINTER. Read-only. Description: If RP Extensions for DPC bit is set, indicates the bit position of the first error reported in the RP PIO Status register. This field is only valid if the indicated bit is also set. This field is sticky. If RP Extensions for DPC bit is clear, this field is Reserved.										
7	Reserved.										
6:5	DPC_TRIGGER_REASON_EXTENSION. Read-only. When DPC Trigger Status bit is set and DPC Trigger Reason field is 3, indicates why DPC has been triggered. This field is sticky. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Triggered due to a RP PIO error</td></tr> <tr> <td>1h</td><td>Triggered due to DPC Software Trigger bit being written with 1</td></tr> <tr> <td>3h-2h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Triggered due to a RP PIO error	1h	Triggered due to DPC Software Trigger bit being written with 1	3h-2h	Reserved.		
Value	Description										
0h	Triggered due to a RP PIO error										
1h	Triggered due to DPC Software Trigger bit being written with 1										
3h-2h	Reserved.										
4	DPC_RP_BUSY. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Description: If RP Extensions for DPC bit is set, when DPC Trigger Status bit is set, indicates if the Root Port is busy with internal activity that must complete before software is permitted to clear the DPC Trigger Status bit. If RP Extensions for DPC bit is clear, this bit is Reserved.										
3	DPC_INTERRUPT_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. When DPC Interrupt Enable bit is set, indicates if a DPC interrupt is pending internally in the Port. This bit is sticky.										
2:1	DPC_TRIGGER_REASON. Read-only. When DPC Trigger Status bit is set, indicates why DPC has been triggered. This field is sticky. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Triggered due to an unmasked uncorrectable error</td></tr> <tr> <td>1h</td><td>Triggered due to receiving an ERR_NONFATAL</td></tr> <tr> <td>2h</td><td>Triggered due to receiving an ERR_FATAL</td></tr> <tr> <td>3h</td><td>Triggered due to reason in DPC Trigger Reason Extension field</td></tr> </table>	Value	Description	0h	Triggered due to an unmasked uncorrectable error	1h	Triggered due to receiving an ERR_NONFATAL	2h	Triggered due to receiving an ERR_FATAL	3h	Triggered due to reason in DPC Trigger Reason Extension field
Value	Description										
0h	Triggered due to an unmasked uncorrectable error										
1h	Triggered due to receiving an ERR_NONFATAL										
2h	Triggered due to receiving an ERR_FATAL										
3h	Triggered due to reason in DPC Trigger Reason Extension field										
0	DPC_TRIGGER_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if DPC has been triggered. While this bit is set, the Port's Link remains in the Disabled state. This bit is sticky.										

BXXD0[1F1...2F1]x38A (PCIERCCFG::PCIE_DPC_ERROR_SOURCE_ID)

Read-only.

DPC Error Source ID register.

Bits	Description
31:19	Reserved.
18	MEM_CTO. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for a Memory Request Completion Timeout. This bit is sticky.
17	MEM_CA_CPL. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for a Memory Request received CA Completion. This bit is sticky.
16	MEM_UR_CPL. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for a Memory Request received UR Completion. This bit is sticky.
15:11	Reserved.
10	IO_CTO. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for an I/O Request Completion Timeout. This bit is sticky.
9	IO_CA_CPL. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for an I/O Request received CA Completion. This bit is sticky.
8	IO_UR_CPL. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for an I/O Request received UR Completion. This bit is sticky.
7:3	Reserved.
2	CFG_CTO. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for a Configuration Request Completion Timeout. This bit is sticky.
1	CFG_CA_CPL. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for a Configuration Request received CA Completion. This bit is sticky.
0	CFG_UR_CPL. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port can report a synchronous processor exception for a Configuration Request received UR Completion. This bit is sticky.

15:12 Reserved.

11:9 **MIN_TIME_IN_EI_SCALE**. Read-write. Reset: Fixed,2h. Indicates the scale used for the Min Time in EI Value.**ValidValues:**

Value	Description
0h	Value times 1 ns
1h	Value times 32 ns
2h	Value times 1,024 ns
3h	Value times 32,768 ns
4h	Value times 1,048,576 ns
5h	Value times 33,554,432 ns
7h-6h	Reserved.

8:0 **MIN_TIME_IN_EI_VAL**. Read-only. Reset: 000h. In combination with the Min Time in EI Scale value, indicates the minimum time the Port's receivers need to see Electrical Idle during receiver calibration.

BXXD0[1F1...2F1]x3D0 (PCIERCCFG::PCIE_ESM_CTRL)

Read-write. Reset: 0000h.

ESM Control register.

Bits	Description
15	ESM_ENABLED. Read-write. Reset: 0. 0=Normal Mode. 1=ESM Mode. Writes of 1 triggers the sequence that configures the Port to run in ESM mode. Writes of 0 have no effect, except when the bit is already set, in which case the resulting behavior is undefined.
14:8	ESM_GEN_4_DATA_RATE. Read-write. Reset: 00h. When ESM Enable bit is set, controls the data rate of the Link when speed changes negotiate to the Gen 4 data rate. The data rate equals (128 + the value in this field) x 100x10e6.
7	Reserved.
6:0	ESM_GEN_3_DATA_RATE. Read-write. Reset: 00h. When ESM Enable bit is set, controls the data rate of the Link when speed changes negotiate to the Gen 3 data rate. The data rate equals (64 + the value in this field) x 100x10e6.

Bits	Description
31	DLF_EXCHANGE_ENABLE. Read-write. Reset: 1. 0=Bypass DL_Feature negotiation. 1=Perform DL_Feature negotiation. Indicates if the Port will perform the Data Link Feature Exchange during Data Link Layer activation.
30:23	Reserved.
22:1	LOCAL_DLF_SUPPORTED_22_1. Read-write. Reset: Fixed,00_0000h. Indicates which Data Link Features the Port supports. This bit is the upper part of a field that is a bit vector that covers all supported features. If Data Link Feature Exchange Enable bit is set, the entire bit vector's value is sent in the Port's transmitted Data Link Feature DLLP.
0	LOCAL_DLF_SCALED_FLOW_CONTROL_SUPPORTED. Read-write. Reset: 1. Indicates which Data Link Features the Port supports. This bit is the lower part of a field that is a bit vector that covers all supported features: Bit 0 is Scaled Flow Control Supported. If Data Link Feature Exchange Enable bit is set, the entire bit vector's value is sent in the Port's transmitted Data Link Feature DLLP.

BXXD0[1F1...2F1]x408 (PCIERCCFG::DATA_LINK_FEATURE_STATUS)

Bits	Description
31	REMOTE_DLF_SUPPORTED_VALID. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the Port received a Data Link Feature DLLP during DL_Feature negotiation, containing meaningful Remote Data Link Feature Supported and Remote Data Link Feature Ack fields. The bit is cleared when the Data Link Layer enters the DL_Inactive state.
30:23	Reserved.
22:0	REMOTE_DLF_SUPPORTED. Read-only. Reset: 00_0000h. Captures which Data Link Features the Remote Port supports. This field is a bit vector that covers all supported features: Bit 0 is Scaled Flow Control Supported. If Data Link Feature Exchange Enable bit is set, this field's value is from the Port's received Data Link Feature DLLP.

Bits	Description
7:4	LANE_USP_16GT_TX_PRESET. Read-write. Reset: Fh. Description: Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 16.0 GT/s . (Upstream Ports only) captures the transmitter preset value that the Upstream Port received from the other side for initial operation at 16.0 GT/s.
3:0	LANE_DSP_16GT_TX_PRESET. Read-write. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 16.0 GT/s . For Upstream Ports that don't support crosslinks, this bit is Reserved.

BXXD0[1F1...2F1]x440 (PCIERCCFG::PCIE_MARGINING_ENH_CAP_LIST)

Read-only.

Margining Extended Capability header.

_func[6:0]_instPCIE0_nbio0_aliasHOST; BXXD01F[7:1]x440; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]_func[6:0]_instPCIE0_nbio1_aliasHOST; BXXD01F[7:1]x440; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]_func7_instPCIE3_nbio0_aliasHOST; BXXD02F1x440; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]_func7_instPCIE3_nbio1_aliasHOST; BXXD02F1x440; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]_func[8:0]_instPCIE0_nbio0_aliasSMN; NBIO0PCIECORE0P[8:0]CFGx00000440; NBIO0PCIECORE0P[8:0]CFG=1A30_[8:0]000h_func[8:0]_instPCIE1_nbio0_aliasSMN; NBIO0PCIECORE1P[8:0]CFGx00000440; NBIO0PCIECORE1P[8:0]CFG=1A70_[8:0]000h_func[8:0]_instPCIE2_nbio0_aliasSMN; NBIO0PCIECORE2P[8:0]CFGx00000440; NBIO0PCIECORE2P[8:0]CFG=1A80_[8:0]000h_func[8:0]_instPCIE3_nbio0_aliasSMN; NBIO0PCIECORE3P[8:0]CFGx00000440; NBIO0PCIECORE3P[8:0]CFG=1A40_[8:0]000h_func[3:0]_instPCIE4_nbio0_aliasSMN; NBIO0PCIECORE4P[3:0]CFGx00000440; NBIO0PCIECORE4P[3:0]CFG=1AB0_[3:0]000h_func[8:0]_instPCIE0_nbio1_aliasSMN; NBIO1PCIECORE0P[8:0]CFGx00000440; NBIO1PCIECORE0P[8:0]CFG=1A50_[8:0]000h_func[8:0]_instPCIE1_nbio1_aliasSMN; NBIO1PCIECORE1P[8:0]CFGx00000440; NBIO1PCIECORE1P[8:0]CFG=1A90_[8:0]000h_func[8:0]_instPCIE2_nbio1_aliasSMN; NBIO1PCIECORE2P[8:0]CFGx00000440; NBIO1PCIECORE2P[8:0]CFG=1AA0_[8:0]000h_func[8:0]_instPCIE3_nbio1_aliasSMN; NBIO1PCIECORE3P[8:0]CFGx00000440; NBIO1PCIECORE3P[8:0]CFG=1A60_[8:0]000h_func[3:0]_instPCIE4_nbio1_aliasSMN; NBIO1PCIECORE4P[3:0]CFGx00000440; NBIO1PCIECORE4P[3:0]CFG=1AD0_[3:0]000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 488h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0027h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD0[1F1...2F1]x444 (PCIERCCFG::MARGINING_PORT_CAP)

Read-only. Reset: 0000h.

Margining Port Capabilities register.

Bits	Description
15:8	MARGIN_PAYLOAD. Read-write. Reset: 9Ch. When Usage Model bit is clear, controls the value sent in the Margin Payload field of transmitted Control SKP ordered sets. The field returns to its default value when the Port goes DL_Down.
7	Reserved.

6	USAGE_MODEL. Read-write. Reset: 0. 0=Lane Margining at Receiver. Controls the value sent in the Usage Model bit of transmitted Control SKP ordered sets. The field is cleared when the Port goes DL_Down.
5:3	MARGIN_TYPE. Read-write. Reset: 7h. When Usage Model bit is clear, controls the value sent in the Margin Type field of transmitted Control SKP ordered sets. The field is cleared when the Port goes DL_Down.
2:0	RECEIVER_NUMBER. Read-write. Reset: 0h. When Usage Model bit is clear, controls the value sent in the Receiver Number field of transmitted Control SKP ordered sets. The field is cleared when the Port goes DL_Down.

BXXD01F1x44A...BXXD02F1x486 (PCIERCCFG::MARGINING_LANE_STATUS)

Read-only. Reset: 0000h.

Lane n Margining Lane Status register.

Bits	Description
15:8	MARGIN_PAYLOAD_STATUS. Read-only. Reset: 00h. Captures the value from the Margin Payload field of received Control SKP ordered sets that have the Usage Model bit clear. The field is cleared when the Port goes DL_Down.
7	Reserved.

6	USAGE_MODEL_STATUS . Read-only. Reset: 0. 0=Lane Margining at Receiver. Captures the value from the Usage Model bit of received Control SKP ordered sets. The field is cleared when the Port goes DL_Down.
5:3	MARGIN_TYPE_STATUS . Read-only. Reset: 0h. Captures the value from the Margin Type field of received Control SKP ordered sets that have the Usage Model bit clear. The field is cleared when the Port goes DL_Down.
2:0	RECEIVER_NUMBER_STATUS . Read-only. Reset: 0h. Captures the value from the Receiver Number field of received Control SKP ordered sets that have the Usage Model bit clear. The field is cleared when the Port goes DL_Down.

BXXD01F1x4A4...BXXD02F1x4B3 (PCIERCCFG::ESM_LANE_EQUALIZATION_CNTL_20GT)

Read-write. Reset: Ffh.

ESM Lane n Equalization Control for 20.0 GT/s register.

Bits	Description
7:4	ESM_LANE_USP_20GT_TX_PRESET. Read-write. Reset: Fh. Description: Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 20.0 GT/s . (Upstream Ports only) captures the transmitter preset value that the Upstream Port received from the other side for initial operation at 20.0 GT/s.
3:0	ESM_LANE_DSP_20GT_TX_PRESET. Read-write. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 20.0 GT/s . For Upstream Ports that don't support crosslinks, this bit is Reserved.

BXXD01F1x4B4...BXXD02F1x4C3 (PCIERCCFG::ESM_LANE_EQUALIZATION_CNTL_25GT)

Read-write. Reset: Ffh.

ESM Lane n Equalization Control for 25.0 [GT/s](#) register.

Bits	Description
7:4	ESM_LANE_USP_25GT_TX_PRESET. Read-write. Reset: Fh. Description: Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 25.0 GT/s . (Upstream Ports only) captures the transmitter preset value that the Upstream Port received from the other side for initial operation at 25.0 GT/s.
3:0	ESM_LANE_DSP_25GT_TX_PRESET. Read-write. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 25.0 GT/s . For Upstream Ports that don't support crosslinks, this bit is Reserved.

BXXD0[1F1...2F1]x4D0 (PCIERCCFG::PCIE_NPEM_ENH_CAP_LIST)

Read-only.

Native **PCIe** Enclosure Management Extended Capability header.`_func[6:0]_instPCIE0_nbio0_aliasHOST; BXXD01F[7:1]x4D0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]``_func[6:0]_instPCIE0_nbio1_aliasHOST; BXXD01F[7:1]x4D0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]``_func7_instPCIE3_nbio0_aliasHOST; BXXD02F1x4D0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]``_func7_instPCIE3_nbio1_aliasHOST; BXXD02F1x4D0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]``_func[8:0]_instPCIE0_nbio0_aliasSMN; NBIO0PCIECORE0P[8:0]CFGx000004D0; NBIO0PCIECORE0P[8:0]CFG=1A30_[8:0]000h``_func[8:0]_instPCIE1_nbio0_aliasSMN; NBIO0PCIECORE1P[8:0]CFGx000004D0; NBIO0PCIECORE1P[8:0]CFG=1A70_[8:0]000h``_func[8:0]_instPCIE2_nbio0_aliasSMN; NBIO0PCIECORE2P[8:0]CFGx000004D0; NBIO0PCIECORE2P[8:0]CFG=1A80_[8:0]000h``_func[8:0]_instPCIE3_nbio0_aliasSMN; NBIO0PCIECORE3P[8:0]CFGx000004D0; NBIO0PCIECORE3P[8:0]CFG=1A40_[8:0]000h``_func[3:0]_instPCIE4_nbio0_aliasSMN; NBIO0PCIECORE4P[3:0]CFGx000004D0; NBIO0PCIECORE4P[3:0]CFG=1AB0_[3:0]000h``_func[8:0]_instPCIE0_nbio1_aliasSMN; NBIO1PCIECORE0P[8:0]CFGx000004D0; NBIO1PCIECORE0P[8:0]CFG=1A50_[8:0]000h``_func[8:0]_instPCIE1_nbio1_aliasSMN; NBIO1PCIECORE1P[8:0]CFGx000004D0; NBIO1PCIECORE1P[8:0]CFG=1A90_[8:0]000h``_func[8:0]_instPCIE2_nbio1_aliasSMN; NBIO1PCIECORE2P[8:0]CFGx000004D0; NBIO1PCIECORE2P[8:0]CFG=1AA0_[8:0]000h``_func[8:0]_instPCIE3_nbio1_aliasSMN; NBIO1PCIECORE3P[8:0]CFGx000004D0; NBIO1PCIECORE3P[8:0]CFG=1A60_[8:0]000h``_func[3:0]_instPCIE4_nbio1_aliasSMN; NBIO1PCIECORE4P[3:0]CFGx000004D0; NBIO1PCIECORE4P[3:0]CFG=1AD0_[3:0]000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 500h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0029h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD0[1F1...2F1]x4D4 (PCIERCCFG::NPEM_CAP)

Read-write. Reset: 0000_0000h.

The NPEM Capability register identifies Port specific capabilities.

Bits	Description
31:24	ENCLOSURE_SPECIFIC_CAPS. Read-write. Reset: 00h. Indicates if enclosure-specific capabilities are implemented for this Port. This field is a bit vector that covers all supported capabilities.
23:12	Reserved.
11	NPEM_DISABLED_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM Disabled state indication is implemented for this Port.
10	NPEM_INV_DEVICE_TYPE_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM Invalid Device Type state indication is implemented for this Port.
9	NPEM_FAILED_ARRAY_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM In A Failed Array state indication is implemented for this Port.
8	NPEM_CRITICAL_ARRAY_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM In A Critical Array state indication is implemented for this Port.
7	NPEM_HOT_SPARE_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM Hot Spare state indication is implemented for this Port.
6	NPEM_PFA_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM PFA state indication is implemented for this Port.
5	NPEM_REBUILD_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates NPEM Rebuild state indication is implemented for this Port.
4	NPEM_FAIL_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM Fail state indication is implemented for this Port.
3	NPEM_LOCATE_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM Locate state indication is implemented for this Port.
2	NPEM_OK_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM OK state indication is implemented for this Port.
1	NPEM_RESET_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if NPEM Reset mechanism is implemented for this Port.
0	NPEM_CAPABLE. Read-write. Reset: 0. 0=Not Supported. 1=Supported. Indicates if Native PCIe Enclosure Management is implemented for this Port.

BXXD0[1F1...2F1]x4D8 (PCIERCCFG::NPEM_CNTL)

Read-write. Reset: 0000_0000h.

The NPEM Control register controls port specific parameters.

Bits	Description
31:24	ENCLOSURE_SPECIFIC_CNTL . Read-write. Reset: 00h. If enclosure-specific capabilities are supported, writes set the enclosure-specific control to the written state. Reads return the last written value. This field is a bit vector that covers all supported controls.
23:12	Reserved.
11	NPEM_DISABLED_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM Disabled state indication is supported, writes set the NPEM Disabled Indicator to the written state. Reads return the last written value.
10	NPEM_INV_DEVICE_TYPE_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM Invalid Device Type state indication is supported, writes set the NPEM Invalid Device Type Indicator to the written state. Reads return the last written value.
9	NPEM_FAILED_ARRAY_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM In A Failed Array state indication is supported, writes set the NPEM In A Failed Array Indicator to the written state. Reads return the last written value.
8	NPEM_CRITICAL_ARRAY_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM In A Critical Array state indication is supported, writes set the NPEM In A Critical Array Indicator to the written state. Reads return the last written value.
7	NPEM_HOT_SPARE_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM Hot Spare state indication is supported, writes set the NPEM Hot Spare Indicator to the written state. Reads return the last written value.
6	NPEM_PFA_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM PFA state indication is supported, writes set the NPEM PFA Indicator to the written state. Reads return the last written value.
5	NPEM_REBUILD_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM Rebuild state indication is supported, writes set the NPEM Rebuild Indicator to the written state. Reads return the last written value.
4	NPEM_FAIL_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM Fail state indication is supported, writes set the NPEM Fail Indicator to the written state. Reads return the last written value.
3	NPEM_LOCATE_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM Locate state indication is supported, writes set the NPEM Locate Indicator to the written state. Reads return the last written value.
2	NPEM_OK_CONTROL . Read-write. Reset: 0. 0=Off. 1=On. If NPEM OK state indication is supported, writes set the NPEM OK Indicator to the written state. Reads return the last written value.
1	NPEM_INITIATE_RESET . Read-write. Reset: 0. 0=Disable. 1=Enable. If NPEM Reset mechanism is supported, a write of 1 to this bit initiates NPEM Reset to the Port. Reads always return 0.
0	NPEM_ENABLE . Read-write. Reset: 0. 0=Disable. 1=Enable. If Native PCIe Enclosure Management is supported, controls if the Port enables NPEM features.

BXXD0[1F1...2F1]x4DC (PCIERCCFG::NPEM_STATUS)

Bits	Description
31:16	Reserved.
15:11	MODIFIED_TS_RESERVED_USAGE_MODES. Read-only. Reset: Fixed,00h. Reserved.
10	MODIFIED_TS_USAGE_MODE2_SUPPORTED. Read-only. 0=Not Supported. 1=Supported. Indicates if this port supports negotiating to use alternate Training Set protocols.
9	MODIFIED_TS_USAGE_MODE1_SUPPORTED. Read-only. 0=Not Supported. 1=Supported. Indicates if this port supports sending and receiving vendor specific Training Set Messages.
8	MODIFIED_TS_USAGE_MODE0_SUPPORTED. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if this port supports standard PCI Express Training Set usage mode.
7:2	Reserved.
1	NO_EQ_NEEDED_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization is needed.
0	EQ_BYPASS_TO_HIGHEST_RATE_SUPPORTED. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization for link speeds other than the highest common supported link speed are bypassed.

BXXD0[1F1...2F1]x508 (PCIERCCFG::LINK_CNTL_32GT)

Read-write. Reset: 0000_0000h.

The 32.0 [GT/s](#) Control register controls Physical Layer 32.0 GT/s specific parameters.[_func\[6:0\]_instPCIE0_nbio0_aliasHOST](#); BXXD01F[7:1]x508; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM][_func\[6:0\]_instPCIE0_nbio1_aliasHOST](#); BXXD01F[7:1]x508; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM][_func7_instPCIE3_nbio0_aliasHOST](#); BXXD02F1x508; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM][_func7_instPCIE3_nbio1_aliasHOST](#); BXXD02F1x508; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM][_func\[8:0\]_instPCIE0_nbio0_aliasSMN](#); NBIO0PCIECORE0P[8:0]CFGx00000508; NBIO0PCIECORE0P[8:0]CFG=1A30_[8:0]000h[_func\[8:0\]_instPCIE1_nbio0_aliasSMN](#); NBIO0PCIECORE1P[8:0]CFGx00000508; NBIO0PCIECORE1P[8:0]CFG=1A70_[8:0]000h[_func\[8:0\]_instPCIE2_nbio0_aliasSMN](#); NBIO0PCIECORE2P[8:0]CFGx00000508; NBIO0PCIECORE2P[8:0]CFG=1A80_[8:0]000h[_func\[8:0\]_instPCIE3_nbio0_aliasSMN](#); NBIO0PCIECORE3P[8:0]CFGx00000508; NBIO0PCIECORE3P[8:0]CFG=1A40_[8:0]000h[_func\[3:0\]_instPCIE4_nbio0_aliasSMN](#); NBIO0PCIECORE4P[3:0]CFGx00000508; NBIO0PCIECORE4P[3:0]CFG=1AB0_[3:0]000h[_func\[8:0\]_instPCIE0_nbio1_aliasSMN](#); NBIO1PCIECORE0P[8:0]CFGx00000508; NBIO1PCIECORE0P[8:0]CFG=1A50_[8:0]000h[_func\[8:0\]_instPCIE1_nbio1_aliasSMN](#); NBIO1PCIECORE1P[8:0]CFGx00000508; NBIO1PCIECORE1P[8:0]CFG=1A90_[8:0]000h[_func\[8:0\]_instPCIE2_nbio1_aliasSMN](#); NBIO1PCIECORE2P[8:0]CFGx00000508; NBIO1PCIECORE2P[8:0]CFG=1AA0_[8:0]000h[_func\[8:0\]_instPCIE3_nbio1_aliasSMN](#); NBIO1PCIECORE3P[8:0]CFGx00000508; NBIO1PCIECORE3P[8:0]CFG=1A60_[8:0]000h[_func\[3:0\]_instPCIE4_nbio1_aliasSMN](#); NBIO1PCIECORE4P[3:0]CFGx00000508; NBIO1PCIECORE4P[3:0]CFG=1AD0_[3:0]000h

Bits	Description
31:11	Reserved.
10:8	MODIFIED_TS_USAGE_MODE_SEL. Read-write. Reset: 0h. Description: (Downstream Ports only) Configures the Training Set usage mode by selecting one of the supported Training Set usage modes. This bit is sticky. For Upstream Ports, this bit is Reserved.
7:2	Reserved.
1	NO_EQ_NEEDED_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls a port's ability to advertise that link equalization is needed. This bit is sticky.
0	EQ_BYPASS_TO_HIGHEST_RATE_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls a port's ability to advertise that link equalization for link speeds other than the highest common supported link speed is bypassed. This bit is sticky.

BXXD0[1F1...2F1]x50C (PCIERCCFG::LINK_STATUS_32GT)

The 32.0 [GT/s](#) Status register provides information about Physical Layer 32.0 GT/s specific parameters.

Bits	Description
31:11	Reserved.
10	NO_EQ_NEEDED_RECEIVED. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received, containing the No Equalization Needed bit set. Also indicates if a non-modified TS1 or non-modified TS2 was received, containing the No Equalization Needed encoding.
9	TRANSMITTER_PRECODE_REQUEST. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the Port will request the transmitter to use Precoding by setting the Precoding Request bit in TS1s/TS2s transmitted prior to entry to Recovery.Speed.
8	TRANSMITTER_PRECODING_ON. Read-only. Reset: 0. Indicates whether the receiver asked this transmitter to enable Precoding.
7:6	RECEIVED_ENHANCED_LINK_BEHAVIOR_CNTL. Read-only. Reset: 0h. Contains the Enhanced Link Behavior Control bits from the most recent TS1 or TS2 received in the Polling or Configuration states.
5	MODIFIED_TS_RECEIVED. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received.
4	LINK_EQUALIZATION_REQUEST_32GT. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 32.0 GT/s link equalization to be performed. This bit is sticky.
3	EQUALIZATION_PHASE3_SUCCESS_32GT. Read-only. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
2	EQUALIZATION_PHASE2_SUCCESS_32GT. Read-only. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
1	EQUALIZATION_PHASE1_SUCCESS_32GT. Read-only. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
0	EQUALIZATION_COMPLETE_32GT. Read-only. 0=Not Detected. 1=Detected. Indicates if the 32.0 GT/s Transmitter Equalization procedure has completed. This bit is sticky.

BXXD0[1F1...2F1]x510 (PCIERCCFG::RECEIVED_MODIFIED_TS_DATA1)

Bits	Description
7:4	LANE_USP_32GT_TX_PRESET. Read-write. Reset: Fh. Description: Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 32.0 GT/s . (Upstream Ports only) captures the transmitter preset value that the Upstream Port received from the other side for initial operation at 32.0 GT/s.
3:0	LANE_DSP_32GT_TX_PRESET. Read-write. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 32.0 GT/s . For Upstream Ports that don't support crosslinks, this bit is Reserved.

BXXD0[1F1...2F1]x530 (PCIERCCFG::PCIE_AP_ENH_CAP_LIST)

Read-only.

Alternate Protocol Extended Capability header.

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 560h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,002Bh. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD0[1F1...2F1]x534 (PCIERCCFG::AP_CAP)

Read-only. Reset: 0000_0001h.

The Alternate Protocol Capabilities register identifies Alternate Protocol specific capabilities.

Bits	Description
31:9	Reserved.
8	AP_NEGOTIATION_GLOBAL_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls a port's ability to perform Alternate Protocol negotiation.
7:0	AP_INDEX_SELECT. Read-write. Reset: 00h. Controls which lane and which Alternate Protocol for that lane is visible in the Alternate Protocol Data registers.

BXXD0[1F1...2F1]x53C (PCIERCCFG::AP_DATA1)

Read-only.

The Alternate Protocol Data 1 register reports the values associated with the selected Alternate Protocol.

_func[6:0]_instPCIE0_nbio0_aliasHOST; BXXD01F[7:1]x53C; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]_func[6:0]_instPCIE0_nbio1_aliasHOST; BXXD01F[7:1]x53C; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]_func7_instPCIE3_nbio0_aliasHOST; BXXD02F1x53C; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]_func7_instPCIE3_nbio1_aliasHOST; BXXD02F1x53C; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]_func[8:0]_instPCIE0_nbio0_aliasSMN; NBIO0PCIECORE0P[8:0]CFGx0000053C; NBIO0PCIECORE0P[8:0]CFG=1A30_[8:0]000h_func[8:0]_instPCIE1_nbio0_aliasSMN; NBIO0PCIECORE1P[8:0]CFGx0000053C; NBIO0PCIECORE1P[8:0]CFG=1A70_[8:0]000h_func[8:0]_instPCIE2_nbio0_aliasSMN; NBIO0PCIECORE2P[8:0]CFGx0000053C; NBIO0PCIECORE2P[8:0]CFG=1A80_[8:0]000h_func[8:0]_instPCIE3_nbio0_aliasSMN; NBIO0PCIECORE3P[8:0]CFGx0000053C; NBIO0PCIECORE3P[8:0]CFG=1A40_[8:0]000h_func[3:0]_instPCIE4_nbio0_aliasSMN; NBIO0PCIECORE4P[3:0]CFGx0000053C; NBIO0PCIECORE4P[3:0]CFG=1AB0_[3:0]000h_func[8:0]_instPCIE0_nbio1_aliasSMN; NBIO1PCIECORE0P[8:0]CFGx0000053C; NBIO1PCIECORE0P[8:0]CFG=1A50_[8:0]000h_func[8:0]_instPCIE1_nbio1_aliasSMN; NBIO1PCIECORE1P[8:0]CFGx0000053C; NBIO1PCIECORE1P[8:0]CFG=1A90_[8:0]000h_func[8:0]_instPCIE2_nbio1_aliasSMN; NBIO1PCIECORE2P[8:0]CFGx0000053C; NBIO1PCIECORE2P[8:0]CFG=1AA0_[8:0]000h_func[8:0]_instPCIE3_nbio1_aliasSMN; NBIO1PCIECORE3P[8:0]CFGx0000053C; NBIO1PCIECORE3P[8:0]CFG=1A60_[8:0]000h_func[3:0]_instPCIE4_nbio1_aliasSMN; NBIO1PCIECORE4P[3:0]CFGx0000053C; NBIO1PCIECORE4P[3:0]CFG=1AD0_[3:0]000h

Bits	Description
31:16	AP_VENDOR_ID. Read-only. Captures the Vendor ID associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.
15:5	AP_DETAILS. Read-only. Captures the Alternate Protocol Details associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.
4:3	Reserved.
2:0	AP_USAGE_INFORMATION. Read-only. Captures the Modified TS Usage associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.

BXXD0[1F1...2F1]x540 (PCIERCCFG::AP_DATA2)

Read-only.

The Alternate Protocol Data 2 register reports the values associated with the selected Alternate Protocol.

`_func[6:0]_instPCIE0_nbio0_aliasHOST; BXXD01F[7:1]x540; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]``_func[6:0]_instPCIE0_nbio1_aliasHOST; BXXD01F[7:1]x540; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]``_func7_instPCIE3_nbio0_aliasHOST; BXXD02F1x540; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]``_func7_instPCIE3_nbio1_aliasHOST; BXXD02F1x540; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]``_func[8:0]_instPCIE0_nbio0_aliasSMN; NBIO0PCIECORE0P[8:0]CFGx00000540; NBIO0PCIECORE0P[8:0]CFG=1A30_[8:0]000h``_func[8:0]_instPCIE1_nbio0_aliasSMN; NBIO0PCIECORE1P[8:0]CFGx00000540; NBIO0PCIECORE1P[8:0]CFG=1A70_[8:0]000h``_func[8:0]_instPCIE2_nbio0_aliasSMN; NBIO0PCIECORE2P[8:0]CFGx00000540; NBIO0PCIECORE2P[8:0]CFG=1A80_[8:0]000h``_func[8:0]_instPCIE3_nbio0_aliasSMN; NBIO0PCIECORE3P[8:0]CFGx00000540; NBIO0PCIECORE3P[8:0]CFG=1A40_[8:0]000h``_func[3:0]_instPCIE4_nbio0_aliasSMN; NBIO0PCIECORE4P[3:0]CFGx00000540; NBIO0PCIECORE4P[3:0]CFG=1AB0_[3:0]000h``_func[8:0]_instPCIE0_nbio1_aliasSMN; NBIO1PCIECORE0P[8:0]CFGx00000540; NBIO1PCIECORE0P[8:0]CFG=1A50_[8:0]000h``_func[8:0]_instPCIE1_nbio1_aliasSMN; NBIO1PCIECORE1P[8:0]CFGx00000540; NBIO1PCIECORE1P[8:0]CFG=1A90_[8:0]000h``_func[8:0]_instPCIE2_nbio1_aliasSMN; NBIO1PCIECORE2P[8:0]CFGx00000540; NBIO1PCIECORE2P[8:0]CFG=1AA0_[8:0]000h``_func[8:0]_instPCIE3_nbio1_aliasSMN; NBIO1PCIECORE3P[8:0]CFGx00000540; NBIO1PCIECORE3P[8:0]CFG=1A60_[8:0]000h``_func[3:0]_instPCIE4_nbio1_aliasSMN; NBIO1PCIECORE4P[3:0]CFGx00000540; NBIO1PCIECORE4P[3:0]CFG=1AD0_[3:0]000h`**Bits Description**

31:24 Reserved.

23:0 **MODIFIED_TS_INFORMATION_2**. Read-only. Captures the Modified TS Information 2 associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.**BXXD0[1F1...2F1]x544 (PCIERCCFG::AP_SELECTIVE_ENABLE_MASK)**

Read-write. Reset: 0000_0003h.

Alternate Protocol Selective Enable Mask register.

Bits	Description
31	VALID. Read-only. Reset: 1. 0=Values not Ready. 1=Values are Valid. Indicates if the time values reported in this capability structure are valid.
30:24	Reserved.
23:12	DL_UP_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following the Downstream Port reporting Data Link Layer Active is set. Encodings are the same as for RESET_TIME.
11:0	RESET_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following a conventional reset. The lower nine bits indicate the value. The upper three bits indicate the scale used for the value, encoded as: 0 = 1 ns; 1 = 32 ns; 2 = 1024 ns; 3 = 32768 ns; 4 = 1048576 ns; 5 = 33554432 ns.

Bits	Description
15:10	Reserved.
9	RETIMER2_PRESENT . Read-write. Reset: 0. When set, indicates presence of retimer2.
8	RETIMER1_PRESENT . Read-write. Reset: 0. When set, indicates presence of retimer1.
7:5	Reserved.
4	DRIFT_BUFFER_ENABLE . Read-write. Reset: 0. Drift_Buffer_Enable: When set, enables drift buffer (instead of elastic buffer) if there is a common reference clock.
3	CXL_SYNC_HDR_BYPASS_EN . Read-write. Reset: 0. When set, enables bypass of the 2-bit sync header by the Flex Bus physical layer when operating in Flex Bus mode. This is a performance optimization.
2	MEM_EN . Read-write. Reset: 0. When set, enables CXL™.mem protocol operation when in Flex Bus.AL mode.
1	IO_EN . Read-only. Reset: Fixed,1. When set, enables CXL™.io protocol operation when in Flex Bus.AL mode.
0	CACHE_EN . Read-write. Reset: 0. Enables CXL™ cache protocol operation when in Flex Bus AL mode.

Bits	Description
15:11	Reserved.
10	CXL_UNEXPECTED_PROTOCOL_ID_DROPPED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. When set, indicates that the physical layer dropped a flit with an unexpected protocol ID that is not due to an Uncorrectable protocol ID framing error. Write 1 to clear.
9	CXL_UNCORRECTABLE_PROTOCOL_ID_FRAMING_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if CXL™ Uncorrectable Protocol ID Framing error has occurred. Write 1 to clear.
8	CXL_CORRECTABLE_PROTOCOL_ID_FRAMING_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if CXL™ Correctable Protocol ID Framing error has occurred. Write 1 to clear.
7:5	Reserved.
4	DRIFT_BUFFER_ENABLED. Read-only. When set, indicates that the physical layer has enabled its drift buffer instead of its elastic buffer.
3	CXL_SYNC_HDR_BYPASS_ENABLED. Read-only. When set, indicates that bypass of the 2-bit sync header by the Flex Bus sphysical layer has been enabled while operating in Flex Bus mode as a result of PCIe alternate protocol negotiation for Flex Bus.
2	MEM_ENABLED. Read-only. When set,, indicates that CXL™.mem protocol operation has been enabled as a result of the PCIe alternate protocol negotiation for Flex Bus.
1	IO_ENABLED. Read-only. When set, indicates that CXL™.io protocol operation has been enabled as a result of PCIe alternate protocol negotiation for Flex Bus.
0	CACHE_ENABLED. Read-only. When set indicates that CXL™.cache protocol operation has been enabled as a result of PCIe alternate protocol negotiation for Flex Bus.

Bits	Description										
15:10	Reserved.										
9	SFI_DRS_TRIGGER . Write-only. Reset: 0. When SFI DRS Mask bit is clear, writes of 1 to this bit trigger the Downstream Port to behave as if a DRS Message was received; otherwise, writes to this bit have no effect. Reads always return 0.										
8	SFI_DRS_SIGNALING_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function generates an ERR_COR Message on a SFI DRS Message received event.										
7	SFI_DRS_MASK . Read-write. Reset: 0. 0=Report actual DRS Message received status in Link Status 2. 1=0. Controls the value returned in the DRS Message Received bit.										
6	SFI_HPS_SUPPRESS . Read-write. Reset: 0. 0=Report actual Hot-Plug Surprise capability in Slot Cap. 1=0. Controls the value returned in the Hot-Plug Surprise bit.										
5:4	SFI_DPF_CONTROL . Read-write. Reset: 0h. Controls which TLPs targeting components downstream of the port will be handled by the port as if the link was DL_Down. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>None</td></tr> <tr> <td>1h</td><td>All Requests</td></tr> <tr> <td>2h</td><td>Only Configuration Requests</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	None	1h	All Requests	2h	Only Configuration Requests	3h	Reserved.
Value	Description										
0h	None										
1h	All Requests										
2h	Only Configuration Requests										
3h	Reserved.										
3	SFI_DLL_STATE_CHANGED_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function generates an ERR_COR Message on a SFI Data Link Layer link state changed event.										
2	SFI_OOB_PD_CHANGED_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. If SFI OOB PD Capability is supported, controls if the function generates an ERR_COR Message on a SFI out-of-band presence detect changed event.										
1	SFI_DLL_STATE_MASK . Read-write. Reset: 0. 0=Report actual Data Link Layer link state in Link Status register. 1=Report 0 in Link Status Register. Controls the value returned in the Data Link Layer Link Active bit.										
0	SFI_PD_STATE_MASK . Read-write. Reset: 0. 0=Report actual presence detect state in Slot Status register. 1=Report 0 in Slot Status Register. Controls the value returned in the Presence Detect State bit.										

BXXD0[1F1...2F1]x5E8 (PCIERCCFG::SFI_STATUS)

System Firmware Intermediary Status register.

_func[6:0]_instPCIE0_nbio0_aliasHOST; BXXD01F[7:1]x5E8; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]

Bits	Description
15:6	Reserved.
5	SFI_DRS_RECEIVED. Read-write. Reset: 0. 0=Not Detected. 1=Detected. When DRS Supported bit is set, indicates if the Port has received a DRS Message.
4	SFI_DLL_STATE_CHANGED. Read-write. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the value reported in the SFF DLL State bit is changed.
3	SFI_DLL_STATE. Read-only. 0=Not DL_Active state. 1=DL_Active state. If Data Link Layer Link Active Capability is supported, always indicates the true status of the Data Link Control and Management State Machine even if DL state is masked.
2	SFI_OOB_PD_CHANGED. Read-write. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the value reported in the SFI OOB PD State bit is changed.
1	SFI_OOB_PD_STATE. Read-only. Reset: 0. 0=Adapter not Present. 1=Adapter Present. Indicates the out-of-band presence detect state of an adapter in the slot, regardless of the in-band presence detect state.
0	SFI_PD_STATE. Read-only. Reset: 0. 0=Adapter not Present. 1=Adapter Present. Always indicates the true presence detect state of an adapter in the slot, even if masking for Presence Detect is enabled.

BXXD0[1F1...2F1]x5EC (PCIERCCFG::SFI_CAM_ADDRESS)

Bits	Description
31:28	Reserved.
27:0	SFI_CAM_ADDRESS. Read-write. Controls the target address for the Configuration request generated by CAM.

BXXD0[1F1...2F1]x5F0 (PCIERCCFG::SFI_CAM_DATA)

Read-write.

System Firmware Intermediary CAM Address register.

`_func[6:0]_instPCIE0_nbio0_aliasHOST; BXXD01F[7:1]x5F0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]``_func[6:0]_instPCIE0_nbio1_aliasHOST; BXXD01F[7:1]x5F0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]``_func7_instPCIE3_nbio0_aliasHOST; BXXD02F1x5F0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio0_aliasSMN[NB_BUS_NUM]``_func7_instPCIE3_nbio1_aliasHOST; BXXD02F1x5F0; BXX=IOHC::NB_BUS_NUM_CNTL_nbio1_aliasSMN[NB_BUS_NUM]``_func[8:0]_instPCIE0_nbio0_aliasSMN; NBIO0PCIECORE0P[8:0]CFGx000005F0; NBIO0PCIECORE0P[8:0]CFG=1A30_[8:0]000h``_func[8:0]_instPCIE1_nbio0_aliasSMN; NBIO0PCIECORE1P[8:0]CFGx000005F0; NBIO0PCIECORE1P[8:0]CFG=1A70_[8:0]000h``_func[8:0]_instPCIE2_nbio0_aliasSMN; NBIO0PCIECORE2P[8:0]CFGx000005F0; NBIO0PCIECORE2P[8:0]CFG=1A80_[8:0]000h``_func[8:0]_instPCIE3_nbio0_aliasSMN; NBIO0PCIECORE3P[8:0]CFGx000005F0; NBIO0PCIECORE3P[8:0]CFG=1A40_[8:0]000h``_func[3:0]_instPCIE4_nbio0_aliasSMN; NBIO0PCIECORE4P[3:0]CFGx000005F0; NBIO0PCIECORE4P[3:0]CFG=1AB0_[3:0]000h``_func[8:0]_instPCIE0_nbio1_aliasSMN; NBIO1PCIECORE0P[8:0]CFGx000005F0; NBIO1PCIECORE0P[8:0]CFG=1A50_[8:0]000h``_func[8:0]_instPCIE1_nbio1_aliasSMN; NBIO1PCIECORE1P[8:0]CFGx000005F0; NBIO1PCIECORE1P[8:0]CFG=1A90_[8:0]000h``_func[8:0]_instPCIE2_nbio1_aliasSMN; NBIO1PCIECORE2P[8:0]CFGx000005F0; NBIO1PCIECORE2P[8:0]CFG=1AA0_[8:0]000h``_func[8:0]_instPCIE3_nbio1_aliasSMN; NBIO1PCIECORE3P[8:0]CFGx000005F0; NBIO1PCIECORE3P[8:0]CFG=1A60_[8:0]000h``_func[3:0]_instPCIE4_nbio1_aliasSMN; NBIO1PCIECORE4P[3:0]CFGx000005F0; NBIO1PCIECORE4P[3:0]CFG=1AD0_[3:0]000h`**Bits Description**

31:0	SFI_CAM_DATA. Read-write. Reads of this register cause a Configuration Read request to be generated by CAM. Writes of this register cause a Configuration Write request to be generated by CAM, using the value written to this register. For both types of Configuration request, the target address is provided by the value in the SFI_CAM_ADDRESS register.
------	--

BXXD0[1F1...2F1]x5F4 (PCIERCCFG::PCIE_DVSEC_GPF_ENH_CAP_LIST)

Read-only.

Bits	Description
31:1	Reserved.
0	TX_DUMMY_REG. Read-write. Reset: 0. This register was added to ensure that the TX Tile bifplr verilog file would have at least 1 register in it to prevent synthesis flow errors.

13.7.6 CXL™

Figure 60 [System view of a CXL™ Device] gives the system view of CXL™ device hierarchy. A CXL™ device appears as a Root Complex integrated endpoint to the system software. The configuration space of this root complex integrated endpoint is implemented by the device itself. The CXL™ device is enumerated normally just like any other [PCIe](#) device. The CXL™ upstream and downstream ports are not enumerated using legacy software. For the purpose of this document we will focus on the CXL™ Downstream port.

Figure 60: System view of a CXL™ Device

13.7.7 CXL™ Register Spaces

13.7.7.1 CXL™ Downstream Port Registers

The CXL™ DP memory mapped registers are mapped to a memory space defined by the CXL™ RCRB Base Register which are located in IOHC. There are one set of Base Registers for each CXLport. Enabling the CXL™ register [MMIO](#) space for a [PCIe](#) bridge make it to operate in CXL™ mode. Under CXL™ mode, the CXL™ port register space are accessed through MMIO and the PCI configuration space for the bridge to be hidden. The CXL™ port register space implements the MEMBAR0 and the CXL™ DP DVSEC. The MEMBAR0 will point to another space where the CXL™ component register spaces will reside.

Note 1: IOHC receives the X86 transaction with SDP addresses and Converts it to the SMN address. It then sends the transaction on SMN Using its RSMU host interface

Note 2: FW and all RSMU host interfaces are only connected to the SMN bus. Therefore, they only understand SMN addresses

Figure 61: Software view of single CXL™ port

Please note that the Configuration space on the [SMN](#) stack will look like PCle or CXL™ RCRB based on a strap. If the strap is set to enable CXL™, the registers will look like CXL™, otherwise they will look like PCle (reset defaults the strap to PCle). This strap will be set by AMD software (BIOS) once they read the Alternate protocol negotiated bit in the

PCIe configuration space after link training. Please refer to Compute Express Link 1.1 Specification for more information.

13.7.7.2 CXL™ Component registers

To handle the requirements of CXL™ component registers, the PCIe IP uses another Aperture ID. The CXL™ register space requirement is quite large and it was not possible to fit these in the existing 1MB space allocated for PCIe. Thus using another Aperture ID allows additional 1MB space (20 bit address) where the CXL™ component registers can be easily mapped.

CXL SMN Address Map – 20 bits

19-16	15-0		Bit definition
Port #	15:12 = 0x0	Address bits 11-0	CXL.io Registers (4K)
	15:12 = 0x1	Address bits 11-0	CXL Cache/Mem Registers (4K)
	0x2000 to 0xDFFF		CXL Implementation Specific Registers (48K)
	0xE000 to 0xE3FF		CXL ARBMUX Registers (1K)
	0xE400 to 0xEFFF		Reserved (7K)

Note: For the ARBMUX space, 1KB is required. IOHC will return 0's for access to the 7K reserved space.

Figure 62: CXL™ SMN address mapping

13.8 NBIF**13.8.1 Introduction**

The NBIO (North Bridge I/O) container is the sub-system design hierarchy that assembles the various NBIO blocks to build a high performance and low power [PCIe](#)-compatible I/O interconnect. The NBIO provides PCIe connectivity to external devices as well as AXI-based IPs.

The nBIF serves to build a PCIe system view and data path for both AMD specific clients and general 3rd-party IP clients.

- Root Complex (RC) port (in APU mode) or switch downstream port (in discrete mode) PCIe function
- One multi-function PCIe endpoint device
- Standard PCIe features and AMD specific features

Generally, nBIF support 2 main directions of transactions:

- Host transactions, which come from upstream components and go to [SMN](#).
- DMA transactions, which come from client IPs to upstream components.

This section describes the nBIF and the related features programming requirements.

Figure 63: nBIF System Hub Diagram

13.8.2 nBIF features

General nBIF System Hub features:

- SW_DS + EP configuration in single discrete mode
- Covers all AXI IPs connected through System Hub and performs SDP/AXI conversion for System Hub traffic
- Provides [PCIe](#) software view for internal IPs including all System Hub clients
- PCIe Advanced Error Reporting

13.8.3 Register Access

13.8.3.1 Access from SMN

All nBIF System Hub registers, including CFG registers or MMR or private registers, are mapped to [SMN](#). All accesses from SMN should use flattened 32-bit SMN addresses.

To leverage SMN security policy, even host register access from nBIF, nBIF would forward access to SMN, then receive access from SMN. The access routing is performed by the SMN.

13.8.3.1.1 nBIF's SMN Aperture

Generally, nBIF's register in BIF's aperture consists of the following types:

- Per-function CFG registers for BIF.SWDS (or iRC) port functions and BIF.EP functions.
- VF configuration registers for certain PF with SRIOV support.
- MSI-X [PBA](#) and per-vector masking/pending bits.
- Some common register sets per endpoint function and per downstream port (32 32-bit [DW](#) per function at most).

The nBIF reserves one 4 KB to shadow PCIESWUS.CFG registers, which is re-allocated inside nBIF.

Figure 64: nBIF aperture SMN map

13.8.3.1.2 SystemHub SMN Aperture

The [MMIO](#) registers in SystemHub can be categorized into two groups:

- SystemHub/GDC private registers.
- GPV (Global Programmer View).

In [SMN](#) space, sixteen 1 [MB](#) apertures have assigned to SystemHub which sums up to 16 MB register space (AperID 0x14~0x23). Each SystemHub instance consumes a 2 MB space, so up-to 8 SystemHub instances can be accommodated. The diagram below describes the register mapping methodology in 2 MB space and detailed mapping.

- The entire space is organized in unit of 4 KB page.
- The top 128 KB (16, 4 KB pages) is reserved for SystemHub/GDC private registers:
 - The first 64 KB is for GDC MMReg.
 - The next 60 KB is for SystemHub MMReg (Register for one SystemHub clock domain occupies 1, 4 KB).
 - The last 4 KB is for GDC Non-MMIO Reg (The first 2 KB is for GDC_RST and the second 2 KB is for GDC_RAS).
- The remaining spaces are reserved.

Figure 65: SystemHub Aperture

13.8.3.2 Configuration (CFG) Register Access from Host CPU

13.8.3.2.1 CFG Direct Access

All PCI Express configuration registers can be accessed directly by CFG type transactions.

nbif0: RC-port0 + EP device0

RC-port1 + EP device1

nbif1: RC-port0 + EP device0

nbif2: SW.DS-port0 + EP device0

All configuration space registers are all mapped to 4 KB pages of nbif*cfg in [SMN](#).

13.8.3.3 Direct Accessing nBIF Register for MMReg

A nBIF client may have memory-mapped registers (MMReg) in the client, and through nBIF, those registers can be accessed using the memory-mapped addresses within CPU system memory space.

13.8.4 NBIF Registers

Bits	Description
15	PARITY_ERROR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function receives a poisoned TLP on the primary interface.
14	SIGNALED_SYSTEM_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. For a function with its SERR Enable bit in the Command register set, indicates if the function signals a Non-fatal or Fatal error on the primary interface.
13	RECEIVED_MASTER_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Unsupported Request Completion Status on the primary interface.
12	RECEIVED_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Completer Abort Completion Status on the primary interface.
11	SIGNAL_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function completes a Request using Completer Abort Completion Status on the primary interface.
10:9	DEVSEL_TIMING. Read-only. Reset: Fixed,0h. Does not apply to PCI Express.
8	MASTER_DATA_PARITY_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: For a Requester with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Requester receives a poisoned Completion 2) Requester transmits a poisoned Request. For a Port with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Port receives a poisoned Completion going downstream 2) Port transmits a poisoned Request upstream.
7	FAST_BACK_CAPABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	Reserved.
5	PCI_66_CAP. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	CAP_LIST. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates the presence of a capability list item.
3	INT_STATUS. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if an INTx interrupt Message is pending internally in the function.
2:1	Reserved.
0	IMMEDIATE_READINESS. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is able to successfully complete valid configuration cycles at any time following any type of reset.

BXXD00F0x008 (NBIFEPF0CFG::REVISION_ID)

Read-only.

Indicates a device specific revision identifier.

Bits	Description
31:24	PMI_DATA. Read-only. Reset: Fixed,00h. Data.
23	BUS_PWR_EN. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if Secondary Bus Clock Control is supported.
22	B2_B3_SUPPORT. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if Secondary Bus Power Control is supported.
21:16	Reserved.
15	PME_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a PME is pending internally in the function. When auxiliary power is consumed, this field is sticky.
14:13	DATA_SCALE. Read-only. Reset: Fixed,0h. Data Scale.
12:9	DATA_SELECT. Read-only. Reset: Fixed,0h. Data Select.
8	PME_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls a function's ability to generate a PME. When auxiliary power is consumed, this field is sticky.
7:4	Reserved.
3	NO_SOFT_RESET. Read-only. Reset: 1. 0=Reset on D3hot to D0. 1=No Reset on D3hot to D0. Indicates if the function does not reset on a transition from D3hot to D0.
2	Reserved.
1:0	POWER_STATE. Read-write. Reset: 0h. Writes set the function to the written power state. Reads return the function's current power state.
ValidValues:	
Value	Description
0h	D0
1h	D1
2h	D2
3h	D3

BXXD00F0x060 (NBIFEPF0CFG::SBRN)

Read-only. Reset: 00h.

Serial Bus Release Number register.

_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x060;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]

_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x060;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]

_dev1_func0_instNBIF0_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF0EPF0CFGx00000060; NBIO[1:0]NBIF0EPF0CFG=10[3,1]4_8000h

Bits	Description
7:0	SBRN . Read-only. Reset: 00h. Indicates the Serial Bus Specification Release Number.

BXXD00F0x061 (NBIFEPF0CFG::FLADJ)

Reset: 00h.

Frame Length Adjustment register.

_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x061;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]

_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x061;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]

_dev1_func0_instNBIF0_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF0EPF0CFGx00000061; NBIO[1:0]NBIF0EPF0CFG=10[3,1]4_8000h

Bits	Description
7	Reserved.
6	NFC . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if Frame Length Timing Value is fixed.
5:0	FLADJ . Read-write. Reset: 00h. If NFC bit is clear, controls the Frame Length Timing Value. A value of 0 indicates 59488 high speed bit times, while each value increments by 16 high speed bit times. This field is sticky.

BXXD00F0x062 (NBIFEPF0CFG::DBESL_DBESLD)

Read-only. Reset: 00h.

Default Best Effort Service Latency and Default Best Effort Service Latency Deep registers.

_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x062;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]

_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x062;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]

_dev1_func0_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF0CFGx00000064; NBIO1NBIF0EPF0CFG=10348000h

Bits	Description
------	-------------

15:8	NEXT_PTR. Read-only. Reset: A0h. Pointer to the next item in the capabilities list, or 00h if no other items exist.
------	--

7:0	CAP_ID. Read-only. Reset: Fixed,10h. A PCI-SIG defined ID number that indicates the nature and format of the capability.
-----	---

BXXD00F0x066 (NBIFEPF0CFG::PCIE_CAP)

Read-only.

The PCI Express Capabilities register identifies PCI Express device type and associated capabilities.

`_dev0_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x066;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x066;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio0_aliasHOST; BXXD00F0x066;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio1_aliasHOST; BXXD00F0x066;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio0_aliasHOST; BXXD00F0x066;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio1_aliasHOST; BXXD00F0x066;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x066;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x066;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIF[2:0]EPF0CFGx00000066; NBIO0NBIF[2:0]EPF0CFG=[10540000,10240000,10140000]h``_dev1_func0_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0EPF0CFGx00000066; NBIO0NBIF0EPF0CFG=10148000h``_dev0_func0_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIF[2:0]EPF0CFGx00000066; NBIO1NBIF[2:0]EPF0CFG=[10740000,10440000,10340000]h``_dev1_func0_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF0CFGx00000066; NBIO1NBIF0EPF0CFG=10348000h`**Bits Description**

15:14 Reserved.

13:9 **INT_MESSAGE_NUM.** Read-only. Reset: Fixed,00h. Indicates the MSI/MSI-X vector used for interrupts generated in association with any of the status bits in the PCI Express capability structure.8 **SLOT_IMPLEMENTED.** Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported.**Description:** (Downstream Ports only) Indicates if the Link associated with this Port is connected to a slot. For Upstream Ports, this bit is undefined.7:4 **DEVICE_TYPE.** Read-only. Reset: 0h. Indicates the type of PCI Express device.**ValidValues:**

Value	Description
0h	PCI Express Endpoint
1h	Legacy PCI Express Endpoint
3h-2h	Reserved.
4h	Root Port of PCI Express Root Complex
5h	Upstream Port of PCI Express Switch
6h	Downstream Port of PCI Express Switch
7h	PCI Express to PCI/PCI-X Bridge
8h	PCI/PCI-X to PCI Express Bridge
9h	Root Complex Integrated Endpoint
Ah	Root Complex Event Collector
Fh-Bh	Reserved.

3:0 **VERSION.** Read-only. Reset: 2h. Indicates PCI-SIG defined capability structure version number.

BXXD00F0x068 (NBIFEPF0CFG::DEVICE_CAP)

Read-only.

The Device Capabilities register identifies device specific capabilities.

`_dev0_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x068;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x068;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio0_aliasHOST; BXXD00F0x068;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio1_aliasHOST; BXXD00F0x068;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio0_aliasHOST; BXXD00F0x068;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio1_aliasHOST; BXXD00F0x068;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x068;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x068;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIF[2:0]EPF0CFGx00000068; NBIO0NBIF[2:0]EPF0CFG=[10540000,10240000,10140000]h``_dev1_func0_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0EPF0CFGx00000068; NBIO0NBIF0EPF0CFG=10148000h``_dev0_func0_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIF[2:0]EPF0CFGx00000068; NBIO1NBIF[2:0]EPF0CFG=[10740000,10440000,10340000]h``_dev1_func0_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF0CFGx00000068; NBIO1NBIF0EPF0CFG=10348000h`

Bits	Description										
31:29	Reserved.										
28	FLR_CAPABLE. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Endpoints only) Indicates if the function supports Function Level Resets. For non-Endpoints this field is Reserved.										
27:26	CAPTURED_SLOT_POWER_SCALE. Read-only. Reset: 0h. (Upstream Ports only) Indicates the scale used for the Slot Power Limit Value. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1.0x</td></tr> <tr> <td>1h</td><td>0.1x</td></tr> <tr> <td>2h</td><td>0.01x</td></tr> <tr> <td>3h</td><td>0.001x</td></tr> </table>	Value	Description	0h	1.0x	1h	0.1x	2h	0.01x	3h	0.001x
Value	Description										
0h	1.0x										
1h	0.1x										
2h	0.01x										
3h	0.001x										
25:18	CAPTURED_SLOT_POWER_LIMIT. Read-only. Reset: 00h. (Upstream Ports only) In combination with the Slot Power Limit Scale value, indicates the upper limit on power supplied by slot.										
17	Reserved.										
16	ERR_COR_SUBCLASS_CAPABLE. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function supports the ERR_COR Subclass field in ERR_COR messages.										
15	ROLE_BASED_ERR_REPORTING. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates the function implements Role-Based Error Reporting functionality.										
14:12	Reserved.										
11:9	L1_ACCEPTABLE_LATENCY. Read-only. Reset: 7h. Description: (Endpoints only) Indicates the maximum acceptable latency that an Endpoint can withstand due to the transition from L1 state to L0 state. For non-Endpoints this field is Reserved.										

	ValidValues:	
	Value	Description
	0h	1 us
	1h	2 us
	2h	4 us
	3h	8 us
	4h	16 us
	5h	32 us
	6h	64 us
	7h	No Limit
8:6	L0S_ACCEPTABLE_LATENCY. Read-only. Reset: 6h.	
	Description: (Endpoints only) Indicates the maximum acceptable total latency that Endpoint can withstand due to the transition from L0s state to L0 state. For non-Endpoints this field is Reserved.	
	ValidValues:	
	Value	Description
	0h	64 ns
	1h	128 ns
	2h	256 ns
	3h	512 ns
	4h	1 us
	5h	2 us
	6h	4 us
	7h	No Limit
5	EXTENDED_TAG. Read-only. Reset: Fixed,1. 0=5 Bit Tag Supported. 1=8 Bit Tag Supported. When 10-Bit Tag Requester Supported bit is clear, indicates the maximum supported size of the Tag field as a Requester.	
4:3	PHANTOM_FUNC. Read-only. Reset: Fixed,0h. Indicates the support for use of unclaimed function numbers to extend the number of outstanding transactions allowed by logically combining unclaimed function numbers with the Tag identifier.	
	ValidValues:	
	Value	Description
	0h	No Phantom Functions
	1h	1 Phantom Function
	2h	3 Phantom Functions
	3h	7 Phantom Functions
2:0	MAX_PAYLOAD_SUPPORT. Read-only. Reset: 1h. Indicates the maximum payload size that the function can support for TLPs.	
	ValidValues:	
	Value	Description
	0h	128 Bytes
	1h	256 Bytes
	2h	512 Bytes
	3h	1024 Bytes
	4h	2048 Bytes
	5h	4096 Bytes
	7h-6h	Reserved.

Bits	Description																
15	INITIATE_FLR. Read-write. Reset: 0. 0=Normal Operation. 1=Function Level Reset. Description: (Endpoints only) A write of 1 to this bit initiates Function Level Reset to the function. Reads always return 0. For non-Bridges and non-Endpoints this bit is Reserved.																
14:12	MAX_READ_REQUEST_SIZE. Read-write. Reset: 2h. Controls the maximum Read Request size for the function as a Requester. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>128 Bytes</td></tr> <tr> <td>1h</td><td>256 Bytes</td></tr> <tr> <td>2h</td><td>512 Bytes</td></tr> <tr> <td>3h</td><td>1024 Bytes</td></tr> <tr> <td>4h</td><td>2048 Bytes</td></tr> <tr> <td>5h</td><td>4096 Bytes</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	128 Bytes	1h	256 Bytes	2h	512 Bytes	3h	1024 Bytes	4h	2048 Bytes	5h	4096 Bytes	7h-6h	Reserved.
Value	Description																
0h	128 Bytes																
1h	256 Bytes																
2h	512 Bytes																
3h	1024 Bytes																
4h	2048 Bytes																
5h	4096 Bytes																
7h-6h	Reserved.																
11	NO_SNOOP_EN. Read-write. Reset: 1. 0=Disable. 1=Enable. Controls if the function is permitted to set the No Snoop bit in the Requester Attributes of transactions it initiates that do not require hardware enforced cache coherency.																
10	AUX_POWER_PM_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a function is permitted to draw AUX power independent of PME AUX power. This bit is sticky.																
9	PHANTOM_FUNC_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use unclaimed function numbers as Phantom Functions to extend the number of outstanding transaction identifiers.																
8	EXTENDED_TAG_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use an 8-bit Tag field as a Requester. When both bits are disabled the function is restricted to use a 5-bit Tag field.																
7:5	MAX_PAYLOAD_SIZE. Read-write. Reset: 0h. Controls the maximum TLP payload size for the function.																

	ValidValues:	
	Value	Description
	0h	128 Bytes
	1h	256 Bytes
	2h	512 Bytes
	3h	1024 Bytes
	4h	2048 Bytes
	5h	4096 Bytes
	7h-6h	Reserved.
4	RELAXED_ORD_EN. Read-write. Reset: 1. 0=Disable. 1=Enable. Controls if the function is permitted to set the Relaxed Ordering bit in the Attributes field of transactions it initiates that do not require strong write ordering.	
3	USR_REPORT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Unsupported Requests.	
2	FATAL_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Fatal errors.	
1	NON_FATAL_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Non-fatal errors.	
0	CORR_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of correctable errors.	

BXXD00F0x06E (NBIFEPF0CFG::DEVICE_STATUS)

Reset: 0000h.

The Device Status register provides information about device specific parameters.

Bits	Description
15:7	Reserved.
6	EMER_POWER_REDUCTION_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: (Upstream Ports only) When Emergency Power Reduction Supported field is 1 or 2, indicates if the function has entered the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.
5	TRANSACTIONS_PEND. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function has issued Non-Posted Requests, on its own behalf, which have not been completed.
4	AUX_PWR. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Functions that require AUX power report this bit as set if AUX power is detected by the function.
3	USR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function received an Unsupported Request.
2	FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Fatal errors detected.
1	NON_FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Non-fatal errors detected.
0	CORR_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of correctable errors detected.

Bits	Description
31:24	PORT_NUMBER. Read-only. Reset: 00h. Indicates the Port number for the Link.
23	Reserved.
22	ASPM_OPTIONALITY_COMPLIANCE. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports the ASPM Optionality functionality.
21	LINK_BW_NOTIFICATION_CAP. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the Link Bandwidth Notification status and interrupt mechanisms. For Upstream Ports, this bit is Reserved.
20	DL_ACTIVE_REPORTING_CAPABLE. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the reporting of DL_Active state of the Data Link Control and Management State Machine. For Upstream Ports, this bit is Reserved.
19	SURPRISE_DOWN_ERR_REPORTING. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the detecting and reporting of a Surprise Down error condition. For Upstream Ports, this bit is Reserved.
18	CLOCK_POWER_MANAGEMENT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Upstream Ports only) Indicates if the Port tolerates removal of REFCLK via the CLKREQ# mechanism when the Link is in L1 or L2/L3 Ready. For Downstream Ports, this bit is Reserved.
17:15	L1_EXIT_LATENCY. Read-only. Reset: 0h. Indicates the L1 exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L1 to L0.

	ValidValues:	
	Value	Description
	0h	up to 999 ns
	1h	1 to 1.9 us
	2h	2 to 3.9 us
	3h	4 to 7.9 us
	4h	8 to 15.9 us
	5h	16 to 31.9 us
	6h	32 to 64 us
	7h	more than 64 us
14:12	L0S_EXIT_LATENCY. Read-only. Reset: 0h. Indicates the L0s exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L0s to L0.	
	ValidValues:	
	Value	Description
	0h	up to 63 ns
	1h	64 to 127 ns
	2h	128 to 255 ns
	3h	256 to 511 ns
	4h	512 to 999 ns
	5h	1 to 1.9 us
	6h	2 to 4 us
	7h	more than 4 us
11:10	PM_SUPPORT. Read-only. Reset: 3h. Indicates the level of ASPM supported on the Link.	
	ValidValues:	
	Value	Description
	0h	No ASPM Supported
	1h	L0s Supported
	2h	L1 Supported
	3h	L0s and L1 Supported
9:4	LINK_WIDTH. Read-only. Reset: 10h. Indicates the maximum width of the Link.	
	ValidValues:	
	Value	Description
	00h	Reserved.
	01h	x1
	02h	x2
	03h	Reserved.
	04h	x4
	07h-05h	Reserved.
	08h	x8
	0Bh-09h	Reserved.
	0Ch	x12
	0Fh-0Dh	Reserved.
	10h	x16
	1Fh-11h	Reserved.
	20h	x32
	3Fh-21h	Reserved.
3:0	LINK_SPEED. Read-only. Reset: 5h. Indicates the maximum speed of the Link.	

	ValidValues:	
	Value	Description
	0h	Reserved.
	1h	2.5 GT/s
	2h	5.0 GT/s
	3h	8.0 GT/s
	4h	16.0 GT/s
	5h	32.0 GT/s
	Fh-6h	Reserved.

Bits	Description
15:14	DRS_SIGNALING_CONTROL. Read-write. Reset: Fixed,0h. For Upstream Ports, this field is Reserved.
13:12	Reserved.
11	LINK_AUTONOMOUS_BW_INT_EN. Read-only. Reset: Fixed,0. For Upstream Ports, this bit is Reserved.
10	LINK_BW_MANAGEMENT_INT_EN. Read-only. Reset: Fixed,0. For Upstream Ports, this bit is Reserved.
9	HW_AUTONOMOUS_WIDTH_DISABLE. Read-write. Reset: Fixed,0. 0=Enable. 1=Disable. Controls the Port's ability to autonomously direct changes in link width.
8	CLOCK_POWER_MANAGEMENT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Upstream Ports only) Controls if the function is permitted to use CLKREQ# signal to power manage the Link clock. For Downstream Ports, this bit is Reserved.
7	EXTENDED_SYNC. Read-write. Reset: 0. 0=Disable. 1=Enable. Forces the transmission of additional ordered sets, exiting the L0s or Recovery states.
6	COMMON_CLOCK_CFG. Read-write. Reset: 0. 0=Same REFCLK not Used. 1=Same REFCLK Used. Indicates if this component and the component at the opposite end of this Link are operating with a distributed common reference clock.
5	RETRAIN_LINK. Read-only. Reset: Fixed,0. For Upstream Ports, this bit is Reserved
4	LINK_DIS. Read-write. Reset: Fixed,0. 0=Normal Operation. 1=Disable Link. Description: (Downstream Ports only) Disables the Link when set to 1, by directing the Physical Layer LTSSM to the Disabled state. For Upstream Ports, this bit is Reserved.
3	READ_CPL_BOUNDARY. Read-write. Reset: Fixed,0. 0=64 Byte. 1=128 Byte. Description: Indicates the RCB value for the Root Port sourcing the topology associated with the Link. For Switches, this bit is Reserved.
2	PTM_PROP_DELAY_ADAPT_INTER_B. Read-write. Reset: Fixed,0. 0=Interpretation A. 1=Interpretation B. Description: Controls the interpretation of the Propagation Delay[31:0] field of the PTM Message. For devices that don't support PTM, this bit is Reserved.
1:0	PM_CONTROL. Read-write. Reset: 0h. Controls the level of ASPM enabled on the Link.

Valid Values:		
Value	Description	
0h	Disabled	
1h	Tx_L0s Entry Enabled	
2h	L1 Entry Enabled	
3h	Tx_L0s and L1 Entry Enabled	

BXXD00F0x076 (NBIFEPF0CFG::LINK_STATUS)

The Link Status register provides information about Link specific parameters.

Bits	Description
15	LINK_AUTONOMOUS_BW_STATUS. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates that hardware has autonomously changed the Link's speed or width, without the Port transitioning through DL_Down status, for reasons other than to attempt to correct unreliable Link operation.
14	LINK_BW_MANAGEMENT_STATUS. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Description: Indicates that either of the following has occurred without the Port transitioning through DL_Down status: A Link retraining has completed following a write of 1 to the Retrain Link bit. Hardware has changed the Link's speed or width to attempt to correct unreliable Link operation, either through an LTSSM timeout or a higher level process.
13	DL_ACTIVE. Read-only. Reset: Fixed,0. 0=Not DL_Active state. 1=DL_Active state. If Data Link Layer Link Active Capability is supported and when the optionally supported SFI DLL State Mask bit is clear, indicates the status of the Data Link Control and Management State Machine.
12	SLOT_CLOCK_CFG. Read-only. Reset: Fixed,1. 0=Same REFCLK not Required. 1=Same REFCLK Required. Indicates if the component uses the same physical reference clock that the platform provides on the connector.
11	LINK_TRAINING. Read-only. Reset: Fixed,0. 0=Normal. 1=Link Training in Progress. Description: (Downstream Ports only) Indicates that Link training is in progress (Physical Layer LTSSM in Configuration or Recovery state) or that 1 was written to the Retrain Link bit but Link training has not yet begun. Hardware clears this bit once Link training is complete. For Upstream Ports, this bit is Reserved.
10	Reserved.
9:4	NEGOTIATED_LINK_WIDTH. Read-only. Reset: 10h. Indicates the negotiated width of the Link.

	ValidValues:	
	Value	Description
	00h	Reserved.
	01h	x1
	02h	x2
	03h	Reserved.
	04h	x4
	07h-05h	Reserved.
	08h	x8
	0Bh-09h	Reserved.
	0Ch	x12
	0Fh-0Dh	Reserved.
	10h	x16
	1Fh-11h	Reserved.
	20h	x32
	3Fh-21h	Reserved.
3:0	CURRENT_LINK_SPEED. Read-only. Reset: 5h. Indicates the negotiated speed of the Link.	
	ValidValues:	
	Value	Description
	0h	Reserved.
	1h	2.5 GT/s
	2h	5.0 GT/s
	3h	8.0 GT/s
	4h	16.0 GT/s
	5h	32.0 GT/s
	Fh-6h	Reserved.

BXXD00F0x088 (NBIFEPF0CFG::DEVICE_CAP2)

Read-only.

The Device Capabilities 2 register identifies device specific capabilities.

Bits	Description										
31	FRS_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function supports Function Readiness Status capability.										
30:27	Reserved.										
26	EMER_POWER_REDUCTION_INIT_REQ. Read-only. Reset: 0. 0=Initialization not Required. 1=Initialization Required. Description: (Upstream Ports only) Indicates if the function requires software initialization upon exiting the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.										
25:24	EMER_POWER_REDUCTION_SUPPORTED. Read-only. Reset: 0h. Description: (Upstream Ports only) Indicates if the function supports the Emergency Power Reduction mechanism. For Downstream Ports, this bit is Reserved. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Not Supported</td></tr> <tr> <td>1h</td><td>Supported using Device Specific mechanism</td></tr> <tr> <td>2h</td><td>Supported using Form Factor or Device Specific mechanisms</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Not Supported	1h	Supported using Device Specific mechanism	2h	Supported using Form Factor or Device Specific mechanisms	3h	Reserved.
Value	Description										
0h	Not Supported										
1h	Supported using Device Specific mechanism										
2h	Supported using Form Factor or Device Specific mechanisms										
3h	Reserved.										
23:22	MAX_END_END_TLP_PREFIXES. Read-only. Reset: 0h. Indicates the maximum number of End-End TLP Prefixes supported by a function with End-End TLP Prefix Supported set. If End-End TLP Prefix Supported bit is not set, this field is Reserved. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>4 E-E TLP Prefixes Supported</td></tr> <tr> <td>1h</td><td>1 E-E TLP Prefix Supported</td></tr> <tr> <td>2h</td><td>2 E-E TLP Prefixes Supported</td></tr> <tr> <td>3h</td><td>3 E-E TLP Prefixes Supported</td></tr> </table>	Value	Description	0h	4 E-E TLP Prefixes Supported	1h	1 E-E TLP Prefix Supported	2h	2 E-E TLP Prefixes Supported	3h	3 E-E TLP Prefixes Supported
Value	Description										
0h	4 E-E TLP Prefixes Supported										
1h	1 E-E TLP Prefix Supported										
2h	2 E-E TLP Prefixes Supported										
3h	3 E-E TLP Prefixes Supported										
21	END_END_TLP_PREFIX_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports receiving End-End TLP Prefixes.										

20	EXTENDED_FMT_FIELD_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the 3-bit definition of the Fmt field. When not set, the function supports only the 2-bit definition of the Fmt field.										
19:18	OBFF_SUPPORTED. Read-only. Reset: 0h. Indicates if the function supports Optimized Buffer Flush/Fill signaling. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>OBFF not Supported</td></tr> <tr> <td>1h</td><td>OBFF using Message Supported</td></tr> <tr> <td>2h</td><td>OBFF using WAKE# Supported</td></tr> <tr> <td>3h</td><td>OBFF using WAKE# and Message Supported</td></tr> </table>	Value	Description	0h	OBFF not Supported	1h	OBFF using Message Supported	2h	OBFF using WAKE# Supported	3h	OBFF using WAKE# and Message Supported

0h	TPH and Extended TPH Completer not Supported										
1h	TPH Completer Supported and Extended TPH Completer not Supported										
2h	Reserved.										
3h	TPH and Extended TPH Completer Supported										
11	LTR_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the Latency Tolerance Reporting mechanism.										
10	NO_RO_ENABLED_P2P_PASSING. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a routing element supports never allowing posted requests with Relaxed Ordering attribute bit set, to pass each other. For Endpoints, this bit is Reserved.										
9	CAS128_CMPLT_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 128-bit AtomicOp completer.										
8	ATOMICOP_64CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 64-bit AtomicOp completer.										
7	ATOMICOP_32CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 32-bit AtomicOp completer.										
6	ATOMICOP_ROUTING_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a Port supports AtomicOp routing. For Endpoints, this bit is Reserved.										
5	ARI_FORWARDING_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if a Port supports ARI forwarding. For Upstream Ports, this bit is Reserved.										

4	CPL_TIMEOUT_DIS_SUPPORTED. Read-only. 0=Not Supported. 1=Supported. Indicates if a Requester supports the Completion Timeout disable mechanism. For functions that don't issue requests, this field is Reserved.																						
3:0	CPL_TIMEOUT_RANGE_SUPPORTED. Read-only. Indicates if a Requester supports the Completion Timeout programmability mechanism. For functions that don't issue requests, this field is Reserved. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Fixed</td></tr> <tr> <td>1h</td><td>Range A Supported</td></tr> <tr> <td>2h</td><td>Range B Supported</td></tr> <tr> <td>3h</td><td>Ranges A & B Supported</td></tr> <tr> <td>5h-4h</td><td>Reserved.</td></tr> <tr> <td>6h</td><td>Ranges B & C Supported</td></tr> <tr> <td>7h</td><td>Ranges A & B & C Supported</td></tr> <tr> <td>Dh-8h</td><td>Reserved.</td></tr> <tr> <td>Eh</td><td>Ranges B & C & D Supported</td></tr> <tr> <td>Fh</td><td>Ranges A & B & C & D Supported</td></tr> </table>	Value	Description	0h	Fixed	1h	Range A Supported	2h	Range B Supported	3h	Ranges A & B Supported	5h-4h	Reserved.	6h	Ranges B & C Supported	7h	Ranges A & B & C Supported	Dh-8h	Reserved.	Eh	Ranges B & C & D Supported	Fh	Ranges A & B & C & D Supported
Value	Description																						
0h	Fixed

Bits	Description	
15	END_END_TLP_PREFIX_BLOCKING. Read-only. 0=Disable. 1=Enable. For Endpoints, this bit is Reserved.	
14:13	OBFF_EN. Read-write. Reset: 0h. Controls if the function is permitted to use Optimized Buffer Flush/Fill signaling.	
	ValidValues:	
	Value	Description
	0h	Disable
	1h	Enable OBFF Message A
	2h	Enable OBFF Message B
	3h	Enable OBFF WAKE#
12	TEN_BIT_TAG_REQUESTER_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a function is permitted to use a 10-bit Tag field as a Requester. When disabled the function uses the setting in the Extended Tag Field Enable bit.	
11	EMER_POWER_REDUCTION_REQUEST. Read-write. Reset: 0. 0=Normal Operation. 1=Enter Emergency Power Reduction state.	
	Description: (Upstream Ports only) Triggers the function to enter the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.	
10	LTR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port is permitted to use the Latency Tolerance Reporting mechanism.	
9	IDO_COMPLETION_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of completions it returns.	
8	IDO_REQUEST_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of requests it initiates.	
7	ATOMICOP_EGRESS_BLOCKING. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable.	
	Description: (Downstream Ports or Switch Upstream Ports only) Controls the ability of a Port to block AtomicOps that target going out of this Egress Port. For Endpoints, this bit is Reserved.	
6	ATOMICOP_REQUEST_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to initiate AtomicOp requests.	
5	ARI_FORWARDING_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable.	
	Description: (Downstream Ports only) Controls the ability of a Port to allow Configuration requests for Device Numbers greater than 0, when converting from a Type 1 Configuration cycle to a Type 0 Configuration cycle. For Upstream Ports, this bit is Reserved.	

4	CPL_TIMEOUT_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the ability of a function to use the completion timeout mechanism.																												
3:0	CPL_TIMEOUT_VALUE. Read-write. Reset: 0h. Controls the completion timeout value for the function. Ah	DeEmph variable, Preshoot 0.0 dB																										
Fh-Bh	Reserved.																										
11	COMPLIANCE_SOS. Read-write. Reset: 0. 0=Disable. 1=Enable. At 5.0 GT/s or lower only, controls if the Port's transmitter inserts SKP ordered sets when sending either compliance pattern. This bit is sticky.																										
10	ENTER_MOD_COMPLIANCE. Read-write. Reset: 0. 0=Compliance Pattern. 1=Modified Compliance Pattern. Controls which compliance pattern the Port transmits, when Enter Compliance bit is used to enter compliance mode. This bit is sticky.																										
9:7	XMIT_MARGIN. Read-write. Reset: 0h. Controls the value of the non-deemphasized voltage level at the Port's transmitter pins. This field is sticky.																										
6	SELECTABLE_DEEMPHASIS. Read-only. Reset: Fixed, 0. 0=-6.0 dB. 1=-3.5 dB. (Downstream Ports only) At 5.0 GT/s only, controls the Port's transmitter de-emphasis level.																										
5	HW_AUTONOMOUS_SPEED_DISABLE. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the Port's ability to autonomously direct changes in link speed. This bit is sticky.																										

4	ENTER_COMPLIANCE. Read-write. Reset: 0. 0=Normal Operation. 1=Enter Compliance. Forces a Port to enter compliance mode, when it receives a hot reset. This bit is sticky, but for Upstream Ports only is cleared if the link state goes to Detect.																
3:0	TARGET_LINK_SPEED. Read-write. Reset: 5h. (Downstream Ports only) Controls the upper limit on the Link operational speed by restricting the data rate values advertised by the upstream component. When using Enter Compliance bit, this field controls the Port's target compliance mode speed. This field is sticky. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Reserved.</td></tr> <tr> <td>1h</td><td>2.5 GT/s</td></tr> <tr> <td>2h</td><td>5.0 GT/s</td></tr> <tr> <td>3h</td><td>8.0 GT/s</td></tr> <tr> <td>4h</td><td>16.0 GT/s</td></tr> <tr> <td>5h</td><td>32.0 GT/s</td></tr> <tr> <td>Fh-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Reserved.	1h	2.5 GT/s	2h	5.0 GT/s	3h	8.0 GT/s	4h	16.0 GT/s	5h	32.0 GT/s	Fh-6h	Reserved.

Bits	Description																
15	DRS_MESSAGE_RECEIVED. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Description: (Downstream Ports only) When DRS Supported bit is set and When the optionally supported SFI DRS Mask bit is clear, indicates if the Port has received a DRS Message. For Upstream Ports, this bit is Reserved.																
14:12	DOWNSTREAM_COMPONENT_PRESENCE. Read-only. Reset: Fixed,0h. Description: (Downstream Ports only) When DRS Supported bit is set, this field indicates the presence and DRS state of the downstream component (if any). For Upstream Ports, this bit is Reserved. ValidValues:																
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Link Down, Presence not Determined</td></tr> <tr> <td>1h</td><td>Link Down, Component not Present</td></tr> <tr> <td>2h</td><td>Link Down, Component Present and Data Link Layer not Active</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> <tr> <td>4h</td><td>Link Up, Component Present and DRS Message not Received</td></tr> <tr> <td>5h</td><td>Link Up, Component Present and DRS Message Received</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Link Down, Presence not Determined	1h	Link Down, Component not Present	2h	Link Down, Component Present and Data Link Layer not Active	3h	Reserved.	4h	Link Up, Component Present and DRS Message not Received	5h	Link Up, Component Present and DRS Message Received	7h-6h	Reserved.
Value	Description																
0h	Link Down, Presence not Determined																
1h	Link Down, Component not Present																
2h	Link Down, Component Present and Data Link Layer not Active																
3h	Reserved.																
4h	Link Up, Component Present and DRS Message not Received																
5h	Link Up, Component Present and DRS Message Received																
7h-6h	Reserved.																
11:10	Reserved.																
9:8	CROSSLINK_RESOLUTION. Read-only. Reset: Fixed,0h. Indicates the state of the Port's crosslink negotiation (if supported). ValidValues:																
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>No Information</td></tr> <tr> <td>1h</td><td>Completed as Upstream Port</td></tr> <tr> <td>2h</td><td>Completed as Downstream Port</td></tr> <tr> <td>3h</td><td>In Progress</td></tr> </table>	Value	Description	0h	No Information	1h	Completed as Upstream Port	2h	Completed as Downstream Port	3h	In Progress						
Value	Description																
0h	No Information																
1h	Completed as Upstream Port																
2h	Completed as Downstream Port																
3h	In Progress																
7	RTM2_PRESENCE_DET. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. When Two Retimers Presence Detect Supported bit is set, indicates if the Port detected two Retimers in the most recent link negotiation. This bit is sticky.																
6	RTM1_PRESENCE_DET. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. When Retimer Present Detect Supported bit is set, indicates if the Port detected a Retimer in the most recent link negotiation. This bit is sticky.																

5	LINK_EQUALIZATION_REQUEST_8GT . Read, Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 8.0 GT/s link equalization to be performed. This bit is sticky.
4	EQUALIZATION_PHASE3_SUCCESS_8GT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
3	EQUALIZATION_PHASE2_SUCCESS_8GT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
2	EQUALIZATION_PHASE1_SUCCESS_8GT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
1	EQUALIZATION_COMPLETE_8GT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the 8.0 GT/s Transmitter Equalization procedure has completed. This bit is sticky.
0	CUR_DEEMPHASIS_LEVEL . Read-only. Reset: 1. 0=-6.0 dB. 1=-3.5 dB. At 5.0 GT/s only, indicates the Port's transmitter de-emphasis level.

BXXD00F0x0A0 (NBIFEPF0CFG::MSI_CAP_LIST)

Read-only.

Message Signaled Interrupt Capability header.

Bits Description

31:3 **MSIX_TABLE_OFFSET.** Read-only. Indicates the offset from the address value contained in the [BAR](#) defined by MSIX_TABLE_BIR field, to point to the start of the MSI-X Table. The offset value must be padded with 3 bits of zero, to form a QWORD-aligned offset.

2:0 **MSIX_TABLE_BIR.** Read-only. Indicates the [BAR](#) whose allocated address range contains the MSI-X Table.

ValidValues:

Value	Description
0h	BAR at offset 0x10
1h	BAR at offset 0x14
2h	BAR at offset 0x18
3h	BAR at offset 0x1C
4h	BAR at offset 0x20
5h	BAR at offset 0x24
7h-6h	Reserved.

BXXD00F0x0C8 (NBIFEPF0CFG::MSIX_PBA)

Read-only.

MSI-X [PBA](#) Offset and PBA BIR register.`_dev0_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x0C8;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x0C8;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio0_aliasHOST; BXXD00F0x0C8;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio1_aliasHOST; BXXD00F0x0C8;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio0_aliasHOST; BXXD00F0x0C8;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio1_aliasHOST; BXXD00F0x0C8;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x0C8;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x0C8;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIF[2:0]EPF0CFGx000000C8; NBIO0NBIF[2:0]EPF0CFG=[10540000,10240000,10140000]h``_dev1_func0_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0EPF0CFGx000000C8; NBIO0NBIF0EPF0CFG=10148000h``_dev0_func0_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIF[2:0]EPF0CFGx000000C8; NBIO1NBIF[2:0]EPF0CFG=[10740000,10440000,10340000]h``_dev1_func0_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF0CFGx000000C8; NBIO1NBIF0EPF0CFG=10348000h`**Bits Description**

Bits	Description																		
31:24	SATA_CAP_RESERVED2. Read-only. Reset: Fixed,00h. Reserved.																		
23:4	SATA_CAP_BAR_OFFSET. Read-only. Reset: Fixed,0_0000h. When SATA_CAP_BAR_LOC field is 0 to 5, indicates the offset from the address value contained in the BAR defined by SATA_CAP_BAR_LOC field, to point to the start of the Index-Data pair. The offset value must be padded with 2 bits of zero, to form a DWORD-aligned offset.																		
3:0	SATA_CAP_BAR_LOC. Read-only. Reset: Fixed,Fh. Indicates the BAR whose allocated address range contains the Index-Data pair. ValidValues: <table border="1"> <thead> <tr> <th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>0h</td><td>BAR at offset 0x10</td></tr> <tr> <td>1h</td><td>BAR at offset 0x14</td></tr> <tr> <td>2h</td><td>BAR at offset 0x18</td></tr> <tr> <td>3h</td><td>BAR at offset 0x1C</td></tr> <tr> <td>4h</td><td>BAR at offset 0x20</td></tr> <tr> <td>5h</td><td>BAR at offset 0x24</td></tr> <tr> <td>Eh-6h</td><td>Reserved.</td></tr> <tr> <td>Fh</td><td>Index-Data pair is implemented in two DWORDs directly following SATA_CAP_1 register</td></tr> </tbody> </table>	Value	Description	0h	BAR at offset 0x10	1h	BAR at offset 0x14	2h	BAR at offset 0x18	3h	BAR at offset 0x1C	4h	BAR at offset 0x20	5h	BAR at offset 0x24	Eh-6h	Reserved.	Fh	Index-Data pair is implemented in two DWORDs directly following SATA_CAP_1 register
Value	Description																		
0h	BAR at offset 0x10																		
1h	BAR at offset 0x14																		
2h	BAR at offset 0x18																		
3h	BAR at offset 0x1C																		
4h	BAR at offset 0x20																		
5h	BAR at offset 0x24																		
Eh-6h	Reserved.																		
Fh	Index-Data pair is implemented in two DWORDs directly following SATA_CAP_1 register

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 140h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0002h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F0x114 (NBIFEPF0CFG::PCIE_PORT_VC_CAP_REG1)

Read-only.

Port VC Capability register 1.

Bits	Description
31	VC_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the enabling of a Virtual Channel.
30:27	Reserved.
26:24	VC_ID. Read-write. Reset: 0h. Assigns a VC ID to the VC resource.
23:20	Reserved.
19:17	PORT_ARB_SELECT. Read-write. Reset: 0h. Configures the Port Arbitration for the VC resource by selecting one of the supported Port Arbitration schemes.
16	LOAD_PORT_ARB_TABLE. Read-only. Reset: Fixed,0. Updates the Port Arbitration logic from the Port Arbitration Table (if present) for the VC resource, when written with 1. Reads always return 0.
15:8	Reserved.
7:1	TC_VC_MAP_TC1_7. Read-write. Reset: 00h. Indicates the TCs that are mapped to the VC resource.
0	TC_VC_MAP_TC0. Read-only. Reset: Fixed,0. Indicates the TCs that are mapped to the VC resource.

Bits	Description
31:27	Reserved.
26	POISONED_TLP_EGRESS_BLOCKED_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Poisoned TLP Egress Blocked Error.
25	TLP_PREFIX_BLOCKED_ERR_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a TLP Prefix Blocked Error.
24	ATOMICOP_EGRESS_BLOCKED_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects an AtomicOp Egress Blocked Error.
23	MC_BLOCKED_TLP_STATUS. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a MC Blocked TLP. This bit is sticky.
22	UNCORR_INT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an ECRC Error. This bit is sticky.
18	MAL_TLP_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Receiver Overflow Error.
16	UNEXP_CPL_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Completion Timeout Error. This bit is sticky.
13	FC_ERR_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Flow Control Protocol Error.
12	PSN_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Poisoned TLP Received Error. This bit is sticky.
11:6	Reserved.

5	SURPDN_ERR_STATUS . Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. (Downstream Ports only) Indicates if the function detects a Surprise Down Error.
4	DLP_ERR_STATUS . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD00F0x158 (NBIFEPF0CFG::PCIE_UNCORR_ERR_MASK)

The Uncorrectable Error Mask register controls reporting of individual uncorrectable errors by a function.

Bits	Description
31:13	Reserved.
12	COMPLETION_TIMEOUT_LOG_CAPABLE. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording the TLP Prefix (if any) and the Header for the TLP corresponding to a detected Completion Timeout error.
11	TLP_PREFIX_LOG_PRESENT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. When the First Error Pointer is valid, indicates that the TLP Prefix Log register contains valid information. This bit is sticky. If End-End TLP Prefix Supported bit is not set, this bit is Reserved.
10	MULTI_HDR_RECD_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the function is permitted to record more than one error header.
9	MULTI_HDR_RECD_CAP. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording more than one error header.
8	ECRC_CHECK_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function checks ECRC. This bit is sticky.
7	ECRC_CHECK_CAP. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of checking ECRC.
6	ECRC_GEN_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function generates ECRC. This bit is sticky.
5	ECRC_GEN_CAP. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of generating ECRC.
4:0	FIRST_ERR_PTR. Read-only. Reset: 00h. Indicates the bit position of the first error reported in the Uncorrectable Error Status register. This field is only valid if the indicated bit is also set. This field is sticky.

Bits	Description
31:16	BAR_SIZE_SUPPORTED_UPPER. Read-only. Reset: 0000h. Indicates that the function supports operating with the specified BAR sizes. This field is a bit vector that covers the size range of 256 TB to 8 EB.
15:14	Reserved.
13:8	BAR_SIZE. Read-write. Reset: 00h. Controls the size of the address space that the BAR resource is requesting. The encoded values range from 0 (1 MB) to 43 (8 EB), with each incremented value indicating double the previous size.
7:5	BAR_TOTAL_NUM. Read-only. Reset: 1h. Indicates the total number of resizable BARs in the capability structure for the function.
4:3	Reserved.
2:0	BAR_INDEX. Read-only. Reset: 0h. Indicates the BAR controlled by this register.
Valid Values:	
Value	Description
0h	BAR at offset 0x10
1h	BAR at offset 0x14
2h	BAR at offset 0x18
3h	BAR at offset 0x1C
4h	BAR at offset 0x20
5h	BAR at offset 0x24
7h-6h	Reserved.

Bits	Description
31:16	BAR_SIZE_SUPPORTED_UPPER . Read-only. Reset: 0000h. Indicates that the function supports operating with the specified BAR sizes. This field is a bit vector that covers the size range of 256 TB to 8 EB.
15:14	Reserved.
13:8	BAR_SIZE . Read-write. Reset: 00h. Controls the size of the address space that the BAR resource is requesting. The encoded values range from 0 (1 MB) to 43 (8 EB), with each incremented value indicating double the previous size.
7:5	BAR_TOTAL_NUM . Read-only. Reset: Fixed,0h. Reserved.
4:3	Reserved.
2:0	BAR_INDEX . Read-only. Reset: 0h. Indicates the BAR controlled by this register. It has the same encoding as shown for Resizable BAR1 Control register.

BXXD00F0x224 (NBIFEPF0CFG::PCIE_BAR5_CAP)

Read-only. Reset: 0000_0000h.

Resizable BAR5 Capability register.

Bits Description

31:21 Reserved.

20:18 **POWER_RAIL**. Read-only. Reset: 1h. Indicates the thermal load or power rail of the operating condition being described.**ValidValues:**

Value	Description
0h	12 V
1h	3.3 V
2h	1.5 or 1.8 V
6h-3h	Reserved.
7h	Thermal

17:15 **TYPE**. Read-only. Reset: 7h. Indicates the type of the operating condition being described.**ValidValues:**

Value	Description
0h	PME Aux
1h	Auxiliary
2h	Idle
3h	Sustained
4h	Sustained in Emergency Power Reduction
5h	Maximum in Emergency Power Reduction
6h	Reserved.
7h	Maximum

14:13 **PM_STATE**. Read-only. Reset: 0h. Indicates the power management state of the operating condition being described.**ValidValues:**

Value	Description
0h	D0
1h	D1
2h	D2
3h	D3

12:10	PM_SUB_STATE. Read-only. Reset: 0h. Indicates the power management sub-state of the operating condition being described.										
9:8	DATA_SCALE. Read-only. Reset: 1h. Indicates the scale used for the Base Power value.										
ValidValues:											
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1.0x</td></tr> <tr> <td>1h</td><td>0.1</td></tr> <tr> <td>2h</td><td>0.01x</td></tr> <tr> <td>3h</td><td>0.001x</td></tr> </table>	Value	Description	0h	1.0x	1h	0.1	2h	0.01x	3h	0.001x
Value	Description										
0h	1.0x										
1h	0.1										
2h	0.01x										
3h	0.001x										
7:0	BASE_POWER. Read-only. Reset: 00h. In combination with the Data Scale value, indicates in Watts the base power value in the given operating condition.										

BXXD00F0x24C (NBIFEPF0CFG::PCIE_PWR_BUDGET_CAP)

Read-only. Reset: 00h.

Bits Description

31:24	TRANS_LAT_VAL_1. Read-only. Reset: 19h. In combination with the Transition Latency Unit value, indicates the transition latency value 1. The Transition Latency Indicator Bits field can use this value to indicate the maximum transition latency for a substate.										
23:16	TRANS_LAT_VAL_0. Read-only. Reset: 0Ah. In combination with the Transition Latency Unit value, indicates the transition latency value 0. The Transition Latency Indicator Bits field can use this value to indicate the maximum transition latency for a substate.										
15:14	Reserved.										
13:12	PWR_ALLOC_SCALE. Read-only. Reset: 1h. Indicates the scale used for the Substate Power Allocation value. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>10x</td></tr> <tr> <td>1h</td><td>1x</td></tr> <tr> <td>2h</td><td>0.1x</td></tr> <tr> <td>3h</td><td>0.01x</td></tr> </table>	Value	Description	0h	10x	1h	1x	2h	0.1x	3h	0.01x
Value	Description										
0h	10x										
1h	1x										
2h	0.1x										
3h	0.01x										
11:10	Reserved.										
9:8	TRANS_LAT_UNIT. Read-only. Reset: 0h. Indicates the unit used for the Transition Latency Value 0/1 value. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1 ms</td></tr> <tr> <td>1h</td><td>10 ms</td></tr> <tr> <td>2h</td><td>100 ms</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	1 ms	1h	10 ms	2h	100 ms	3h	Reserved.
Value	Description										
0h	1 ms										
1h	10 ms										
2h	100 ms										
3h	Reserved.										
7:5	Reserved.										
4:0	SUBSTATE_MAX. Read-only. Reset: 07h. Indicates the maximum substate number (plus one) supported by the function.										

BXXD00F0x258 (NBIFEPF0CFG::PCIE_DPA_LATENCY_INDICATOR)

Bits	Description
15:13	Reserved.
12	UNCLAIMED_REQUEST_REDIRECT_CNTL. Read-write. Reset: 0. 0=Unsupported Request. 1=Forwarded upstream. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port memory aperture which is not within any of the component's Switch Downstream Port memory aperture or BAR claimed memory space.
11:10	USP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port BAR claimed memory space.
ValidValues:	
Value	Description
0h	Request allowed
1h	Request blocked
2h	Request redirected
3h	Reserved.
9:8	DSP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's BAR claimed memory space.
ValidValues:	
Value	Description
0h	Request allowed
1h	Request blocked
2h	Request redirected
3h	Reserved.
7	IO_REQUEST_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component handles upstream I/O Requests as ACS Violations.
6	DIRECT_TRANSLATED_P2P_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component overrides the ACS P2P Request Redirect and ACS P2P Egress Control mechanisms with P2P Memory Requests whose Address Translation field indicates a Translated address.
5	P2P_EGRESS_CONTROL_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. In conjunction with the Egress Control Vector plus the ACS P2P Request Redirect and ACS Direct Translated P2P mechanisms, controls when to allow, disallow, or redirect P2P Requests.
4	UPSTREAM_FORWARDING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component forwards Upstream any Request or Completion TLPs it receives that were redirected Upstream by a component lower in the hierarchy.

3	P2P_COMPLETION_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component redirects P2P Completions Upstream; applicable only to Read Completions whose Relaxed Ordering Attribute is clear.
2	P2P_REQUEST_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. In conjunction with ACS P2P Egress Control and ACS Direct Translated P2P mechanisms, controls if the component redirects P2P Requests Upstream.
1	TRANSLATION_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component blocks all Upstream Memory Requests whose Address Translation field is not set to the default value.
0	SOURCE_VALIDATION_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component validates the Bus Number from the Requester ID of Upstream Requests against the secondary or subordinate Bus Numbers.

Bits	Description
31	REMOTE_DLF_SUPPORTED_VALID. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if the Port received a Data Link Feature DLLP during DL_Feature negotiation, containing meaningful Remote Data Link Feature Supported and Remote Data Link Feature Ack fields. The bit is cleared when the Data Link Layer enters the DL_Inactive state.
30:23	Reserved.
22:0	REMOTE_DLF_SUPPORTED. Read-only. Reset: 00_0001h. Captures which Data Link Features the Remote Port supports. This field is a bit vector that covers all supported features: Bit 0 is Scaled Flow Control Supported. If Data Link Feature Exchange Enable bit is set, this field's value is from the Port's received Data Link Feature DLLP.

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 570h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: 1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: 002Ah. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F0x504 (NBIFEPF0CFG::LINK_CAP_32GT)

Read-only.

The 32.0 [GT/s](#) Capabilities register identifies Physical Layer 32.0 GT/s specific capabilities.`_dev0_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x504;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x504;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio0_aliasHOST; BXXD00F0x504;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio1_aliasHOST; BXXD00F0x504;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio0_aliasHOST; BXXD00F0x504;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio1_aliasHOST; BXXD00F0x504;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x504;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x504;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIF[2:0]EPF0CFGx00000504; NBIO0NBIF[2:0]EPF0CFG=[10540000,10240000,10140000]h``_dev1_func0_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0EPF0CFGx00000504; NBIO0NBIF0EPF0CFG=10148000h``_dev0_func0_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIF[2:0]EPF0CFGx00000504; NBIO1NBIF[2:0]EPF0CFG=[10740000,10440000,10340000]h``_dev1_func0_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF0CFGx00000504; NBIO1NBIF0EPF0CFG=10348000h`

Bits	Description
31:16	Reserved.
15:11	MODIFIED_TS_RESERVED_USAGE_MODES. Read-only. Reset: Fixed,00h. Reserved.
10	MODIFIED_TS_USAGE_MODE2_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports negotiating to use alternate Training Set protocols.
9	MODIFIED_TS_USAGE_MODE1_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports sending and receiving vendor specific Training Set Messages.
8	MODIFIED_TS_USAGE_MODE0_SUPPORTED. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if this port supports standard PCI Express Training Set usage mode.
7:2	Reserved.
1	NO_EQ_NEEDED_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization is needed.
0	EQ_BYPASS_TO_HIGHEST_RATE_SUPPORTED. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization for link speeds other than the highest common supported link speed are bypassed.

BXXD00F0x508 (NBIFEPF0CFG::LINK_CNTL_32GT)

Read-write.

The 32.0 [GT/s](#) Control register controls Physical Layer 32.0 GT/s specific parameters.`_dev0_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x508;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x508;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio0_aliasHOST; BXXD00F0x508;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF1_nbio1_aliasHOST; BXXD00F0x508;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio0_aliasHOST; BXXD00F0x508;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func0_instNBIF2_nbio1_aliasHOST; BXXD00F0x508;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x508;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev1_func0_instNBIF0_nbio1_aliasHOST; BXXD00F0x508;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func0_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIF[2:0]EPF0CFGx00000508; NBIO0NBIF[2:0]EPF0CFG=[10540000,10240000,10140000]h``_dev1_func0_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0EPF0CFGx00000508; NBIO0NBIF0EPF0CFG=10148000h``_dev0_func0_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIF[2:0]EPF0CFGx00000508; NBIO1NBIF[2:0]EPF0CFG=[10740000,10440000,10340000]h``_dev1_func0_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF0CFGx00000508; NBIO1NBIF0EPF0CFG=10348000h`

Bits	Description
31:11	Reserved.
10:8	MODIFIED_TS_USAGE_MODE_SEL. Read-write. Reset: Fixed,0h. Description: (Downstream Ports only) Configures the Training Set usage mode by selecting one of the supported Training Set usage modes. This bit is sticky. For Upstream Ports, this bit is Reserved.
7:2	Reserved.
1	NO_EQ_NEEDED_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls a port's ability to advertise that link equalization is needed. This bit is sticky.
0	EQ_BYPASS_TO_HIGHEST_RATE_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls a port's ability to advertise that link equalization for link speeds other than the highest common supported link speed is bypassed. This bit is sticky.

BXXD00F0x50C (NBIFEPF0CFG::LINK_STATUS_32GT)

Indicates if the 32.0 [GT/s](#) Transmitter Equalization procedure has completed. This bit is sticky.

Bits	Description
31:11	Reserved.
10	NO_EQ_NEEDED_RECEIVED. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received, containing the No Equalization Needed bit set. Also indicates if a non-modified TS1 or non-modified TS2 was received, containing the No Equalization Needed encoding.
9	TRANSMITTER_PRECODE_REQUEST. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the Port will request the transmitter to use Precoding by setting the Precoding Request bit in TS1s/TS2s transmitted prior to entry to Recovery.Speed.
8	TRANSMITTER_PRECODING_ON. Read-only. Reset: 0. Indicates whether the receiver asked this transmitter to enable Precoding.
7:6	RECEIVED_ENHANCED_LINK_BEHAVIOR_CNTL. Read-only. Reset: 0h. Contains the Enhanced Link Behavior Control bits from the most recent TS1 or TS2 received in the Polling or Configuration states.
5	MODIFIED_TS_RECEIVED. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received.
4	LINK_EQUALIZATION_REQUEST_32GT. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 32.0 GT/s link equalization to be performed. This bit is sticky.
3	EQUALIZATION_PHASE3_SUCCESS_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
2	EQUALIZATION_PHASE2_SUCCESS_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
1	EQUALIZATION_PHASE1_SUCCESS_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
0	EQUALIZATION_COMPLETE_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if the Transmitter Equalization procedure at 32.0 GT/s has completed. This bit is sticky.

BXXD00F0x510 (NBIFEPF0CFG::RECEIVED_MODIFIED_TS_DATA1)

Bits Description

31:26 Reserved.

25:24 **TRANSMITTED_ALTERNATE_PROTOCOL_NEGOTIATION_STATUS**. Read-only. Reset: 0h. Indicates the status of the Alternate Protocol Negotiation.**ValidValues:**

Value	Description
0h	Not Supported
1h	Disabled
2h	Failed
3h	Successful

23:0 **TRANSMITTED_MODIFIED_TS_INFORMATION_2**. Read-only. Reset: 00_0000h. When MODIFIED_TS_RECEIVED bit is set, contains the Modified TS Information 2 field from the Modified TS2 transmitted in Configuration.Complete.

BXXD00F0x52[0...F] (NBIFEPF0CFG::LANE_EQUALIZATION_CNTL_32GT)

Read-only.

32.0 [GT/s](#) Lane Equalization Control register. There are 16 lanes (0 ~ 15); the lane number corresponds to "_n*" in the register instance. For example, dev*_func*_instNBIF*_n15_* means "32.0 GT/s Lane 15 Equalization Control register".

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 550h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: 1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,002Bh. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F0x534 (NBIFEPF0CFG::AP_CAP)

Read-only.

The Alternate Protocol Capabilities register identifies Alternate Protocol specific capabilities.

_dev0_func0_instNBIF0_nbio0_aliasHOST; BXXD00F0x534;

Bits	Description
31:9	Reserved.
8	AP_SELECTIVE_ENABLE_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the Alternate Protocol Selective Enable Mask register. For Upstream Ports, this bit is Reserved.
7:0	AP_COUNT. Read-only. Reset: 01h. Indicates the number of Alternate Protocols supported by one or more lanes of the Port.

BXXD00F0x538 (NBIFEPF0CFG::AP_CNTL)

Read-write. Reset: 0000_0000h.

The Alternate Protocol Control register controls Alternate Protocol specific parameters.

Bits Description

31:9 Reserved.

8	AP_NEGOTIATION_GLOBAL_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls a port's ability to perform Alternate Protocol negotiation.
---	--

7:0	AP_INDEX_SELECT. Read-write. Reset: 00h. Controls which lane and which Alternate Protocol for that lane is visible in the Alternate Protocol Data registers.
-----	---

BXXD00F0x53C (NBIFEPF0CFG::AP_DATA1)

Read-only. Reset: 0000_0000h.

The Alternate Protocol Data 1 register reports the values associated with the selected Alternate Protocol.

Bits	Description
31:1	AP_SELECTIVE_ENABLE_MASK_31_1. Read-write. Reset: Fixed,0000_0000h. When Alternate Protocol Negotiation Global Enable bit is set, controls if the corresponding Alternate Protocol is permitted for the lane of the Port. This field is a bit vector that covers all other supported Alternate Protocol for the lanes of the Port. This field is sticky.
0	AP_SELECTIVE_ENABLE_MASK_0. Read-only. Reset: Fixed,0. When Alternate Protocol Negotiation Global Enable bit is set, controls if the corresponding Alternate Protocol is permitted for the lane of the Port. Bit 0 corresponds to the standard PCI Express protocol.

BXXD00F0x570 (NBIFEPF0CFG::PCIE_RTR_ENH_CAP_LIST)

Bits	Description
31	VALID. Read-only. Reset: 0. 0=Values not Ready. 1=Values are Valid. Indicates if the time values reported in this capability structure are valid.
30:24	Reserved.
23:12	DLUP_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following the Downstream Port reporting Data Link Layer Active is set. Encodings are the same as for RESET_TIME.
11:0	RESET_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following a conventional reset. The lower nine bits indicate the value. The upper three bits indicate the scale used for the value, encoded as: 0 = 1 ns; 1 = 32 ns; 2 = 1024 ns; 3 = 32768 ns; 4 = 1048576 ns; 5 = 33554432 ns.

BXXD00F0x578 (NBIFEPF0CFG::RTR_DATA2)

Bits	Description
15:11	Reserved.
10	INT_DIS . Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the ability of a function to generate INTx interrupt Messages.
9	FAST_B2B_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
8	SERR_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to signal upstream, Non-fatal and Fatal errors detected by the function, and the ability of a Port to forward upstream, Non-fatal and Fatal signals received by the Port's secondary interface.
7	AD_STEPPING . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	PARITY_ERROR_RESPONSE . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to log errors in the Master Data Parity Error bit of the Status register.
5	PAL_SNOOP_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	MEM_WRITE_INVALIDATE_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
3	SPECIAL_CYCLE_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
2	BUS_MASTER_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to issue Memory and I/O Read/Write Requests, and the ability of a Port to forward Memory and I/O Read/Write Requests in the upstream direction.
1	MEM_ACCESS_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to accept Memory Space accesses.
0	IO_ACCESS_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to accept I/O Space accesses.

BXXD00F[1...7]x006 (NBIFEPFNCFG::STATUS)

Used to record status information for bus related events on the primary interface.

```

Bits	Description
15	PARITY_ERROR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function receives a poisoned TLP on the primary interface.
14	SIGNALED_SYSTEM_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. For a function with its SERR Enable bit in the Command register set, indicates if the function signals a Non-fatal or Fatal error on the primary interface.
13	RECEIVED_MASTER_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Unsupported Request Completion Status on the primary interface.
12	RECEIVED_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Completer Abort Completion Status on the primary interface.
11	SIGNAL_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function completes a Request using Completer Abort Completion Status on the primary interface.
10:9	DEVSEL_TIMING. Read-only. Reset: Fixed,0h. Does not apply to PCI Express.
8	MASTER_DATA_PARITY_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: For a Requester with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Requester receives a poisoned Completion 2) Requester transmits a poisoned Request. For a Port with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Port receives a poisoned Completion going downstream 2) Port transmits a poisoned Request upstream.
7	FAST_BACK_CAPABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	Reserved.
5	PCI_66_CAP. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	CAP_LIST. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates the presence of a capability list item.
3	INT_STATUS. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if an INTx interrupt Message is pending internally in the function.

2:1	Reserved.
0	IMMEDIATE_READINESS. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is able to successfully complete valid configuration cycles at any time following any type of reset.

BXXD00F[1...7]x008 (NBIFEPFNCFG::REVISION_ID)

Read-only.

Indicates a device specific revision identifier.

`_dev0_func[7:5,3:1]_instNBIF0_nbio0_aliasHOST; BXXD00F[[7:5],[3:1]]x008;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func[3:1]_instNBIF0_nbio1_aliasHOST; BXXD00F[3:1]x008;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func[3:1]_instNBIF1_nbio0_aliasHOST; BXXD00F[3:1]x008;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func[3:1]_instNBIF1_nbio1_aliasHOST; BXXD00F[3:1]x008;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func[2:1]_instNBIF2_nbio0_aliasHOST; BXXD00F[2:1]x008;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func[2:1]_instNBIF2_nbio1_aliasHOST; BXXD00F[2:1]x008;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x008;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev1_func1_instNBIF0_nbio1_aliasHOST; BXXD00F1x008;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func1_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0DEV1EPF1CFGx00000008; NBIO0NBIF0DEV1EPF1CFG=10149000h``_dev0_func[7:1]_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0EPF6CFG,NBIO0NBIF0EPF[6:1]CFGx00000008;``NBIO0NBIF0EPF6CFG,NBIO0NBIF0EPF[6:1]CFG=1014_[7:1]000h``_dev0_func[3:1]_instNBIF1_nbio0_aliasSMN; NBIO0NBIF1EPF[3:1]CFGx00000008; NBIO0NBIF1EPF[3:1]CFG=1024_[3:1]000h``_dev0_func[2:1]_instNBIF2_nbio0_aliasSMN; NBIO0NBIF2EPF[2:1]CFGx00000008; NBIO0NBIF2EPF[2:1]CFG=1054_[2:1]000h``_dev1_func1_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0DEV1EPF1CFGx00000008; NBIO1NBIF0DEV1EPF1CFG=10349000h``_dev0_func[7:1]_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF6CFG,NBIO1NBIF0EPF[6:1]CFGx00000008;``NBIO1NBIF0EPF6CFG,NBIO1NBIF0EPF[6:1]CFG=1034_[7:1]000h``_dev0_func[3:1]_instNBIF1_nbio1_aliasSMN; NBIO1NBIF1EPF[3:1]CFGx00000008; NBIO1NBIF1EPF[3:1]CFG=1044_[3:1]000h``_dev0_func[2:1]_instNBIF2_nbio1_aliasSMN; NBIO1NBIF2EPF[2:1]CFGx00000008; NBIO1NBIF2EPF[2:1]CFG=1074_[2:1]000h`**Bits Description****7:4 MAJOR\_REV\_ID.** Read-only. Bits Description

15:14 Reserved.

13:9 **INT_MESSAGE_NUM.** Read-only. Reset: Fixed,00h. Indicates the MSI/MSI-X vector used for interrupts generated in association with any of the status bits in the PCI Express capability structure.8 **SLOT_IMPLEMENTED.** Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported.**Description:** (Downstream Ports only) Indicates if the Link associated with this Port is connected to a slot. For Upstream Ports, this bit is undefined.7:4 **DEVICE_TYPE.** Read-only. Reset: 0h. Indicates the type of PCI Express device.**ValidValues:**

Value	Description
0h	PCI Express Endpoint
1h	Legacy PCI Express Endpoint
3h-2h	Reserved.
4h	Root Port of PCI Express Root Complex
5h	Upstream Port of PCI Express Switch
6h	Downstream Port of PCI Express Switch
7h	PCI Express to PCI/PCI-X Bridge
8h	PCI/PCI-X to PCI Express Bridge
9h	Root Complex Integrated Endpoint
Ah	Root Complex Event Collector
Fh-Bh	Reserved.

3:0 **VERSION.** Read-only. Reset: 2h. Indicates PCI-SIG defined capability structure version number.

BXXD00F[1...7]x068 (NBIFEPFNCFG::DEVICE_CAP)

Read-only.

The Device Capabilities register identifies device specific capabilities.

31:29 Reserved.

28 **FLR_CAPABLE**. Read-only. Reset: 0. 0=Not Supported. 1=Supported.**Description:** (Endpoints only) Indicates if the function supports Function Level Resets.
For non-Endpoints this field is Reserved.27:26 **CAPTURED_SLOT_POWER_SCALE**. Read-only. Reset: 0h. (Upstream Ports only) Indicates the scale used for the Slot Power Limit Value.**ValidValues:**

Value	Description
0h	1.0x
1h	0.1x
2h	0.01x
3h	0.001x

25:18 **CAPTURED_SLOT_POWER_LIMIT**. Read-only. Reset: 00h. (Upstream Ports only) In combination with the Slot Power Limit Scale value, indicates the upper limit on power supplied by slot.

17 Reserved.

16 **ERR_COR_SUBCLASS_CAPABLE**. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function supports the ERR_COR Subclass field in ERR_COR messages.15 **ROLE_BASED_ERR_REPORTING**. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates the function implements Role-Based Error Reporting functionality.

14:12 Reserved.

11:9 **L1_ACCEPTABLE_LATENCY**. Read-only. Reset: 7h.**Description:** (Endpoints only) Indicates the maximum acceptable latency that an Endpoint can withstand due to the transition from L1 state to L0 state.
For non-Endpoints this field is Reserved.

	ValidValues:	
	Value	Description
	0h	1 us
	1h	2 us
	2h	4 us
	3h	8 us
	4h	16 us
	5h	32 us
	6h	64 us
	7h	No Limit
8:6	L0S_ACCEPTABLE_LATENCY. Read-only. Reset: 6h.	
	Description: (Endpoints only) Indicates the maximum acceptable total latency that Endpoint can withstand due to the transition from L0s state to L0 state. For non-Endpoints this field is Reserved.	
	ValidValues:	
	Value	Description
	0h	64 ns
	1h	128 ns
	2h	256 ns
	3h	512 ns
	4h	1 us
	5h	2 us
	6h	4 us
	7h	No Limit
5	EXTENDED_TAG. Read-only. Reset: Fixed,1. 0=5 Bit Tag Supported. 1=8 Bit Tag Supported. When 10-Bit Tag Requester Supported bit is clear, indicates the maximum supported size of the Tag field as a Requester.	
4:3	PHANTOM_FUNC. Read-only. Reset: Fixed,0h. Indicates the support for use of unclaimed function numbers to extend the number of outstanding transactions allowed by logically combining unclaimed function numbers with the Tag identifier.	
	ValidValues:	
	Value	Description
	0h	No Phantom Functions
	1h	1 Phantom Function
	2h	3 Phantom Functions
	3h	7 Phantom Functions
2:0	MAX_PAYLOAD_SUPPORT. Read-only. Reset: 1h. Indicates the maximum payload size that the function can support for TLPs.	
	ValidValues:	
	Value	Description
	0h	128 Bytes
	1h	256 Bytes
	2h	512 Bytes
	3h	1024 Bytes
	4h	2048 Bytes
	5h	4096 Bytes
	7h-6h	Reserved.

Bits	Description																
15	INITIATE_FLR. Read-write. Reset: 0. 0=Normal Operation. 1=Function Level Reset. Description: (Endpoints only) A write of 1 to this bit initiates Function Level Reset to the function. Reads always return 0. For non-Bridges and non-Endpoints this bit is Reserved.																
14:12	MAX_READ_REQUEST_SIZE. Read-write. Reset: 2h. Controls the maximum Read Request size for the function as a Requester. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>128 Bytes</td></tr> <tr> <td>1h</td><td>256 Bytes</td></tr> <tr> <td>2h</td><td>512 Bytes</td></tr> <tr> <td>3h</td><td>1024 Bytes</td></tr> <tr> <td>4h</td><td>2048 Bytes</td></tr> <tr> <td>5h</td><td>4096 Bytes</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	128 Bytes	1h	256 Bytes	2h	512 Bytes	3h	1024 Bytes	4h	2048 Bytes	5h	4096 Bytes	7h-6h	Reserved.
Value	Description																
0h	128 Bytes																
1h	256 Bytes																
2h	512 Bytes																
3h	1024 Bytes																
4h	2048 Bytes																
5h	4096 Bytes																
7h-6h	Reserved.																
11	NO_SNOOP_EN. Read-write. Reset: 1. 0=Disable. 1=Enable. Controls if the function is permitted to set the No Snoop bit in the Requester Attributes of transactions it initiates that do not require hardware enforced cache coherency.																
10	AUX_POWER_PM_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a function is permitted to draw AUX power independent of PME AUX power. This bit is sticky.																
9	PHANTOM_FUNC_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use unclaimed function numbers as Phantom Functions to extend the number of outstanding transaction identifiers.																
8	EXTENDED_TAG_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use an 8-bit Tag field as a Requester. When both bits are disabled the function is restricted to use a 5-bit Tag field.																
7:5	MAX_PAYLOAD_SIZE. Read-write. Reset: 0h. Controls the maximum TLP payload size for the function.																

	ValidValues:	
	Value	Description
	0h	128 Bytes
	1h	256 Bytes
	2h	512 Bytes
	3h	1024 Bytes
	4h	2048 Bytes
	5h	4096 Bytes
	7h-6h	Reserved.
4	RELAXED_ORD_EN. Read-write. Reset: 1. 0=Disable. 1=Enable. Controls if the function is permitted to set the Relaxed Ordering bit in the Attributes field of transactions it initiates that do not require strong write ordering.	
3	USR_REPORT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Unsupported Requests.	
2	FATAL_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Fatal errors.	
1	NON_FATAL_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Non-fatal errors.	
0	CORR_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of correctable errors.	

BXXD00F[1...7]x06E (NBIFEPFNCFG::DEVICE_STATUS)

Reset: 0000h.

Bits	Description
15:7	Reserved.
6	EMER_POWER_REDUCTION_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: (Upstream Ports only) When Emergency Power Reduction Supported field is 1 or 2, indicates if the function has entered the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.
5	TRANSACTIONS_PEND. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function has issued Non-Posted Requests, on its own behalf, which have not been completed.
4	AUX_PWR. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Functions that require AUX power report this bit as set if AUX power is detected by the function.
3	USR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function received an Unsupported Request.
2	FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Fatal errors detected.
1	NON_FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Non-fatal errors detected.
0	CORR_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of correctable errors detected.

Bits Description31:24 **PORT_NUMBER.** Read-only. Reset: 00h. Indicates the Port number for the Link.

23 Reserved.

22 **ASPM_OPTIONALITY_COMPLIANCE.** Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports the ASPM Optionality functionality.21 **LINK_BW_NOTIFICATION_CAP.** Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported.**Description:** (Downstream Ports only) Indicates if the Port supports the Link Bandwidth Notification status and interrupt mechanisms.
For Upstream Ports, this bit is Reserved.20 **DL_ACTIVE_REPORTING_CAPABLE.** Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported.**Description:** (Downstream Ports only) Indicates if the Port supports the reporting of DL_Active state of the Data Link Control and Management State Machine.
For Upstream Ports, this bit is Reserved.19 **SURPRISE_DOWN_ERR_REPORTING.** Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported.**Description:** (Downstream Ports only) Indicates if the Port supports the detecting and reporting of a Surprise Down error condition.
For Upstream Ports, this bit is Reserved.18 **CLOCK_POWER_MANAGEMENT.** Read-only. Reset: 0. 0=Not Supported. 1=Supported.**Description:** (Upstream Ports only) Indicates if the Port tolerates removal of [REFCLK](#) via the CLKREQ# mechanism when the Link is in L1 or L2/L3 Ready.
For Downstream Ports, this bit is Reserved.17:15 **L1_EXIT_LATENCY.** Read-only. Reset: 0h. Indicates the L1 exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L1 to L0.

	ValidValues:	
	Value	Description
	0h	up to 999 ns
	1h	1 to 1.9 us
	2h	2 to 3.9 us
	3h	4 to 7.9 us
	4h	8 to 15.9 us
	5h	16 to 31.9 us
	6h	32 to 64 us
	7h	more than 64 us
14:12	L0S_EXIT_LATENCY. Read-only. Reset: 0h. Indicates the L0s exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L0s to L0.	
	ValidValues:	
	Value	Description
	0h	up to 63 ns
	1h	64 to 127 ns
	2h	128 to 255 ns
	3h	256 to 511 ns
	4h	512 to 999 ns
	5h	1 to 1.9 us
	6h	2 to 4 us
	7h	more than 4 us
11:10	PM_SUPPORT. Read-only. Reset: 3h. Indicates the level of ASPM supported on the Link.	
	ValidValues:	
	Value	Description
	0h	No ASPM Supported
	1h	L0s Supported
	2h	L1 Supported
	3h	L0s and L1 Supported
9:4	LINK_WIDTH. Read-only. Reset: 10h. Indicates the maximum width of the Link.	
	ValidValues:	
	Value	Description
	00h	Reserved.
	01h	x1
	02h	x2
	03h	Reserved.
	04h	x4
	07h-05h	Reserved.
	08h	x8
	0Bh-09h	Reserved.
	0Ch	x12
	0Fh-0Dh	Reserved.
	10h	x16
	1Fh-11h	Reserved.
	20h	x32
	3Fh-21h	Reserved.
3:0	LINK_SPEED. Read-only. Reset: 5h. Indicates the maximum speed of the Link.	

	ValidValues:	
	Value	Description
	0h	Reserved.
	1h	2.5 GT/s
	2h	5.0 GT/s
	3h	8.0 GT/s
	4h	16.0 GT/s
	5h	32.0 GT/s
	Fh-6h	Reserved.

Bits	Description
15:14	DRS_SIGNALING_CONTROL. Read-write. Reset: Fixed,0h. For Upstream Ports, this field is Reserved.
13:12	Reserved.
11	LINK_AUTONOMOUS_BW_INT_EN. Read-only. Reset: Fixed,0. For Upstream Ports, this bit is Reserved.
10	LINK_BW_MANAGEMENT_INT_EN. Read-only. Reset: Fixed,0. For Upstream Ports, this bit is Reserved.
9	HW_AUTONOMOUS_WIDTH_DISABLE. Read-write. Reset: Fixed,0. 0=Enable. 1=Disable. Controls the Port's ability to autonomously direct changes in link width.
8	CLOCK_POWER_MANAGEMENT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Upstream Ports only) Controls if the function is permitted to use CLKREQ# signal to power manage the Link clock. For Downstream Ports, this bit is Reserved.
7	EXTENDED_SYNC. Read-write. Reset: 0. 0=Disable. 1=Enable. Forces the transmission of additional ordered sets, exiting the L0s or Recovery states.
6	COMMON_CLOCK_CFG. Read-write. Reset: 0. 0=Same REFCLK not Used. 1=Same REFCLK Used. Indicates if this component and the component at the opposite end of this Link are operating with a distributed common reference clock.
5	RETRAIN_LINK. Read-only. Reset: Fixed,0. For Upstream Ports, this bit is Reserved
4	LINK_DIS. Read-write. Reset: Fixed,0. 0=Normal Operation. 1=Disable Link. Description: (Downstream Ports only) Disables the Link when set to 1, by directing the Physical Layer LTSSM to the Disabled state. For Upstream Ports, this bit is Reserved.
3	READ_CPL_BOUNDARY. Read-write. Reset: Fixed,0. 0=64 Byte. 1=128 Byte. Description: Indicates the RCB value for the Root Port sourcing the topology associated with the Link. For Switches, this bit is Reserved.
2	PTM_PROP_DELAY_ADAPT_INTER_B. Read-write. Reset: Fixed,0. 0=Interpretation A. 1=Interpretation B. Description: Controls the interpretation of the Propagation Delay[31:0] field of the PTM Message. For devices that don't support PTM, this bit is Reserved.
1:0	PM_CONTROL. Read-write. Reset: 0h. Controls the level of ASPM enabled on the Link.

ValidValues:		
Value	Description	
0h	Disabled	
1h	Tx_L0s Entry Enabled	
2h	L1 Entry Enabled	
3h	Tx_L0s and L1 Entry Enabled

Bits	Description
15	LINK_AUTONOMOUS_BW_STATUS. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates that hardware has autonomously changed the Link's speed or width, without the Port transitioning through DL_Down status, for reasons other than to attempt to correct unreliable Link operation.
14	LINK_BW_MANAGEMENT_STATUS. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Description: Indicates that either of the following has occurred without the Port transitioning through DL_Down status: A Link retraining has completed following a write of 1 to the Retrain Link bit. Hardware has changed the Link's speed or width to attempt to correct unreliable Link operation, either through an LTSSM timeout or a higher level process.
13	DL_ACTIVE. Read-only. Reset: Fixed,0. 0=Not DL_Active state. 1=DL_Active state. If Data Link Layer Link Active Capability is supported and when the optionally supported SFI DLL State Mask bit is clear, indicates the status of the Data Link Control and Management State Machine.
12	SLOT_CLOCK_CFG. Read-only. Reset: Fixed,1. 0=Same REFCLK not Required. 1=Same REFCLK Required. Indicates if the component uses the same physical reference clock that the platform provides on the connector.
11	LINK_TRAINING. Read-only. Reset: Fixed,0. 0=Normal. 1=Link Training in Progress. Description: (Downstream Ports only) Indicates that Link training is in progress (Physical Layer LTSSM in Configuration or Recovery state) or that 1 was written to the Retrain Link bit but Link training has not yet begun. Hardware clears this bit once Link training is complete. For Upstream Ports, this bit is Reserved.
10	Reserved.
9:4	NEGOTIATED_LINK_WIDTH. Read-only. Reset: 10h. Indicates the negotiated width of the Link.

	ValidValues:	
	Value	Description
	00h	Reserved.
	01h	x1
	02h	x2
	03h	Reserved.
	04h	x4
	07h-05h	Reserved.
	08h	x8
	0Bh-09h	Reserved.
	0Ch	x12
	0Fh-0Dh	Reserved.
	10h	x16
	1Fh-11h	Reserved.
	20h	x32
	3Fh-21h	Reserved.
3:0	CURRENT_LINK_SPEED. Read-only. Reset: 5h. Indicates the negotiated speed of the Link.	
	ValidValues:	
	Value	Description
	0h	Reserved.
	1h	2.5 GT/s
	2h	5.0 GT/s
	3h	8.0 GT/s
	4h	16.0 GT/s
	5h	32.0 GT/s
	Fh-6h	Reserved.

BXXD00F[1...7]x088 (NBIFEPFNCFG::DEVICE_CAP2)

Read-only.

The Device Capabilities 2 register identifies device specific capabilities.

`_dev0_func[7:5,3:1]_instNBIF0_nbio0_aliasHOST; BXXD00F[[7:5],[3:1]]x088;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func[3:1]_instNBIF0_nbio1_aliasHOST; BXXD00F[3:1]x088;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func[3:1]_instNBIF1_nbio0_aliasHOST; BXXD00F[3:1]x088;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func[3:1]_instNBIF1_nbio1_aliasHOST; BXXD00F[3:1]x088;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev0_func[2:1]_instNBIF2_nbio0_aliasHOST; BXXD00F[2:1]x088;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_func[2:1]_instNBIF2_nbio1_aliasHOST; BXXD00F[2:1]x088;``BXX=NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF2SWDS_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x088;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio0_aliasSMN[SECONDARY_BUS]``_dev1_func1_instNBIF0_nbio1_aliasHOST; BXXD00F1x088;``BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]``_dev1_func1_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0DEV1EPF1CFGx00000088; NBIO0NBIF0DEV1EPF1CFG=10149000h``_dev0_func[7:1]_instNBIF0_nbio0_aliasSMN; NBIO0NBIF0EPF6CFG,NBIO0NBIF0EPF[6:1]CFGx00000088;``NBIO0NBIF0EPF6CFG,NBIO0NBIF0EPF[6:1]CFG=1014_[7:1]000h``_dev0_func[3:1]_instNBIF1_nbio0_aliasSMN; NBIO0NBIF1EPF[3:1]CFGx00000088; NBIO0NBIF1EPF[3:1]CFG=1024_[3:1]000h``_dev0_func[2:1]_instNBIF2_nbio0_aliasSMN; NBIO0NBIF2EPF[2:1]CFGx00000088; NBIO0NBIF2EPF[2:1]CFG=1054_[2:1]000h``_dev1_func1_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0DEV1EPF1CFGx00000088; NBIO1NBIF0DEV1EPF1CFG=10349000h``_dev0_func[7:1]_instNBIF0_nbio1_aliasSMN; NBIO1NBIF0EPF6CFG,NBIO1NBIF0EPF[6:1]CFGx00000088;``NBIO1NBIF0EPF6CFG,NBIO1NBIF0EPF[6:1]CFG=1034_[7:1]000h``_dev0_func[3:1]_instNBIF1_nbio1_aliasSMN; NBIO1NBIF1EPF[3:1]CFGx00000088; NBIO1NBIF1EPF[3:1]CFG=1044_[3:1]000h``_dev0_func[2:1]_instNBIF2_nbio1_aliasSMN; NBIO1NBIF2EPF[2:1]CFGx00000088; NBIO1NBIF2EPF[2:1]CFG=1074_[2:1]000h`**Bits Description**

31	FRS_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function supports Function Readiness Status capability.
----	---

30:27	Reserved.
-------	-----------

26	EMER_POWER_REDUCTION_INIT_REQ. Read-only. Reset: 0. 0=Initialization not Required. 1=Initialization Required.
----	--

Description: (Upstream Ports only) Indicates if the function requires software initialization upon exiting the Emergency Power Reduction state.
For Downstream Ports, this bit is Reserved.

25:24	EMER_POWER_REDUCTION_SUPPORTED. Read-only. Reset: 0h.
-------	--

Description: (Upstream Ports only) Indicates if the function supports the Emergency Power Reduction mechanism.
For Downstream Ports, this bit is Reserved.

ValidValues:

Value	Description
0h	Not Supported
1h	Supported using Device Specific mechanism
2h	Supported using Form Factor or Device Specific mechanisms
3h	Reserved.

23:22	MAX_END_END_TLP_PREFIXES. Read-only. Reset: 0h. Indicates the maximum number of End-End TLP Prefixes supported by a function with End-End TLP Prefix Supported set. If End-End TLP Prefix Supported bit is not set, this field is Reserved.
-------	--

	ValidValues:	
	Value	Description
	0h	4 E-E TLP Prefixes Supported
	1h	1 E-E TLP Prefix Supported
	2h	2 E-E TLP Prefixes Supported
	3h	3 E-E TLP Prefixes Supported
21	END_END_TLP_PREFIX_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports receiving End-End TLP Prefixes.	
20	EXTENDED_FMT_FIELD_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the 3-bit definition of the Fmt field. When not set, the function supports only the 2-bit definition of the Fmt field.	
19:18	OBFF_SUPPORTED. Read-only. Reset: 0h. Indicates if the function supports Optimized Buffer Flush/Fill signaling.	
	ValidValues:	
	Value	Description
	0h	OBFF not Supported
	1h	OBFF using Message Supported
	2h	OBFF using WAKE# Supported
	3h	OBFF using WAKE# and Message Supported
17	TEN_BIT_TAG_REQUESTER_SUPPORTED. Read-only. Reset: 0. 0=Use Extended Tag Field Supported. 1=10-Bit Tag Supported. Indicates the maximum supported size of the Tag field as a Requester.	
16	TEN_BIT_TAG_COMPLETER_SUPPORTED. Read-only. Reset: 1. 0=8-Bit Tag Supported. 1=10-Bit Tag Supported. Indicates the maximum supported size of the Tag field as a Completer.	
15:14	LN_SYSTEM_CLS. Read-only. Reset: Fixed,0h. For Root Ports, indicates if the Root Port supports LN protocol as an LN Completer.	
	ValidValues:	
	Value	Description
	0h	LN Completer not Supported
	1h	LN Completer with 64 byte cachelines
	2h	LN Completer with 128 byte cachelines
	3h	Reserved.
13:12	TPH_CPLR_SUPPORTED. Read-only. Reset: 0h. For Root Ports and Endpoints, indicates if the Completer supports TPH or Extended TPH. For all other functions, this field is Reserved.	
	ValidValues:	
	Value	Description
	0h	TPH and Extended TPH Completer not Supported
	1h	TPH Completer Supported and Extended TPH Completer not Supported
	2h	Reserved.
	3h	TPH and Extended TPH Completer Supported
11	LTR_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the Latency Tolerance Reporting mechanism.	
10	NO_RO_ENABLED_P2P_PASSING. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported.	
	Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a routing element supports never allowing posted requests with Relaxed Ordering attribute bit set, to pass each other. For Endpoints, this bit is Reserved.	
9	CAS128_CMPLT_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 128-bit AtomicOp completer.	
8	ATOMICOP_64CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 64-bit AtomicOp completer.	

7	ATOMICOP_32CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 32-bit AtomicOp completer.																						
6	ATOMICOP_ROUTING_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a Port supports AtomicOp routing. For Endpoints, this bit is Reserved.																						
5	ARI_FORWARDING_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if a Port supports ARI forwarding. For Upstream Ports, this bit is Reserved.																						
4	CPL_TIMEOUT_DIS_SUPPORTED. Read-only. 0=Not Supported. 1=Supported. Indicates if a Requester supports the Completion Timeout disable mechanism. For functions that don't issue requests, this field is Reserved.																						
3:0	CPL_TIMEOUT_RANGE_SUPPORTED. Read-only. Indicates if a Requester supports the Completion Timeout programmability mechanism. For functions that don't issue requests, this field is Reserved. ValidValues:																						
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Fixed</td></tr> <tr> <td>1h</td><td>Range A Supported</td></tr> <tr> <td>2h</td><td>Range B Supported</td></tr> <tr> <td>3h</td><td>Ranges A & B Supported</td></tr> <tr> <td>5h-4h</td><td>Reserved.</td></tr> <tr> <td>6h</td><td>Ranges B & C Supported</td></tr> <tr> <td>7h</td><td>Ranges A & B & C Supported</td></tr> <tr> <td>Dh-8h</td><td>Reserved.</td></tr> <tr> <td>Eh</td><td>Ranges B & C & D Supported</td></tr> <tr> <td>Fh</td><td>Ranges A & B & C & D Supported</td></tr> </table>	Value	Description	0h	Fixed	1h	Range A Supported	2h	Range B Supported	3h	Ranges A & B Supported	5h-4h	Reserved.	6h	Ranges B & C Supported	7h	Ranges A & B & C Supported	Dh-8h	Reserved. Bits	Description										
15	END_END_TLP_PREFIX_BLOCKING. Read-only. 0=Disable. 1=Enable. For Endpoints, this bit is Reserved.										
14:13	OBFF_EN. Read-write. Reset: 0h. Controls if the function is permitted to use Optimized Buffer Flush/Fill signaling. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Disable</td></tr> <tr> <td>1h</td><td>Enable OBFF Message A</td></tr> <tr> <td>2h</td><td>Enable OBFF Message B</td></tr> <tr> <td>3h</td><td>Enable OBFF WAKE#</td></tr> </table>	Value	Description	0h	Disable	1h	Enable OBFF Message A	2h	Enable OBFF Message B	3h	Enable OBFF WAKE#
Value	Description										
0h	Disable										
1h	Enable OBFF Message A										
2h	Enable OBFF Message B										
3h	Enable OBFF WAKE#										
12	TEN_BIT_TAG_REQUESTER_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a function is permitted to use a 10-bit Tag field as a Requester. When disabled the function uses the setting in the Extended Tag Field Enable bit.										
11	EMER_POWER_REDUCTION_REQUEST. Read-write. Reset: 0. 0=Normal Operation. 1=Enter Emergency Power Reduction state. Description: (Upstream Ports only) Triggers the function to enter the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.										
10	LTR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port is permitted to use the Latency Tolerance Reporting mechanism.										
9	IDO_COMPLETION_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of completions it returns.										
8	IDO_REQUEST_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of requests it initiates.										
7	ATOMICOP_EGRESS_BLOCKING. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Description: (Downstream Ports or Switch Upstream Ports only) Controls the ability of a Port to block AtomicOps that target going out of this Egress Port. For Endpoints, this bit is Reserved.										
6	ATOMICOP_REQUEST_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to initiate AtomicOp requests.										

5	ARI_FORWARDING_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Description: (Downstream Ports only) Controls the ability of a Port to allow Configuration requests for Device Numbers greater than 0, when converting from a Type 1 Configuration cycle to a Type 0 Configuration cycle. For Upstream Ports, this bit is Reserved.																												
4	CPL_TIMEOUT_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the ability of a function to use the completion timeout mechanism.																												
3:0	CPL_TIMEOUT_VALUE. Read-write. Reset: 0h. Controls the completion timeout value for the function. ValidValues:																												
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>50 us to 50 ms (Fixed)</td></tr> <tr> <td>1h</td><td>50 to 100 us (Range A only)</td></tr> <tr> <td>2h</td><td>1 to 10 ms (Range A only)</td></tr> <tr> <td>4h-3h</td><td>Reserved.</td></tr> <tr> <td>5h</td><td>16 to 55 ms (Range B only)</td></tr> <tr> <td>6h</td><td>65 to 210 ms (Range B only)</td></tr> <tr> <td>8h-7h</td><td>Reserved.</td></tr> <tr> <td>9h</td><td>260 to 900 ms (Range C only)</td></tr> <tr> <td>Ah</td><td>1 to 3.5 s (Range C only)</td></tr> <tr> <td>Ch-Bh</td><td>Reserved.</td></tr> <tr> <td>Dh</td><td>4 to 13 s (Range D only)</td></tr> <tr> <td>Eh</td><td>17 to 64 s (Range D only)</td></tr> <tr> <td>Fh</td><td>Reserved.</td></tr> </table>	Value	Description	0h	50 us to 50 ms (Fixed)	1h	50 to 100 us (Range A only)	2h	1 to 10 ms (Range A only)	4h-3h	Reserved.	5h	16 to 55 ms (Range B only)	6h	65 to 210 ms (Range B only)	8h-7h	Reserved.	9h	260 to 900 ms (Range C only)	Ah	1 to 3.5 s (Range C only)	Ch-Bh	Reserved. Bits Description

15:12 **COMPLIANCE_DEEMPHASIS**. Read-write. Reset: 0h.

Description: At 5.0 [GT/s](#) only, when using Enter Compliance bit, this field controls the Port's transmitter de-emphasis level in compliance mode.

At 8.0 GT/s or higher only, when using Enter Compliance bit, this field controls the Port's transmitter Preset setting in compliance mode. This field is sticky.

ValidValues:

Value	Description
0h	DeEmph -6.0 dB, Preshoot 0.0 dB (8.0 GT/s or higher) or -6.0 dB (5.0 GT/s)
1h	DeEmph -3.5 dB, Preshoot 0.0 dB (8.0 GT/s or higher) or -3.5 dB (5.0 GT/s)
2h	DeEmph -4.4 dB, Preshoot 0.0 dB
3h	DeEmph -2.5 dB, Preshoot 0.0 dB
4h	DeEmph -0.0 dB, Preshoot 0.0 dB
5h	DeEmph -0.0 dB, Preshoot 1.9 dB
6h	DeEmph -0.0 dB, Preshoot 2.5 dB
7h	DeEmph -6.0 dB, Preshoot 3.5 dB
8h	DeEmph -3.5 dB, Preshoot 3.5 dB
9h	DeEmph -0.0 dB, Preshoot 3.5 dB
Ah	DeEmph variable, Preshoot 0.0 dB
Fh-Bh	Reserved.

11 **COMPLIANCE_SOS**. Read-write. Reset: 0. 0=Disable. 1=Enable. At 5.0 [GT/s](#) or lower only, controls if the Port's transmitter inserts SKP ordered sets when sending either compliance pattern. This bit is sticky.

10 **ENTER_MOD_COMPLIANCE**. Read-write. Reset: 0. 0=Compliance Pattern. 1=Modified Compliance Pattern. Controls which compliance pattern the Port transmits, when Enter Compliance bit is used to enter compliance mode. This bit is sticky.

9:7 **XMIT_MARGIN**. Read-write. Reset: 0h. Controls the value of the non-deemphasized voltage level at the Port's transmitter pins. This field is sticky.

6	SELECTABLE_DEEMPHASIS . Read-only. Reset: Fixed,0. 0=-6.0 dB. 1=-3.5 dB. (Downstream Ports only) At 5.0 GT/s only, controls the Port's transmitter de-emphasis level.																
5	HW_AUTONOMOUS_SPEED_DISABLE . Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the Port's ability to autonomously direct changes in link speed. This bit is sticky.																
4	ENTER_COMPLIANCE . Read-write. Reset: 0. 0=Normal Operation. 1=Enter Compliance. Forces a Port to enter compliance mode, when it receives a hot reset. This bit is sticky, but for Upstream Ports only is cleared if the link state goes to Detect.																
3:0	TARGET_LINK_SPEED . Read-write. Reset: 0h. (Downstream Ports only) Controls the upper limit on the Link operational speed by restricting the data rate values advertised by the upstream component. When using Enter Compliance bit, this field controls the Port's target compliance mode speed. This field is sticky.

Bits	Description																
15	DRS_MESSAGE_RECEIVED. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Description: (Downstream Ports only) When DRS Supported bit is set and When the optionally supported SFI DRS Mask bit is clear, indicates if the Port has received a DRS Message. For Upstream Ports, this bit is Reserved.																
14:12	DOWNSTREAM_COMPONENT_PRESENCE. Read-only. Reset: Fixed,0h. Description: (Downstream Ports only) When DRS Supported bit is set, this field indicates the presence and DRS state of the downstream component (if any). For Upstream Ports, this bit is Reserved. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Link Down, Presence not Determined</td></tr> <tr> <td>1h</td><td>Link Down, Component not Present</td></tr> <tr> <td>2h</td><td>Link Down, Component Present and Data Link Layer not Active</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> <tr> <td>4h</td><td>Link Up, Component Present and DRS Message not Received</td></tr> <tr> <td>5h</td><td>Link Up, Component Present and DRS Message Received</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Link Down, Presence not Determined	1h	Link Down, Component not Present	2h	Link Down, Component Present and Data Link Layer not Active	3h	Reserved.	4h	Link Up, Component Present and DRS Message not Received	5h	Link Up, Component Present and DRS Message Received	7h-6h	Reserved.
Value	Description																
0h	Link Down, Presence not Determined																
1h	Link Down, Component not Present																
2h	Link Down, Component Present and Data Link Layer not Active																
3h	Reserved.																
4h	Link Up, Component Present and DRS Message not Received																
5h	Link Up, Component Present and DRS Message Received																
7h-6h	Reserved.																
11:10	Reserved.																
9:8	CROSSLINK_RESOLUTION. Read-only. Reset: Fixed,0h. Indicates the state of the Port's crosslink negotiation (if supported). ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>No Information</td></tr> <tr> <td>1h</td><td>Completed as Upstream Port</td></tr> <tr> <td>2h</td><td>Completed as Downstream Port</td></tr> <tr> <td>3h</td><td>In Progress</td></tr> </table>	Value	Description	0h	No Information	1h	Completed as Upstream Port	2h	Completed as Downstream Port	3h	In Progress						
Value	Description																
0h	No Information																
1h	Completed as Upstream Port																
2h	Completed as Downstream Port																
3h	In Progress																

7	RTM2_PRESENCE_DET. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. When Two Retimers Presence Detect Supported bit is set, indicates if the Port detected two Retimers in the most recent link negotiation. This bit is sticky.
6	RTM1_PRESENCE_DET. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. When Retimer Present Detect Supported bit is set, indicates if the Port detected a Retimer in the most recent link negotiation. This bit is sticky.
5	LINK_EQUALIZATION_REQUEST_8GT. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 8.0 GT/s link equalization to be performed. This bit is sticky.
4	EQUALIZATION_PHASE3_SUCCESS_8GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
3	EQUALIZATION_PHASE2_SUCCESS_8GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
2	EQUALIZATION_PHASE1_SUCCESS_8GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
1	EQUALIZATION_COMPLETE_8GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the 8.0 GT/s Transmitter Equalization procedure has completed. This bit is sticky.
0	CUR_DEEMPHASIS_LEVEL. Read-only. Reset: 1. 0=-6.0 dB. 1=-3.5 dB. At 5.0 GT/s only, indicates the Port's transmitter de-emphasis level.

Bits	Description
15	MSIX_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. When MSI_EN bit is clear, controls the ability of a function to generate MSI-X requests.
14	MSIX_FUNC_MASK. Read-write. Reset: 0. 0=Only Vectors with per-vector Mask set are Masked. 1=All Vectors are Masked. Controls if all of the vectors associated with the function are masked, regardless of their per-vector Mask bit values.
13:11	Reserved.
10:0	MSIX_TABLE_SIZE. Read-only. Indicates the MSI-X Table Size (minus one).

BXXD00F[1...7]x0C4 (NBIFEPFNCFG::MSIX_TABLE)

Read-only.

MSI-X Table Offset and Table BIR register.

Bits Description

31:3 **MSIX_TABLE_OFFSET.** Read-only. Indicates the offset from the address value contained in the [BAR](#) defined by MSIX_TABLE_BIR field, to point to the start of the MSI-X Table. The offset value must be padded with 3 bits of zero, to form a QWORD-aligned offset.

2:0 **MSIX_TABLE_BIR.** Read-only. Indicates the [BAR](#) whose allocated address range contains the MSI-X Table.

ValidValues:

Value	Description
0h	BAR at offset 0x10
1h	BAR at offset 0x14
2h	BAR at offset 0x18
3h	BAR at offset 0x1C
4h	BAR at offset 0x20
5h	BAR at offset 0x24
7h-6h	Reserved.

BXXD00F[1...7]x0C8 (NBIFEPFNCFG::MSIX_PBA)

Read-only.

MSI-X [PBA](#) Offset and PBA BIR register.

Bits Description31:24 **SATA_CAP_RESERVED2**. Read-only. Reset: Fixed,00h. Reserved.23:4 **SATA_CAP_BAR_OFFSET**. Read-only. Reset: Fixed,0_0000h. When SATA_CAP_BAR_LOC field is 0 to 5, indicates the offset from the address value contained in the [BAR](#) defined by SATA_CAP_BAR_LOC field, to point to the start of the Index-Data pair. The offset value must be padded with 2 bits of zero, to form a DWORD-aligned offset.3:0 **SATA_CAP_BAR_LOC**. Read-only. Reset: Fixed,Fh. Indicates the [BAR](#) whose allocated address range contains the Index-Data pair.**ValidValues:**

Value	Description
0h	BAR at offset 0x10
1h	BAR at offset 0x14
2h	BAR at offset 0x18
3h	BAR at offset 0x1C
4h	BAR at offset 0x20
5h	BAR at offset 0x24
Eh-6h	Reserved.
Fh	Index-Data pair is implemented in two DWORDs directly following SATA_CAP_1 register

BXXD00F[1...7]x0D8 (NBIFEPFNCFG::SATA_IDP_INDEX)

IDP Index register.

Bits	Description
31:27	Reserved.
26	POISONED_TLP_EGRESS_BLOCKED_SEVERITY . Read-only. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Poisoned TLP Egress Blocked Error.
25	TLP_PREFIX_BLOCKED_ERR_SEVERITY . Read-only. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports a TLP Prefix Blocked Error.
24	ATOMICOP_EGRESS_BLOCKED_SEVERITY . Read-write. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports an AtomicOp Egress Blocked Error.
23	MC_BLOCKED_TLP_SEVERITY . Read-write. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports a MC Blocked TLP Error. This bit is sticky.
22	UNCORR_INT_ERR_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an ECRC Error. This bit is sticky.
18	MAL_TLP_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Receiver Overflow Error.
16	UNEXP_CPL_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Completion Timeout Error. This bit is sticky.

13	FC_ERR_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Flow Control Protocol Error.
12	PSN_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Poisoned TLP Received Error. This bit is sticky.
11:6	Reserved.
5	SURPDN_ERR_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. (Downstream Ports only) Controls how the function reports a Surprise Down Error.
4	DLP_ERR_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD00F[1...7]x160 (NBIFEPFNCFG::PCIE_CORR_ERR_STATUS)

The Correctable Error Status register reports error status of individual correctable errors in a function.

```

Bits	Description
31:13	Reserved.
12	COMPLETION_TIMEOUT_LOG_CAPABLE. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording the TLP Prefix (if any) and the Header for the TLP corresponding to a detected Completion Timeout error.
11	TLP_PREFIX_LOG_PRESENT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. When the First Error Pointer is valid, indicates that the TLP Prefix Log register contains valid information. This bit is sticky. If End-End TLP Prefix Supported bit is not set, this bit is Reserved.
10	MULTI_HDR_RECD_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the function is permitted to record more than one error header.
9	MULTI_HDR_RECD_CAP. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording more than one error header.
8	ECRC_CHECK_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function checks ECRC. This bit is sticky.
7	ECRC_CHECK_CAP. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of checking ECRC.
6	ECRC_GEN_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function generates ECRC. This bit is sticky.
5	ECRC_GEN_CAP. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of generating ECRC.
4:0	FIRST_ERR_PTR. Read-only. Reset: 00h. Indicates the bit position of the first error reported in the Uncorrectable Error Status register. This field is only valid if the indicated bit is also set. This field is sticky.

Bits Description

31:16 **BAR_SIZE_SUPPORTED_UPPER.** Read-only. Reset: 0000h. Indicates that the function supports operating with the specified [BAR](#) sizes. This field is a bit vector that covers the size range of 256 TB to 8 EB.

15:14 Reserved.

13:8 **BAR_SIZE.** Read-write. Reset: 00h. Controls the size of the address space that the [BAR](#) resource is requesting. The encoded values range from 0 (1 [MB](#)) to 43 (8 EB), with each incremented value indicating double the previous size.

7:5 **BAR_TOTAL_NUM.** Read-only. Reset: 1h. Indicates the total number of resizable BARs in the capability structure for the function.

4:3 Reserved.

2:0 **BAR_INDEX.** Read-only. Reset: 0h. Indicates the [BAR](#) controlled by this register.

ValidValues:

Value	Description
0h	BAR at offset 0x10
1h	BAR at offset 0x14
2h	BAR at offset 0x18
3h	BAR at offset 0x1C
4h	BAR at offset 0x20
5h	BAR at offset 0x24
7h-6h	Reserved.

BXXD00F[1...7]x20C (NBIFEPFNCFG::PCIE_BAR2_CAP)

Read-only. Reset: 0000_0000h.

Resizable BAR2 Capability register.

Bits Description

31:21 Reserved.

20:18 **POWER_RAIL**. Read-only. Reset: 1h. Indicates the thermal load or power rail of the operating condition being described.**ValidValues:**

Value	Description
0h	12 V
1h	3.3 V
2h	1.5 or 1.8 V
6h-3h	Reserved.
7h	Thermal

17:15 **TYPE**. Read-only. Reset: 7h. Indicates the type of the operating condition being described.**ValidValues:**

Value	Description
0h	PME Aux
1h	Auxiliary
2h	Idle
3h	Sustained
4h	Sustained in Emergency Power Reduction
5h	Maximum in Emergency Power Reduction
6h	Reserved.
7h	Maximum

14:13 **PM_STATE**. Read-only. Reset: 0h. Indicates the power management state of the operating condition being described.

	ValidValues:	
	Value	Description
	0h	D0
	1h	D1
	2h	D2
	3h	D3
12:10	PM_SUB_STATE. Read-only. Reset: 0h. Indicates the power management sub-state of the operating condition being described.	
9:8	DATA_SCALE. Read-only. Reset: 1h. Indicates the scale used for the Base Power value.	
	ValidValues:	
	Value	Description
	0h	1.0x
	1h	0.1
	2h	0.01x
	3h	0.001x
7:0	BASE_POWER. Read-only. Reset: 00h. In combination with the Data Scale value, indicates in Watts the base power value in the given operating condition.	

BXXD00F[1...7]x24C (NBIFEPFNCFG::PCIE_PWR_BUDGET_CAP)

Read-only. Reset: 00h.

Power Budget Capability register.

Bits Description

31:24 **TRANS_LAT_VAL_1**. Read-only. Reset: 00h. In combination with the Transition Latency Unit value, indicates the transition latency value 1. The Transition Latency Indicator Bits field can use this value to indicate the maximum transition latency for a substate.

23:16 **TRANS_LAT_VAL_0**. Read-only. Reset: 00h. In combination with the Transition Latency Unit value, indicates the transition latency value 0. The Transition Latency Indicator Bits field can use this value to indicate the maximum transition latency for a substate.

15:14 Reserved.

13:12 **PWR_ALLOC_SCALE**. Read-only. Reset: 0h. Indicates the scale used for the Substate Power Allocation value.**ValidValues:**

Value	Description
0h	10x
1h	1x
2h	0.1x
3h	0.01x

11:10 Reserved.

9:8 **TRANS_LAT_UNIT**. Read-only. Reset: 0h. Indicates the unit used for the Transition Latency Value 0/1 value.**ValidValues:**

Value	Description
0h	1 ms
1h	10 ms
2h	100 ms
3h	Reserved.

7:5 Reserved.

4:0 **SUBSTATE_MAX**. Read-only. Reset: 00h. Indicates the maximum substate number (plus one) supported by the function.

BXXD00F[1...7]x258 (NBIFEPFNCFG::PCIE_DPA_LATENCY_INDICATOR)

Read-only. Reset: 0000_0000h.

Bits	Description
15:8	EGRESS_CONTROL_VECTOR_SIZE. Read-only. Reset: Fixed,00h. When ACS P2P Egress Control bit is set, a non-zero value indicates the number of bits in the Egress Control Vector, while a value of 0 indicates 256 bits in the Egress Control Vector.
7	ENHANCED_CAPABILITY. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Enhanced Capability.
6	DIRECT_TRANSLATED_P2P. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Direct Translated P2P.
5	P2P_EGRESS_CONTROL. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS P2P Egress Control.
4	UPSTREAM_FORWARDING. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Upstream Forwarding.
3	P2P_COMPLETION_REDIRECT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS P2P Completion Redirect.
2	P2P_REQUEST_REDIRECT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS P2P Request Redirect.
1	TRANSLATION_BLOCKING. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Translation Blocking.
0	SOURCE_VALIDATION. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Source Validation.

BXXD00F[1...7]x2A6 (NBIFEPFNCFG::PCIE_ACS_CNTL)

ACS Control register.

Bits	Description										
15:13	Reserved.										
12	UNCLAIMED_REQUEST_REDIRECT_CNTL. Read-write. Reset: 0. 0=Unsupported Request. 1=Forwarded upstream. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port memory aperture which is not within any of the component's Switch Downstream Port memory aperture or BAR claimed memory space.										
11:10	USP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port BAR claimed memory space. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Request allowed</td></tr> <tr> <td>1h</td><td>Request blocked</td></tr> <tr> <td>2h</td><td>Request redirected</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Request allowed	1h	Request blocked	2h	Request redirected	3h	Reserved.
Value	Description										
0h	Request allowed										
1h	Request blocked										
2h	Request redirected										
3h	Reserved.										
9:8	DSP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's BAR claimed memory space. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Request allowed</td></tr> <tr> <td>1h</td><td>Request blocked</td></tr> <tr> <td>2h</td><td>Request redirected</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Request allowed	1h	Request blocked	2h	Request redirected	3h	Reserved.
Value	Description										
0h	Request allowed										
1h	Request blocked										
2h	Request redirected										
3h	Reserved.										
7	IO_REQUEST_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component handles upstream I/O Requests as ACS Violations.										
6	DIRECT_TRANSLATED_P2P_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component overrides the ACS P2P Request Redirect and ACS P2P Egress Control mechanisms with P2P Memory Requests whose Address Translation field indicates a Translated address.										

5	P2P_EGRESS_CONTROL_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. In conjunction with the Egress Control Vector plus the ACS P2P Request Redirect and ACS Direct Translated P2P mechanisms, controls when to allow, disallow, or redirect P2P Requests.
4	UPSTREAM_FORWARDING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component forwards Upstream any Request or Completion TLPs it receives that were redirected Upstream by a component lower in the hierarchy.
3	P2P_COMPLETION_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component redirects P2P Completions Upstream; applicable only to Read Completions whose Relaxed Ordering Attribute is clear.
2	P2P_REQUEST_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. In conjunction with ACS P2P Egress Control and ACS Direct Translated P2P mechanisms, controls if the component redirects P2P Requests Upstream.
1	TRANSLATION_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component blocks all Upstream Memory Requests whose Address Translation field is not set to the default value.
0	SOURCE_VALIDATION_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component validates the Bus Number from the Requester ID of Upstream Requests against the secondary or subordinate Bus Numbers.

BXXD00F1x2B0 (NBIFEPFNCFG::PCIE_ATS_ENH_CAP_LIST)

Read-only.

ATS Extended Capability header.

Bits	Description
15:8	Reserved.
7	RELAXED_ORDERING_SUPPORTED. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates if the Function supports setting the Relaxed Ordering attribute bit in Translation Requests.
6	GLOBAL_INVALIDATE_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports Invalidation Requests that have the Global Invalidate bit set. When the bit is not set, the function ignores the Global Invalidate bit in all Invalidate Requests.
5	PAGE_ALIGNED_REQUEST. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates if the Untranslated Address is always aligned to a 4096 byte boundary.
4:0	INVALIDATE_Q_DEPTH. Read-only. A non-zero value indicates the number of Invalidate Requests that the function can accept before putting backpressure on the upstream connection, while a value of 0 indicates the function can accept 32 Invalidate Requests.

BXXD00F1x2B6 (NBIFEPFNCFG::PCIE_ATS_CNTL)

Read-write. Reset: 0000h.

ATS Control register.

Bits	Description
15:2	Reserved.
1	PRI_RESET. Read-write. Reset: 0. When Enable bit is clear, or is being cleared in the same register update that writes this bit, writes of 1 triggers a reset on the Page Request Interface, by clearing the associated implementation dependent page request credit counter and pending request state. Writes of 0 have no effect. Writes with any value while Enable bit is set have no effect. Reads always return 0.
0	PRI_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. When Stopped bit is set, controls if the Page Request Interface is allowed to issue new page requests.

BXXD00F1x2C6 (NBIFEPFNCFG::PCIE_PAGE_REQ_STATUS)

Page Request Status register.

_dev0_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x2C6;

Bits	Description
15	PRG_RESPONSE_PASID_REQUIRED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function expects a PASID TLP Prefix on PRG Response Messages when the corresponding Page Request had a PASID TLP Prefix.
14:9	Reserved.
8	STOPPED. Read-only. Reset: 1. 0=Not Detected. 1=Detected. When Enable bit is clear, indicates if the associated Page Request Interface has stopped issuing additional page requests and that all previously issued page requests have completed. This bit is cleared when Enable bit is written from 0 to 1.
7:2	Reserved.
1	UNEXPECTED_PAGE_REQ_GRP_INDEX. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates that the function has received a PRG Response Message containing a PRG index that has no matching request. This bit is cleared when Enable bit is written from 0 to 1.
0	RESPONSE_FAILURE. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates that the function has received a PRG Response Message indicating a Response Failure. This bit is cleared when Enable bit is written from 0 to 1.

BXXD00F1x2C8 (NBIFEPFNCFG::PCIE_OUTSTAND_PAGE_REQ_CAPACITY)

Read-only. Reset: 0000_0100h.

Outstanding Page Request Capacity register.

Bits	Description
15:6	Reserved.
5	SRIOV_VF_TEN_BIT_TAG_REQUESTER_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if VFs are permitted to use a 10-bit Tag field as a Requester. When disabled the VFs use the PF's setting in the Extended Tag Field Enable bit.
4	SRIOV_ARI_CAP_HIERARCHY. Read-write. Reset: 0. 0=Disable. 1=Enable. For the lowest numbered PF, controls if the device is permitted to locate VFs in Function numbers 8 to 255 of the captured bus number. This bit is not reset by FLR.
3	SRIOV_VF_MSE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if memory space decoding in VFs is enabled.
2	SRIOV_VF_MIGRATION_INTR_ENABLE. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. When VF Migration Capable bit is set, controls if the PF generates an interrupt to indicate that the VF Migration Status bit has been set.
1	SRIOV_VF_MIGRATION_ENABLE. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. When VF Migration Capable bit is set, controls if VF Migration is enabled.
0	SRIOV_VF_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if VFs are enabled.

BXXD00F1x33A (NBIFEPFNCFG::PCIE_SRIOV_STATUS)

Read-only. Reset: Fixed,0000h.

SR-IOV Status register.

_dev0_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x33A;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_func1_instNBIF1_nbio1_aliasHOST; BXXD00F1x558;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF1RC_nbio1_aliasSMN[SECONDARY_BUS]

_dev0_func1_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIO0NBIF[1:0]EPF1CFGx00000558; NBIO0NBIF[1:0]EPF1CFG=10[2:1]4_1000h

_dev0_func1_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIO1NBIF[1:0]EPF1CFGx00000558; NBIO1NBIF[1:0]EPF1CFG=10[4:3]4_1000h

Bits	Description
31:24	Reserved.
23:16	GROUP_ID. Read-write. Reset: 00h. In a multi-function implementation of SDXI, all functions connected within a group reflect the same GroupID value in this register. Software may identify all functions within a group by writing a non-zero value into the GroupID field of a function and scanning for this value in other SDXI function. Multiple physical and virtual functions may belong to the same group. A system may contain multiple groups.
15:0	DVSEC_ID. Read-only. Reset: 0010h. Indicate the DVSEC_ID associated with the SDXI DVSEC. For now, assume this is 0x0010 but this may change closer to spec finalization.

BXXD00F1x55C (NBIFEPFNCFG::DVSEC_SPACE_ID)

Read-only. Reset: 0000_0000h.

DVSEC define for the address space id.

_dev0_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x55C;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]

Bits	Description
31:23	Reserved.
22:20	DB_STRIDE . Read-only. Reset: 0h. Indicates the address stride between doorbell pages. The stride is encoded as $2^{(DBStride+12)}$.
19:17	Reserved.
16	VF . Read-only. Reset: 0. 1=Indicates a virtual function. Software should use the virtual function programming model including MMIO register layout and mailbox programming. 0=Indicates a physical function. Software should use the physical function programming model including MMIO register layout and mailbox programming.
15:0	ADDR_SPACE_ID . Read-only. Reset: 0000h. An opaque identifier that maps to the functions PCIe Requester ID. Referenced by AKey table entries. TFFuncHandle is unique for each SDXI function with a SDXI Function Group. This field may be set to 0 for implementations with DVSEC.M=0.

BXXD00F1x560 (NBIFEPFNCFG::DVSEC_CONTENT)

Read-only. Reset: 0000_0000h.

DVSEC define max buffer, db stride and so on.

_dev0_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x560;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]

Bits	Description
31:16	N_CONTEXTS . Read-only. Reset: 0000h. The contexts supported by this function range 0 to NContexts. The maximum number of contexts supported by this function is NContexts+1.
15:12	MAX_AKT_SIZE . Read-only. Reset: 0h. Indicates the maximum supported size of any A-Key table referenced by any context within this function. The size is encoded as $2^{(MaxAKTSize+12)}$ bytes.
11:6	Reserved.
5	MR . Read-only. Reset: 0. Indicate whether memory registration commands are needed.
4	M . Read-only. Reset: 0. Multiple Function Support. This bit indicates whether the function supports the use of TFFuncHandle encodings associated with other functions within the function group.
3:0	MAX_BUFFER . Read-only. Reset: 0h. Indicate the maximum data buffer size supported by this function for copy operations. The size is encoded as $2^{(MaxBuffer+21)}$. Valid MaxBuffer values range from 0 to 11. All other encodings are reserved.

BXXD00F1x564 (NBIFEPFNCFG::DVSEC_CMD_GRP0_SUPPORT)

Read-only. Reset: 0000_0000h.

DVSEC define cmd for group0 support.

_dev0_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x564;

BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]

Bits Description

31:16 **N_CONTENTTEXTS_CNTL**. Read-write. Reset: 0000h. This field controls the maximum number of contexts enabled for use by this function. The maximum number of contexts is set to NContextsCntl+1. The supported context numbers range from 0 to NContextsCntl. The value of this field is reflected in Capabilities1.NContexts in [MMIO](#) space.

15:12 **MAX_AKT_SIZE_CNTL**. Read-write. Reset: 0h. This field controls the maximum size of any A-key table useable by any context within this function. The size is encoded as $2^{(MaxAKTSize+12)}$ bytes. The maximum values of MaxAkSizeCntl is DVSEC value of MaxAKTSize. The value of this field is reflected in Capabilities1. MaxAKTSizw in [MMIO](#) spac.

11:5 Reserved.

4 **ME**. Read-write. Reset: 0. Multiple Function Enable. This bit indicates whether the function is enabled to use if TFFuncHandle encodings associated wuth other functions within the function group. The value of this field is reflected in Capabilities1.M in [MMIO](#) space. This field is reserved if the Multiple Function Support bit in DVSEC Base+0x10 is 0.

3:0 **MAX_BUFFER_CNTL**. Read-write. Reset: 0h. This filed controls the maximum data buffer size enable for use this function. This register shall be set to the value $\leq$ MaxBuffer. The encoding of the register is the same as MaxBuffer. The value of theis field is reflected in Capabilities1. MaxBuffer in [MMIO](#) space

BXXD00F1x56C (NBIFEPFNCFG::DVSEC_CMD_GRP0_EN)

Read-write. Reset: 0000_0000h.

DVSEC command for the group0 enable.

_dev0_func1_instNBIF0_nbio0_aliasHOST; BXXD00F1x56C;
 BXX=NBIFRCCFG::SUB_BUS_NUMBER_LATENCY_dev0_instNBIF0RC_nbio0_aliasSMN[SECONDARY_BUS]

Bits Description

31	VALID. Read-only. Reset: 0. 0=Values not Ready. 1=Values are Valid. Indicates if the time values reported in this capability structure are valid.
30:24	Reserved.
23:12	DLUP_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following the Downstream Port reporting Data Link Layer Active is set. Encodings are the same as for RESET_TIME.
11:0	RESET_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following a conventional reset. The lower nine bits indicate the value. The upper three bits indicate the scale used for the value, encoded as: 0 = 1 ns; 1 = 32 ns; 2 = 1024 ns; 3 = 32768 ns; 4 = 1048576 ns; 5 = 33554432 ns.

BXXD00F[1...7]x578 (NBIFEPFNCFG::RTR_DATA2)

Bits	Description
------	-------------

15:11	Reserved.
-------	-----------

10	INT_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the ability of a function to generate INTx interrupt Messages.
----	--

9	FAST_B2B_EN. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
---	---

8	SERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to signal upstream, Non-fatal and Fatal errors detected by the function, and the ability of a Port to forward upstream, Non-fatal and Fatal signals received by the Port's secondary interface.
---	---

7	AD_STEPPING. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
---	---

6	PARITY_ERROR_RESPONSE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to log errors in the Master Data Parity Error bit of the Status register.
---	---

5	PAL_SNOOP_EN. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
---	--

4	MEM_WRITE_INVALIDATE_EN. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
---	---

3	SPECIAL_CYCLE_EN. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
---	--

2	BUS_MASTER_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to issue Memory and I/O Read/Write Requests, and the ability of a Port to forward Memory and I/O Read/Write Requests in the upstream direction.
---	---

1	MEMEN_DN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to accept Memory Space accesses.
---	---

0	IOEN_DN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to accept I/O Space accesses.
---	---

BXXD07F[1...2]x006 (NBIFRCCFG::STATUS)

Used to record status information for bus related events on the primary interface.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x006; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx000000006; NBIO0NBIF1RCCFG=1020_0000h

_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]006; NBIO1NBIF0RCCFG=1030_0000h

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx000000006; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15	PARITY_ERROR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function receives a poisoned TLP on the primary interface.
14	SIGNALED_SYSTEM_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. For a function with its SERR Enable bit in the Command register set, indicates if the function signals a Non-fatal or Fatal error on the primary interface.
13	RECEIVED_MASTER_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Unsupported Request Completion Status on the primary interface.
12	RECEIVED_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Completer Abort Completion Status on the primary interface.
11	SIGNAL_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function completes a Request using Completer Abort Completion Status on the primary interface.
10:9	DEVSEL_TIMING. Read-only. Reset: Fixed,0h. Does not apply to PCI Express.
8	MASTER_DATA_PARITY_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: For a Requester with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Requester receives a poisoned Completion 2) Requester transmits a poisoned Request. For a Port with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Port receives a poisoned Completion going downstream 2) Port transmits a poisoned Request upstream.
7	FAST_BACK_CAPABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	Reserved.
5	PCI_66_CAP. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	CAP_LIST. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates the presence of a capability list item.
3	INT_STATUS. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if an INTx interrupt Message is pending internally in the function.
2:1	Reserved.
0	IMMEDIATE_READINESS. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is able to successfully complete valid configuration cycles at any time following any type of reset.

BXXD07F[1...2]x008 (NBIFRCCFG::REVISION_ID)

Read-only. Reset: 01h.

Indicates a device specific revision identifier.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x008; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

Bits	Description
31:24	SECONDARY_LATENCY_TIMER. Read-only. Reset: Fixed,00h. Does not apply to PCI Express.
23:16	SUB_BUS_NUM. Read-write. Reset: 00h. Records the bus number of the highest numbered bus segment which is behind the bridge.
15:8	SECONDARY_BUS. Read-write. Reset: 00h. Records the bus number of the bus segment to which the secondary interface of the bridge is connected.
7:0	PRIMARY_BUS. Read-write. Reset: 00h. Records the bus number of the bus segment to which the primary interface of the bridge is connected.

BXXD07F[1...2]x01C (NBIFRCCFG::IO_BASE_LIMIT)

Defines an I/O address range which is used by the bridge to determine when to forward I/O transactions from one interface to the other. For 32-bit addressing type, combines with I/O Base Upper 16 Bits and I/O Limit Upper 16 Bits registers.

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000001E; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15	PARITY_ERROR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function receives a poisoned TLP on the secondary interface.
14	RECEIVED_SYSTEM_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function receives a Non-fatal or Fatal error Message on the secondary interface.
13	RECEIVED_MASTER_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Unsupported Request Completion Status on the secondary interface.
12	RECEIVED_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Completer Abort Completion Status on the secondary interface.
11	SIGNAL_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function completes a Request using Completer Abort Completion Status on the secondary interface.
10:9	DEVSEL_TIMING. Read-only. Reset: Fixed,0h. Does not apply to PCI Express.
8	MASTER_DATA_PARITY_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: For a Port with its Parity Error Response Enable bit in the Bridge Control register set, indicates if either of the following two conditions occurs on the secondary interface: 1) Port receives a poisoned Completion coming upstream 2) Port transmits a poisoned Request downstream.
7	FAST_BACK_CAPABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	Reserved.
5	PCI_66_CAP. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4:0	Reserved.

BXXD07F[1...2]x020 (NBIFRCCFG::MEM_BASE_LIMIT)

Defines a non-prefetchable memory address range which is used by the bridge to determine when to forward memory transactions from one interface to the other.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x020; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000020; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:20	MEM_LIMIT_31_20. Read-write. Reset: 000h. Bits 31-20 for range ending non-prefetchable memory address.
19:16	MEM_LIMIT_TYPE. Read-only. Reset: Fixed,0h. Must be 0.
15:4	MEM_BASE_31_20. Read-write. Reset: 000h. Bits 31-20 for range starting non-prefetchable memory address.
3:0	MEM_BASE_TYPE. Read-only. Reset: Fixed,0h. Must be 0.

BXXD07F[1...2]x024 (NBIFRCCFG::PREF_BASE_LIMIT)

Defines a prefetchable memory address range which is used by the bridge to determine when to forward memory transactions from one interface to the other. For 64-bit addressing type, combines with Prefetchable Base Upper 32 Bits and Prefetchable Limit Upper 32 Bits registers.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x024; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx000000024; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description								
31:20	PREF_MEM_LIMIT_31_20. Read-write. Reset: 000h. Bits 31-20 for range ending prefetchable memory address.								
19:16	PREF_MEM_LIMIT_TYPE. Read-only. Reset: Fixed,1h. Prefetchable Memory Limit Addressing Type. ValidValues:								
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>32-bit</td></tr> <tr> <td>1h</td><td>64-bit</td></tr> <tr> <td>Fh-2h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	32-bit	1h	64-bit	Fh-2h	Reserved.
Value	Description								
0h	32-bit								
1h	64-bit								
Fh-2h	Reserved.								
15:4	PREF_MEM_BASE_31_20. Read-write. Reset: 000h. Bits 31-20 for range starting prefetchable memory address.								
3:0	PREF_MEM_BASE_TYPE. Read-only. Reset: Fixed,1h. Prefetchable Memory Base Addressing Type. ValidValues:								
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>32-bit</td></tr> <tr> <td>1h</td><td>64-bit</td></tr> <tr> <td>Fh-2h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	32-bit	1h	64-bit	Fh-2h	Reserved.
Value	Description								
0h	32-bit								
1h	64-bit								
Fh-2h	Reserved.								

BXXD07F[1...2]x028 (NBIFRCCFG::PREF_BASE_UPPER)

Read-write. Reset: 0000_0000h.

For 64-bit addressing type, combines with Prefetchable Memory Base register to define a prefetchable memory address range starting which is used by the bridge to determine when to forward memory transactions from one interface to the other.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x028; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx000000028; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:0	PREF_BASE_UPPER. Read-write. Reset: 0000_0000h. Upper 32 bits for range starting 64-bit prefetchable memory address.

BXXD07F[1...2]x02C (NBIFRCCFG::PREF_LIMIT_UPPER)

Read-write. Reset: 0000_0000h.

For 64-bit addressing type, combines with Prefetchable Memory Limit register to define a prefetchable memory address range ending which is used by the bridge to determine when to forward memory transactions from one interface to the other.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x02C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

BXXD07F[1...2]x03E (NBIFRCCFG::BRIDGE_CNTL)

Provides control over a port's ability to forward bus cycles between its primary and secondary interfaces.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x03E; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x03E; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x03E; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]03E; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000003E; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]03E; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000003E; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
15:12	Reserved.
11	DISCARD_TIMER_SERR_ENABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
10	DISCARD_TIMER_STATUS. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
9	SECONDARY_DISCARD_TIMER. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
8	PRIMARY_DISCARD_TIMER. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
7	FAST_B2B_EN. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	SECONDARY_BUS_RESET. Read-write. Reset: 0. 0=Normal Operation. 1=Reset. Triggers a hot reset on the corresponding Port.
5	MASTER_ABORT_MODE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	VGA_DEC. Read-write. Reset: 0. 0=Disable. 1=Enable. For a Port with VGA Enable set, enables the bridge to provide 16-bit decoding of VGA I/O addresses, rather than 10-bit decoding.
3	VGA_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the bridge's ability to forward VGA compatible addresses from primary interface to secondary interface.
2	ISA_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Disables the bridge from forwarding I/O addresses, in the top 768 bytes of each 1 kB block in the I/O address range, from primary interface to secondary interface.
1	SERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the forwarding of ERR_CORR, ERR_NONFATAL and ERR_FATAL from secondary interface to primary interface.
0	PARITY_RESPONSE_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to log errors in the Master Data Parity Error bit of the Secondary Status register.

BXXD07F[1...2]x040 (NBIFRCCFG::EXT_BRIDGE_CNTL)

Read-write. Reset: 00h.

External Bridge Control register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x040; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x040; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x040; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]040; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000040; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]040; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000040; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
7:1	Reserved.
0	IO_PORT_80_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls IO port 80 decoding.

BXXD07F[1...2]x050 (NBIFRCCFG::PMI_CAP_LIST)

Read-only. Reset: Fixed,5801h.

Power Management Capability header.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x050; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

Bits	Description																		
15:11	PME_SUPPORT. Read-only. Reset: 19h. Indicates the power states from which the function may generate a PME. This field is a bit vector that covers all Dx states. Bit 0 corresponds to D0.																		
10	D2_SUPPORT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates support for the D2 power state.																		
9	D1_SUPPORT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates support for the D1 power state.																		
8:6	AUX_CURRENT. Read-write. Reset: 0h. Indicates the amount of 3.3Vaux current required to support PME from D3cold.																		
Valid Values:																			
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>0 mA</td></tr> <tr> <td>1h</td><td>55 mA</td></tr> <tr> <td>2h</td><td>100 mA</td></tr> <tr> <td>3h</td><td>160 mA</td></tr> <tr> <td>4h</td><td>220 mA</td></tr> <tr> <td>5h</td><td>270 mA</td></tr> <tr> <td>6h</td><td>320 mA</td></tr> <tr> <td>7h</td><td>375 mA</td></tr> </table>	Value	Description	0h	0 mA	1h	55 mA	2h	100 mA	3h	160 mA	4h	220 mA	5h	270 mA	6h	320 mA	7h	375 mA
Value	Description																		
0h	0 mA																		
1h	55 mA																		
2h	100 mA																		
3h	160 mA																		
4h	220 mA																		
5h	270 mA																		
6h	320 mA																		
7h	375 mA																		
5	DEV_SPECIFIC_INIT. Read-only. Reset: 0. 0=Not Required. 1=Required. Indicates if the function requires a Device Specific Initialization sequence, upon transition to D0.																		
4	IMMEDIATE_READINESS_ON_RETURN_TO_D0. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is able to successfully complete valid configuration cycles at any time following return to D0.																		
3	PME_CLOCK. Read-only. Reset: Fixed,0. Does not apply to PCI Express.																		
2:0	VERSION. Read-only. Reset: Fixed,3h. Indicates PCI-SIG defined capability structure version number.																		

BXXD07F[1...2]x054 (NBIFRCCFG::PMI_STATUS_CNTL)

Power Management Status/Control register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x054; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x054; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x054; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]054; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000054; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]054; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000054; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description										
31:24	PMI_DATA. Read-only. Reset: Fixed,00h. Data.										
23	BUS_PWR_EN. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if Secondary Bus Clock Control is supported.										
22	B2_B3_SUPPORT. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if Secondary Bus Power Control is supported.										
21:16	Reserved.										
15	PME_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a PME is pending internally in the function. When auxiliary power is consumed, this field is sticky.										
14:13	DATA_SCALE. Read-only. Reset: Fixed,0h. Data Scale.										
12:9	DATA_SELECT. Read-only. Reset: Fixed,0h. Data Select.										
8	PME_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls a function's ability to generate a PME. When auxiliary power is consumed, this field is sticky.										
7:4	Reserved.										
3	NO_SOFT_RESET. Read-only. Reset: 0. 0=Reset on D3hot to D0. 1=No Reset on D3hot to D0. Indicates if the function does not reset on a transition from D3hot to D0.										
2	Reserved.										
1:0	POWER_STATE. Read-write. Reset: 0h. Writes set the function to the written power state. Reads return the function's current power state.										
	ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>D0</td></tr> <tr> <td>1h</td><td>D1</td></tr> <tr> <td>2h</td><td>D2</td></tr> <tr> <td>3h</td><td>D3</td></tr> </table>	Value	Description	0h	D0	1h	D1	2h	D2	3h	D3

BXXD07F[1...2]x058 (NBIFRCCFG::PCIE_CAP_LIST)

Read-only.

PCI Express Capability header.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x058; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x058; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x058; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]058; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000058; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]058; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000058; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
15:8	NEXT_PTR. Read-only. Reset: A0h. Pointer to the next item in the capabilities list, or 00h if no other items exist.
7:0	CAP_ID. Read-only. Reset: Fixed,10h. A PCI-SIG defined ID number that indicates the nature and format of the capability.

BXXD07F[1...2]x05A (NBIFRCCFG::PCIE_CAP)

Read-only.

The PCI Express Capabilities register identifies PCI Express device type and associated capabilities.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x05A; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x05A; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x05A; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]05A; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000005A; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]05A; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000005A; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description																								
15:14	Reserved.																								
13:9	INT_MESSAGE_NUM. Read-only. Reset: Fixed,00h. Indicates the MSI/MSI-X vector used for interrupts generated in association with any of the status bits in the PCI Express capability structure.																								
8	SLOT_IMPLEMENTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Link associated with this Port is connected to a slot. For Upstream Ports, this bit is undefined.																								
7:4	DEVICE_TYPE. Read-only. Reset: 4h. Indicates the type of PCI Express device. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>PCI Express Endpoint</td></tr> <tr> <td>1h</td><td>Legacy PCI Express Endpoint</td></tr> <tr> <td>3h-2h</td><td>Reserved.</td></tr> <tr> <td>4h</td><td>Root Port of PCI Express Root Complex</td></tr> <tr> <td>5h</td><td>Upstream Port of PCI Express Switch</td></tr> <tr> <td>6h</td><td>Downstream Port of PCI Express Switch</td></tr> <tr> <td>7h</td><td>PCI Express to PCI/PCI-X Bridge</td></tr> <tr> <td>8h</td><td>PCI/PCI-X to PCI Express Bridge</td></tr> <tr> <td>9h</td><td>Root Complex Integrated Endpoint</td></tr> <tr> <td>Ah</td><td>Root Complex Event Collector</td></tr> <tr> <td>Fh-Bh</td><td>Reserved.</td></tr> </table>	Value	Description	0h	PCI Express Endpoint	1h	Legacy PCI Express Endpoint	3h-2h	Reserved.	4h	Root Port of PCI Express Root Complex	5h	Upstream Port of PCI Express Switch	6h	Downstream Port of PCI Express Switch	7h	PCI Express to PCI/PCI-X Bridge	8h	PCI/PCI-X to PCI Express Bridge	9h	Root Complex Integrated Endpoint	Ah	Root Complex Event Collector	Fh-Bh	Reserved.
Value	Description																								
0h	PCI Express Endpoint																								
1h	Legacy PCI Express Endpoint																								
3h-2h	Reserved.																								
4h	Root Port of PCI Express Root Complex																								
5h	Upstream Port of PCI Express Switch																								
6h	Downstream Port of PCI Express Switch																								
7h	PCI Express to PCI/PCI-X Bridge																								
8h	PCI/PCI-X to PCI Express Bridge																								
9h	Root Complex Integrated Endpoint																								
Ah	Root Complex Event Collector																								
Fh-Bh	Reserved.																								
3:0	VERSION. Read-only. Reset: 2h. Indicates PCI-SIG defined capability structure version number.																								

BXXD07F[1...2]x05C (NBIFRCCFG::DEVICE_CAP)

Read-only.

The Device Capabilities register identifies device specific capabilities.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x05C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x05C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x05C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]05C; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000005C; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]05C; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000005C; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description																		
31:29	Reserved.																		
28	FLR_CAPABLE. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Endpoints only) Indicates if the function supports Function Level Resets. For non-Endpoints this field is Reserved.																		
27:26	CAPTURED_SLOT_POWER_SCALE. Read-only. Reset: Fixed,0h. (Upstream Ports only) Indicates the scale used for the Slot Power Limit Value. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1.0x</td></tr> <tr> <td>1h</td><td>0.1x</td></tr> <tr> <td>2h</td><td>0.01x</td></tr> <tr> <td>3h</td><td>0.001x</td></tr> </table>	Value	Description	0h	1.0x	1h	0.1x	2h	0.01x	3h	0.001x								
Value	Description																		
0h	1.0x																		
1h	0.1x																		
2h	0.01x																		
3h	0.001x																		
25:18	CAPTURED_SLOT_POWER_LIMIT. Read-only. Reset: Fixed,00h. (Upstream Ports only) In combination with the Slot Power Limit Scale value, indicates the upper limit on power supplied by slot.																		
17	Reserved.																		
16	ERR_COR_SUBCLASS_CAPABLE. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the ERR_COR Subclass field in ERR_COR messages.																		
15	ROLE_BASED_ERR_REPORTING. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates the function implements Role-Based Error Reporting functionality.																		
14:12	Reserved.																		
11:9	L1_ACCEPTABLE_LATENCY. Read-only. Reset: Fixed,0h. Description: (Endpoints only) Indicates the maximum acceptable latency that an Endpoint can withstand due to the transition from L1 state to L0 state. For non-Endpoints this field is Reserved. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1 us</td></tr> <tr> <td>1h</td><td>2 us</td></tr> <tr> <td>2h</td><td>4 us</td></tr> <tr> <td>3h</td><td>8 us</td></tr> <tr> <td>4h</td><td>16 us</td></tr> <tr> <td>5h</td><td>32 us</td></tr> <tr> <td>6h</td><td>64 us</td></tr> <tr> <td>7h</td><td>No Limit</td></tr> </table>	Value	Description	0h	1 us	1h	2 us	2h	4 us	3h	8 us	4h	16 us	5h	32 us	6h	64 us	7h	No Limit
Value	Description																		
0h	1 us																		
1h	2 us																		
2h	4 us																		
3h	8 us																		
4h	16 us																		
5h	32 us																		
6h	64 us																		
7h	No Limit																		
8:6	L0S_ACCEPTABLE_LATENCY. Read-only. Reset: Fixed,0h. Description: (Endpoints only) Indicates the maximum acceptable total latency that Endpoint can withstand due to the transition from L0s state to L0 state. For non-Endpoints this field is Reserved.																		

	ValidValues:	
	Value	Description
	0h	64 ns
	1h	128 ns
	2h	256 ns
	3h	512 ns
	4h	1 us
	5h	2 us
	6h	4 us
	7h	No Limit
5	EXTENDED_TAG . Read-only. Reset: Fixed,1. 0=5 Bit Tag Supported. 1=8 Bit Tag Supported. When 10-Bit Tag Requester Supported bit is clear, indicates the maximum supported size of the Tag field as a Requester.	
4:3	PHANTOM_FUNC . Read-only. Reset: Fixed,0h. Indicates the support for use of unclaimed function numbers to extend the number of outstanding transactions allowed by logically combining unclaimed function numbers with the Tag identifier.	
	ValidValues:	
	Value	Description
	0h	No Phantom Functions
	1h	1 Phantom Function
	2h	3 Phantom Functions
	3h	7 Phantom Functions
2:0	MAX_PAYLOAD_SUPPORT . Read-only. Reset: 2h. Indicates the maximum payload size that the function can support for TLPs.	
	ValidValues:	
	Value	Description
	0h	128 Bytes
	1h	256 Bytes
	2h	512 Bytes
	3h	1024 Bytes
	4h	2048 Bytes
	5h	4096 Bytes
	7h-6h	Reserved.

Bits	Description																
15	BRIDGE_CFG_RETRY_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Description: (Bridges only) Controls if a PCI Express to PCI/PCI-X Bridge is permitted to return Configuration Retry Status. For non-Bridges and non-Endpoints this bit is Reserved.																
14:12	MAX_READ_REQUEST_SIZE. Read-write. Reset: 2h. Controls the maximum Read Request size for the function as a Requester. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>128 Bytes</td></tr> <tr> <td>1h</td><td>256 Bytes</td></tr> <tr> <td>2h</td><td>512 Bytes</td></tr> <tr> <td>3h</td><td>1024 Bytes</td></tr> <tr> <td>4h</td><td>2048 Bytes</td></tr> <tr> <td>5h</td><td>4096 Bytes</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	128 Bytes	1h	256 Bytes	2h	512 Bytes	3h	1024 Bytes	4h	2048 Bytes	5h	4096 Bytes	7h-6h	Reserved.
Value	Description																
0h	128 Bytes																
1h	256 Bytes																
2h	512 Bytes																
3h	1024 Bytes																
4h	2048 Bytes																
5h	4096 Bytes																
7h-6h	Reserved.																
11	NO_SNOOP_EN. Read-write. Reset: 1. 0=Disable. 1=Enable. Controls if the function is permitted to set the No Snoop bit in the Requester Attributes of transactions it initiates that do not require hardware enforced cache coherency.																
10	AUX_POWER_PM_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if a function is permitted to draw AUX power independent of PME AUX power.																
9	PHANTOM_FUNC_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use unclaimed function numbers as Phantom Functions to extend the number of outstanding transaction identifiers.																
8	EXTENDED_TAG_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use an 8-bit Tag field as a Requester. When both bits are disabled the function is restricted to use a 5-bit Tag field.																
7:5	MAX_PAYLOAD_SIZE. Read-write. Reset: 0h. Controls the maximum TLP payload size for the function. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>128 Bytes</td></tr> <tr> <td>1h</td><td>256 Bytes</td></tr> <tr> <td>2h</td><td>512 Bytes</td></tr> <tr> <td>3h</td><td>1024 Bytes</td></tr> <tr> <td>4h</td><td>2048 Bytes</td></tr> <tr> <td>5h</td><td>4096 Bytes</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	128 Bytes	1h	256 Bytes	2h	512 Bytes	3h	1024 Bytes	4h	2048 Bytes	5h	4096 Bytes	7h-6h	Reserved.
Value	Description																
0h	128 Bytes																
1h	256 Bytes																
2h	512 Bytes																
3h	1024 Bytes																
4h	2048 Bytes																
5h	4096 Bytes																
7h-6h	Reserved.																
4	RELAXED_ORD_EN. Read-write. Reset: 1. 0=Disable. 1=Enable. Controls if the function is permitted to set the Relaxed Ordering bit in the Attributes field of transactions it initiates that do not require strong write ordering.																
3	USR_REPORT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Unsupported Requests.																
2	FATAL_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Fatal errors.																
1	NON_FATAL_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of Non-fatal errors.																

0	CORR_ERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls signaling of correctable errors.

Bits	Description
15:7	Reserved.
6	EMER_POWER_REDUCTION_DETECTED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Description: (Upstream Ports only) When Emergency Power Reduction Supported field is 1 or 2, indicates if the function has entered the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.
5	TRANSACTIONS_PEND. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function has issued Non-Posted Requests, on its own behalf, which have not been completed.
4	AUX_PWR. Read-write. Reset: 0. 0=Not Detected. 1=Detected. Functions that require AUX power report this bit as set if AUX power is detected by the function.
3	USR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function received an Unsupported Request.
2	FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Fatal errors detected.
1	NON_FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Non-fatal errors detected.
0	CORR_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of correctable errors detected.

BXXD07F[1...2]x064 (NBIFRCCFG::LINK_CAP)

Read-only.

The Link Capabilities register identifies Link specific capabilities.

Bits	Description																		
31:24	PORT_NUMBER. Read-only. Reset: 00h. Indicates the Port number for the Link.																		
23	Reserved.																		
22	ASPM_OPTIONALITY_COMPLIANCE. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports the ASPM Optionality functionality.																		
21	LINK_BW_NOTIFICATION_CAP. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the Link Bandwidth Notification status and interrupt mechanisms. For Upstream Ports, this bit is Reserved.																		
20	DL_ACTIVE_REPORTING_CAPABLE. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the reporting of DL_Active state of the Data Link Control and Management State Machine. For Upstream Ports, this bit is Reserved.																		
19	SURPRISE_DOWN_ERR_REPORTING. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the detecting and reporting of a Surprise Down error condition. For Upstream Ports, this bit is Reserved.																		
18	CLOCK_POWER_MANAGEMENT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Upstream Ports only) Indicates if the Port tolerates removal of REFCLK via the CLKREQ# mechanism when the Link is in L1 or L2/L3 Ready. For Downstream Ports, this bit is Reserved.																		
17:15	L1_EXIT_LATENCY. Read-only. Reset: 0h. Indicates the L1 exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L1 to L0. ValidValues:																		
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>up to 999 ns</td></tr> <tr> <td>1h</td><td>1 to 1.9 us</td></tr> <tr> <td>2h</td><td>2 to 3.9 us</td></tr> <tr> <td>3h</td><td>4 to 7.9 us</td></tr> <tr> <td>4h</td><td>8 to 15.9 us</td></tr> <tr> <td>5h</td><td>16 to 31.9 us</td></tr> <tr> <td>6h</td><td>32 to 64 us</td></tr> <tr> <td>7h</td><td>more than 64 us</td></tr> </table>	Value	Description	0h	up to 999 ns	1h	1 to 1.9 us	2h	2 to 3.9 us	3h	4 to 7.9 us	4h	8 to 15.9 us	5h	16 to 31.9 us	6h	32 to 64 us	7h	more than 64 us
Value	Description																		
0h	up to 999 ns																		
1h	1 to 1.9 us																		
2h	2 to 3.9 us																		
3h	4 to 7.9 us																		
4h	8 to 15.9 us																		
5h	16 to 31.9 us																		
6h	32 to 64 us																		
7h	more than 64 us																		
14:12	L0S_EXIT_LATENCY. Read-only. Reset: 0h. Indicates the L0s exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L0s to L0.																		

	ValidValues:	
	Value	Description
	0h	up to 63 ns
	1h	64 to 127 ns
	2h	128 to 255 ns
	3h	256 to 511 ns
	4h	512 to 999 ns
	5h	1 to 1.9 us
	6h	2 to 4 us
	7h	more than 4 us
11:10	PM_SUPPORT. Read-only. Reset: 3h. Indicates the level of ASPM supported on the Link.	
	ValidValues:	
	Value	Description
	0h	No ASPM Supported
	1h	L0s Supported
	2h	L1 Supported
	3h	L0s and L1 Supported
9:4	LINK_WIDTH. Read-only. Reset: 10h. Indicates the maximum width of the Link.	
	ValidValues:	
	Value	Description
	00h	Reserved.
	01h	x1
	02h	x2
	03h	Reserved.
	04h	x4
	07h-05h	Reserved.
	08h	x8
	0Bh-09h	Reserved.
	0Ch	x12
	0Fh-0Dh	Reserved.
	10h	x16
	1Fh-11h	Reserved.
	20h	x32
	3Fh-21h	Reserved.
3:0	LINK_SPEED. Read-only. Reset: 5h. Indicates the maximum speed of the Link.	
	ValidValues:	
	Value	Description
	0h	Reserved.
	1h	2.5 GT/s
	2h	5.0 GT/s
	3h	8.0 GT/s
	4h	16.0 GT/s
	5h	32.0 GT/s
	Fh-6h	Reserved.

Bits	Description										
15:14	DRS_SIGNALING_CONTROL. Read-write. Reset: Fixed,0h. (Downstream Ports only) When DRS Supported bit is set, controls the mechanism used to report reception of a DRS Message. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>DRS not Reported</td></tr> <tr> <td>1h</td><td>DRS Interrupt Enabled</td></tr> <tr> <td>2h</td><td>DRS to FRS Signaling Enabled</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	DRS not Reported	1h	DRS Interrupt Enabled	2h	DRS to FRS Signaling Enabled	3h	Reserved.
Value	Description										
0h	DRS not Reported										
1h	DRS Interrupt Enabled										
2h	DRS to FRS Signaling Enabled										
3h	Reserved.										
13:12	Reserved.										
11	LINK_AUTONOMOUS_BW_INT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports only) Controls if the function generates an interrupt to indicate that the Link Autonomous Bandwidth Status bit has been set.										
10	LINK_BW_MANAGEMENT_INT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports only) Controls if the function generates an interrupt to indicate that the Link Bandwidth Management Status bit has been set.										
9	HW_AUTONOMOUS_WIDTH_DISABLE. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the Port's ability to autonomously direct changes in link width.										
8	CLOCK_POWER_MANAGEMENT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Upstream Ports only) Controls if the function is permitted to use CLKREQ# signal to power manage the Link clock. For Downstream Ports, this bit is Reserved.										
7	EXTENDED_SYNC. Read-write. Reset: 0. 0=Disable. 1=Enable. Forces the transmission of additional ordered sets, exiting the L0s or Recovery states.										
6	COMMON_CLOCK_CFG. Read-write. Reset: 0. 0=Same REFCLK not Used. 1=Same REFCLK Used. Indicates if this component and the component at the opposite end of this Link are operating with a distributed common reference clock.										
5	RETRAIN_LINK. Write-only. Reset: 0. 0=Normal Operation. 1=Retrain Link. (Downstream Ports only) A write of 1 to this bit initiates Link retraining by directing the Physical Layer LTSSM to the Recovery state. Reads of this bit always return 0b.										
4	LINK_DIS. Read-write. Reset: 0. 0=Normal Operation. 1=Disable Link. Description: (Downstream Ports only) Disables the Link when set to 1, by directing the Physical Layer LTSSM to the Disabled state. For Upstream Ports, this bit is Reserved.										
3	READ_CPL_BOUNDARY. Read-write. Reset: Fixed,0. 0=64 Byte. 1=128 Byte. Description: Indicates the RCB value for the Root Port sourcing the topology associated with the Link. For Switches, this bit is Reserved.										
2	PTM_PROP_DELAY_ADAPT_INTER_B. Read-write. Reset: Fixed,0. 0=Interpretation A. 1=Interpretation B. Description: Controls the interpretation of the Propagation Delay[31:0] field of the PTM Message. For devices that don't support PTM, this bit is Reserved.										
1:0	PM_CONTROL. Read-write. Reset: 0h. Controls the level of ASPM enabled on the Link.										

	ValidValues:	
	Value	Description
	0h	Disabled
	1h	Tx_L0s Entry Enabled
	2h	L1 Entry Enabled
	3h	Tx_L0s and L1 Entry Enabled

Bits	Description																														
15	LINK_AUTONOMOUS_BW_STATUS. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates that hardware has autonomously changed the Link's speed or width, without the Port transitioning through DL_Down status, for reasons other than to attempt to correct unreliable Link operation.																														
14	LINK_BW_MANAGEMENT_STATUS. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Description: Indicates that either of the following has occurred without the Port transitioning through DL_Down status: A Link retraining has completed following a write of 1 to the Retrain Link bit. Hardware has changed the Link's speed or width to attempt to correct unreliable Link operation, either through an LTSSM timeout or a higher level process.																														
13	DL_ACTIVE. Read-only. Reset: 1. 0=Not DL_Active state. 1=DL_Active state. If Data Link Layer Link Active Capability is supported and when the optionally supported SFI DLL State Mask bit is clear, indicates the status of the Data Link Control and Management State Machine.																														
12	SLOT_CLOCK_CFG. Read-only. Reset: Fixed,1. 0=Same REFCLK not Required. 1=Same REFCLK Required. Indicates if the component uses the same physical reference clock that the platform provides on the connector.																														
11	LINK_TRAINING. Read-only. Reset: 0. 0=Normal. 1=Link Training in Progress. Description: (Downstream Ports only) Indicates that Link training is in progress (Physical Layer LTSSM in Configuration or Recovery state) or that 1 was written to the Retrain Link bit but Link training has not yet begun. Hardware clears this bit once Link training is complete. For Upstream Ports, this bit is Reserved.																														
10	Reserved.																														
9:4	NEGOTIATED_LINK_WIDTH. Read-only. Reset: 10h. Indicates the negotiated width of the Link. ValidValues:																														
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>00h</td><td>Reserved.</td></tr> <tr> <td>01h</td><td>x1</td></tr> <tr> <td>02h</td><td>x2</td></tr> <tr> <td>03h</td><td>Reserved.</td></tr> <tr> <td>04h</td><td>x4</td></tr> <tr> <td>07h-05h</td><td>Reserved.</td></tr> <tr> <td>08h</td><td>x8</td></tr> <tr> <td>0Bh-09h</td><td>Reserved.</td></tr> <tr> <td>0Ch</td><td>x12</td></tr> <tr> <td>0Fh-0Dh</td><td>Reserved.</td></tr> <tr> <td>10h</td><td>x16</td></tr> <tr> <td>1Fh-11h</td><td>Reserved.</td></tr> <tr> <td>20h</td><td>x32</td></tr> <tr> <td>3Fh-21h</td><td>Reserved.</td></tr> </table>	Value	Description	00h	Reserved.	01h	x1	02h	x2	03h	Reserved.	04h	x4	07h-05h	Reserved.	08h	x8	0Bh-09h	Reserved.	0Ch	x12	0Fh-0Dh	Reserved.	10h	x16	1Fh-11h	Reserved.	20h	x32	3Fh-21h	Reserved.

Bits	Description										
31:19	PHYSICAL_SLOT_NUM. Read-write. Reset: Fixed,0000h. Indicates the physical slot number attached to this Port.										
18	NO_COMMAND_COMPLETED_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this slot does not generate software notification when an issued command is completed by the Hot-Plug Controller.										
17	ELECTROMECH_INTERLOCK_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an Electromechanical Interlock is implemented for this slot.										
16:15	SLOT_PWR_LIMIT_SCALE. Read-write. Indicates the scale used for the Slot Power Limit Value.										
ValidValues:											
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1.0x</td></tr> <tr> <td>1h</td><td>0.1x</td></tr> <tr> <td>2h</td><td>0.01x</td></tr> <tr> <td>3h</td><td>0.001x</td></tr> </table>	Value	Description	0h	1.0x	1h	0.1x	2h	0.01x	3h	0.001x
Value	Description										
0h	1.0x										
1h	0.1x										
2h	0.01x										
3h	0.001x										
14:7	SLOT_PWR_LIMIT_VALUE. Read-write. In combination with the Slot Power Limit Scale value, indicates the upper limit on power supplied by this slot.										
6	HOTPLUG_CAPABLE. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if this slot is capable of supporting Hot-Plug operations.										
5	HOTPLUG_SURPRISE. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an adapter present in this slot might be removed from the system without any prior notification.										
4	PWR_INDICATOR_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a Power Indicator is implemented for this slot.										
3	ATTN_INDICATOR_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an Attention Indicator is implemented for this slot.										
2	MRL_SENSOR_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a Manually-operated Retention Latch Sensor is implemented for this slot.										
1	PWR_CONTROLLER_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a Power Controller is implemented for this slot.										
0	ATTN_BUTTON_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an Attention Button is implemented for this slot.										

BXXD07F[1...2]x070 (NBIFRCCFG::SLOT_CNTL)

Read-write.

The Slot Control register controls slot specific parameters.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x070; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x070; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x070; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]070; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000070; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]070; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000070; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description										
15	Reserved.										
14	INBAND_PD_DISABLE . Read-write. Reset: Fixed,0. 0=Enable. 1=Disable. If In-band Presence Detect Disable Capability is supported, controls the Port's ability to use in-band presence to determine Presence Detect State and Component Presence.										
13	AUTO_SLOT_PWR_LIMIT_DISABLE . Read-write. Reset: Fixed,0. 0=Enable. 1=Disable. (Downstream Ports only) Controls the Port's ability of automatically sending a Set Slot Power Limit Message when a Link transitions from non-DL_Up to DL_Up status.										
12	DL_STATE_CHANGED_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. If Data Link Layer Link Active Capability is supported, controls if the function generates software notification when Data Link Layer Link Active Reporting bit is changed.										
11	ELECTROMECH_INTERLOCK_CNTL . Read-write. Reset: Fixed,0. If Electromechanical Interlock is supported, writes of 1 causes the state of the Electromechanical Interlock to toggle. Writes of 0 have no effect. Reads always return 0.										
10	PWR_CONTROLLER_CNTL . Read-write. Reset: Fixed,0. 0=Power On. 1=Power Off. If Power Controller is supported, writes set the power state of the slot to the written state. Read returns the last written value.										
9:8	PWR_INDICATOR_CNTL . Read-write. Reset: Fixed,0h. If Power Indicator is supported, writes set the Power Indicator to the written state. Reads return the last written value.										
	ValidValues:										
	<table><tr><th>Value</th><th>Description</th></tr><tr><td>0h</td><td>Reserved.</td></tr><tr><td>1h</td><td>On</td></tr><tr><td>2h</td><td>Blink</td></tr><tr><td>3h</td><td>Off</td></tr></table>	Value	Description	0h	Reserved.	1h	On	2h	Blink	3h	Off
	Value	Description									
	0h	Reserved.									
	1h	On									
2h	Blink										
3h	Off										
7:6	ATTN_INDICATOR_CNTL . Read-write. Reset: Fixed,0h. If Attention Indicator is supported, writes set the Attention Indicator to the written state. Reads return the last written value.										
	ValidValues:										
	<table><tr><th>Value</th><th>Description</th></tr><tr><td>0h</td><td>Reserved.</td></tr><tr><td>1h</td><td>On</td></tr><tr><td>2h</td><td>Blink</td></tr><tr><td>3h</td><td>Off</td></tr></table>	Value	Description	0h	Reserved.	1h	On	2h	Blink	3h	Off
	Value	Description									
	0h	Reserved.									
	1h	On									
2h	Blink										
3h	Off										
5	HOTPLUG_INTR_EN . Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Hot-Plug Capability is supported, controls if the function generates an interrupt on enabled Hot-Plug events.										
4	COMMAND_COMPLETED_INTR_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. If Command Completed notification is supported, controls if the function generates software notification when a command is completed by the Hot-Plug Controller.										
3	PRESENCE_DETECT_CHANGED_EN . Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Hot-Plug Capability is supported, controls if the function generates software notification on a presence detect changed event.										

2	MRL_SENSOR_CHANGED_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If MRL Sensor is supported, controls if the function generates software notification on a MRL sensor changed event.
1	PWR_FAULT_DETECTED_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Power Fault Detection is supported, controls if the function generates software notification on a power fault event.
0	ATTN_BUTTON_PRESSED_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Attention Button is supported, controls if the function generates software notification on an attention button pressed event.

BXXD07F[1...2]x072 (NBIFRCCFG::SLOT_STATUS)

The Slot Status register provides information about slot specific parameters.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x072; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000072; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15:9	Reserved.
8	DL_STATE_CHANGED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. If Data Link Layer Link Active Capability is supported, indicates if the value reported in the Data Link Layer Link Active bit of the Link Status register is changed.
7	ELECTROMECH_INTERLOCK_STATUS. Read-write. Reset: Fixed,0. 0=Electromechanical Interlock Disengaged. 1=Electromechanical Interlock Engaged. If Electromechanical Interlock is supported, indicates the status of the Electromechanical Interlock.
6	PRESENCE_DETECT_STATE. Read-write. Reset: Fixed,1. 0=Adapter not Present. 1=Adapter Present. When the optionally supported SFI PD State Mask bit is clear, indicates the presence of an adapter in the slot, based on all enabled presence detect mechanisms.
5	MRL_SENSOR_STATE. Read-write. Reset: Fixed,0. 0=MRL Closed. 1=MRL Open. If MRL Sensor is supported, indicates the status of the MRL sensor.
4	COMMAND_COMPLETED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. If Command Completed notification is supported, indicates if the Hot-Plug Controller completes an issued command.
3	PRESENCE_DETECT_CHANGED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If Hot-Plug Capability is supported, indicates if the value reported in the Presence Detect State bit is changed.
2	MRL_SENSOR_CHANGED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If MRL Sensor is supported, indicates if a MRL sensor state change is detected.
1	PWR_FAULT_DETECTED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If Power Fault Detection is supported, indicates if the power controller detected a power fault at this slot.
0	ATTN_BUTTON_PRESSED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If Attention Button is supported, indicates if the attention button is pressed.

BXXD07F[1...2]x074 (NBIFRCCFG::ROOT_CNTL)

Read-write. Reset: 0000h.

The Root Control register controls Root Complex specific parameters.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x074; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x074; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x074; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]074; NBIO0NBIF0RCCFG=1010_0000h_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000074; NBIO0NBIF1RCCFG=1020_0000h_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]074; NBIO1NBIF0RCCFG=1030_0000h_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000074; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15:5	Reserved.
4	CRS_SOFTWARE_VISIBILITY_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Root Port returns Configuration Request Retry Status Completion Status to software.
3	PM_INTERRUPT_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls interrupt generation upon receipt of a PME Message.
2	SERR_ON_FATAL_ERR_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a System Error should be generated if a Fatal error is reported by any of the devices in the hierarchy associated with this Root Port.
1	SERR_ON_NONFATAL_ERR_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a System Error should be generated if a Non-fatal error is reported by any of the devices in the hierarchy associated with this Root Port.
0	SERR_ON_CORR_ERR_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a System Error should be generated if a correctable error is reported by any of the devices in the hierarchy associated with this Root Port.

BXXD07F[1...2]x076 (NBIFRCCFG::ROOT_CAP)

Read-write. Reset: Fixed,0001h.

The Root Capabilities register identifies Root Port specific capabilities.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x076; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x076; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x076; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]076; NBIO0NBIF0RCCFG=1010_0000h_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000076; NBIO0NBIF1RCCFG=1020_0000h_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]076; NBIO1NBIF0RCCFG=1030_0000h_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000076; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15:1	Reserved.
0	CRS_SOFTWARE_VISIBILITY . Read-write. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Root Port is capable of returning Configuration Request Retry Status Completion Status to software.

BXXD07F[1...2]x078 (NBIFRCCFG::ROOT_STATUS)

Reset: 0000_0000h.

The Root Status register provides information about device specific parameters.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x078; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x078; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x078; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]078; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000078; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]078; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000078; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:18	Reserved.
17	PME_PENDING. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if another PME is pending when the PME Status bit is set. Hardware clears this bit when no more PMEs are pending.
16	PME_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if PME was asserted by the PME Requester indicated in the PME Requester ID field.
15:0	PME_REQUESTOR_ID. Read-only. Reset: 0000h. When PME Status is set, indicates the Requester ID of the PME Requester.

BXXD07F[1...2]x07C (NBIFRCCFG::DEVICE_CAP2)

Read-only.

The Device Capabilities 2 register identifies device specific capabilities.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x07C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x07C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x07C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]07C; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000007C; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]07C; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000007C; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description										
31	FRS_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function supports Function Readiness Status capability.										
30:27	Reserved.										
26	EMER_POWER_REDUCTION_INIT_REQ. Read-only. Reset: Fixed,0. 0=Initialization not Required. 1=Initialization Required. Description: (Upstream Ports only) Indicates if the function requires software initialization upon exiting the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.										
25:24	EMER_POWER_REDUCTION_SUPPORTED. Read-only. Reset: Fixed,0h. Description: (Upstream Ports only) Indicates if the function supports the Emergency Power Reduction mechanism. For Downstream Ports, this bit is Reserved. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Not Supported</td></tr> <tr> <td>1h</td><td>Supported using Device Specific mechanism</td></tr> <tr> <td>2h</td><td>Supported using Form Factor or Device Specific mechanisms</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Not Supported	1h	Supported using Device Specific mechanism	2h	Supported using Form Factor or Device Specific mechanisms	3h	Reserved.

0h	LN Completer not Supported										
1h	LN Completer with 64 byte cachelines										
2h	LN Completer with 128 byte cachelines										
3h	Reserved.										
13:12	TPH_CPLR_SUPPORTED. Read-only. Reset: 0h. For Root Ports and Endpoints, indicates if the Completer supports TPH or Extended TPH. For all other functions, this field is Reserved. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>TPH and Extended TPH Completer not Supported</td></tr> <tr> <td>1h</td><td>TPH Completer Supported and Extended TPH Completer not Supported</td></tr> <tr> <td>2h</td><td>Reserved.</td></tr> <tr> <td>3h</td><td>TPH and Extended TPH Completer Supported</td></tr> </table>	Value	Description	0h	TPH and Extended TPH Completer not Supported	1h	TPH Completer Supported and Extended TPH Completer not Supported	2h	Reserved.	3h	TPH and Extended TPH Completer Supported
Value	Description										
0h	TPH and Extended TPH Completer not Supported										
1h	TPH Completer Supported and Extended TPH Completer not Supported										
2h	Reserved.										
3h	TPH and Extended TPH Completer Supported										
11	LTR_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the Latency Tolerance Reporting mechanism.										
10	NO_RO_ENABLED_P2P_PASSING. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a routing element supports never allowing posted requests with Relaxed Ordering attribute bit set, to pass each other. For Endpoints, this bit is Reserved.										
9	CAS128_CMPLT_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 128-bit AtomicOp completer.										
8	ATOMICOP_64CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 64-bit AtomicOp completer.										
7	ATOMICOP_32CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 32-bit AtomicOp completer.										
6	ATOMICOP_ROUTING_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a Port supports AtomicOp routing. For Endpoints, this bit is Reserved.										
5	ARI_FORWARDING_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if a Port supports ARI forwarding. For Upstream Ports, this bit is Reserved.										
4	CPL_TIMEOUT_DIS_SUPPORTED. Read-only. 0=Not Supported. 1=Supported. Indicates if a Requester supports the Completion Timeout disable mechanism. For functions that don't issue requests, this field is Reserved.										
3:0	CPL_TIMEOUT_RANGE_SUPPORTED. Read-only. Indicates if a Requester supports the Completion Timeout programmability mechanism. For functions that don't issue requests, this field is Reserved.										

	ValidValues:	
	Value	Description
	0h	Fixed
	1h	Range A Supported
	2h	Range B Supported
	3h	Ranges A & B Supported
	5h-4h	Reserved.
	6h	Ranges B & C Supported
	7h	Ranges A & B & C Supported
	Dh-8h	Reserved.
	Eh	Ranges B & C & D Supported
	Fh	Ranges A & B & C & D Supported

BXXD07F[1...2]x080 (NBIFRCCFG::DEVICE_CNTL2)

Read-write.

The Device Control 2 register controls device specific parameters.

Bits	Description										
15	END_END_TLP_PREFIX_BLOCKING. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports or Switch Upstream Ports only) Controls the ability of a Port to block TLPs containing End-End TLP Prefixes that target going out of this Egress Port.										
14:13	OBFF_EN. Read-write. Reset: 0h. Controls if the function is permitted to use Optimized Buffer Flush/Fill signaling. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Disable</td></tr> <tr> <td>1h</td><td>Enable OBFF Message A</td></tr> <tr> <td>2h</td><td>Enable OBFF Message B</td></tr> <tr> <td>3h</td><td>Enable OBFF WAKE#</td></tr> </table>	Value	Description	0h	Disable	1h	Enable OBFF Message A	2h	Enable OBFF Message B	3h	Enable OBFF WAKE#
Value	Description										
0h	Disable										
1h	Enable OBFF Message A										
2h	Enable OBFF Message B										
3h	Enable OBFF WAKE#										
12	TEN_BIT_TAG_REQUESTER_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a function is permitted to use a 10-bit Tag field as a Requester. When disabled the function uses the setting in the Extended Tag Field Enable bit.										
11	EMER_POWER_REDUCTION_REQUEST. Read-write. Reset: Fixed,0. 0=Normal Operation. 1=Enter Emergency Power Reduction state. Description: (Upstream Ports only) Triggers the function to enter the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.										
10	LTR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port is permitted to use the Latency Tolerance Reporting mechanism.										
9	IDO_COMPLETION_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of completions it returns.										
8	IDO_REQUEST_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of requests it initiates.										
7	ATOMICOP_EGRESS_BLOCKING. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Downstream Ports or Switch Upstream Ports only) Controls the ability of a Port to block AtomicOps that target going out of this Egress Port. For Endpoints, this bit is Reserved.										
6	ATOMICOP_REQUEST_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to initiate AtomicOp requests.										
5	ARI_FORWARDING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Downstream Ports only) Controls the ability of a Port to allow Configuration requests for Device Numbers greater than 0, when converting from a Type 1 Configuration cycle to a Type 0 Configuration cycle. For Upstream Ports, this bit is Reserved.										
4	CPL_TIMEOUT_DIS. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the ability of a function to use the completion timeout mechanism.										
3:0	CPL_TIMEOUT_VALUE. Read-write. Reset: 0h. Controls the completion timeout value for the function.										

Valid Values:

11:10	Reserved.																
9:8	CROSSLINK_RESOLUTION. Read-only. Reset: Fixed,0h. Indicates the state of the Port's crosslink negotiation (if supported). ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>No Information</td></tr> <tr> <td>1h</td><td>Completed as Upstream Port</td></tr> <tr> <td>2h</td><td>Completed as Downstream Port</td></tr> <tr> <td>3h</td><td>In Progress</td></tr> </table>	Value	Description	0h	No Information	1h	Completed as Upstream Port	2h	Completed as Downstream Port	3h	In Progress						
Value	Description																
0h	No Information																
1h	Completed as Upstream Port																
2h	Completed as Downstream Port																
3h	In Progress																
7	RTM2_PRESENCE_DET. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. When Two Retimers Presence Detect Supported bit is set, indicates if the Port detected two Retimers in the most recent link negotiation. This bit is sticky.																
6	RTM1_PRESENCE_DET. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. When Retimer Present Detect Supported bit is set, indicates if the Port detected a Retimer in the most recent link negotiation. This bit is sticky.																
5	LINK_EQUALIZATION_REQUEST_8GT. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 8.0 GT/s link equalization to be performed. This bit is sticky.																
4	EQUALIZATION_PHASE3_SUCCESS_8GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.																
3	EQUALIZATION_PHASE2_SUCCESS_8GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.																
2	EQUALIZATION_PHASE1_SUCCESS_8GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 8.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.																

1	EQUALIZATION_COMPLETE_8GT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the 8.0 GT/s Transmitter Equalization procedure has completed. This bit is sticky.
0	CUR_DEEMPHASIS_LEVEL . Read-only. Reset: 1. 0=-6.0 dB. 1=-3.5 dB. At 5.0 GT/s only, indicates the Port's transmitter de-emphasis level.

BXXD07F[1...2]x08C (NBIFRCCFG::SLOT_CAP2)

Read-only. Reset: Fixed,0000_0000h.

The Slot Capabilities 2 register identifies slot specific capabilities.

[_dev0_instNBIF0RC_nbio0_aliasHOST](#); BXXD07F1x08C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM][_dev0_instNBIF1RC_nbio0_aliasHOST](#); BXXD07F1x08C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM][_dev0_instNBIF1RC_nbio1_aliasHOST](#); BXXD07F2x08C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM][_dev\[1:0\]_instNBIF0RC_nbio0_aliasSMN](#); NBIO0NBIF0RCCFGx0000_[1:0]08C; NBIO0NBIF0RCCFG=1010_0000h[_dev0_instNBIF1RC_nbio0_aliasSMN](#); NBIO0NBIF1RCCFGx00000008C; NBIO0NBIF1RCCFG=1020_0000h[_dev\[1:0\]_instNBIF0RC_nbio1_aliasSMN](#); NBIO1NBIF0RCCFGx0000_[1:0]08C; NBIO1NBIF0RCCFG=1030_0000h[_dev0_instNBIF1RC_nbio1_aliasSMN](#); NBIO1NBIF1RCCFGx00000008C; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:1	Reserved.
0	INBAND_PD_DISABLE_SUPPORTED . Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the slot supports disabling the use of in-band presence to determine Presence Detect State and Component Presence.

BXXD07F[1...2]x090 (NBIFRCCFG::SLOT_CNTL2)

Read-write. Reset: Fixed,0000h.

The Slot Control 2 register controls slot specific parameters.

[_dev0_instNBIF0RC_nbio0_aliasHOST](#); BXXD07F1x090; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM][_dev0_instNBIF1RC_nbio0_aliasHOST](#); BXXD07F1x090; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM][_dev0_instNBIF1RC_nbio1_aliasHOST](#); BXXD07F2x090; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM][_dev\[1:0\]_instNBIF0RC_nbio0_aliasSMN](#); NBIO0NBIF0RCCFGx0000_[1:0]090; NBIO0NBIF0RCCFG=1010_0000h[_dev0_instNBIF1RC_nbio0_aliasSMN](#); NBIO0NBIF1RCCFGx000000090; NBIO0NBIF1RCCFG=1020_0000h[_dev\[1:0\]_instNBIF0RC_nbio1_aliasSMN](#); NBIO1NBIF0RCCFGx0000_[1:0]090; NBIO1NBIF0RCCFG=1030_0000h[_dev0_instNBIF1RC_nbio1_aliasSMN](#); NBIO1NBIF1RCCFGx000000090; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15:0	Reserved.

BXXD07F[1...2]x092 (NBIFRCCFG::SLOT_STATUS2)

Read-write. Reset: Fixed,0000h.

The Slot Status 2 register provides information about slot specific parameters.

[_dev0_instNBIF0RC_nbio0_aliasHOST](#); BXXD07F1x092; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM][_dev0_instNBIF1RC_nbio0_aliasHOST](#); BXXD07F1x092; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM][_dev0_instNBIF1RC_nbio1_aliasHOST](#); BXXD07F2x092; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM][_dev\[1:0\]_instNBIF0RC_nbio0_aliasSMN](#); NBIO0NBIF0RCCFGx0000_[1:0]092; NBIO0NBIF0RCCFG=1010_0000h[_dev0_instNBIF1RC_nbio0_aliasSMN](#); NBIO0NBIF1RCCFGx000000092; NBIO0NBIF1RCCFG=1020_0000h[_dev\[1:0\]_instNBIF0RC_nbio1_aliasSMN](#); NBIO1NBIF0RCCFGx0000_[1:0]092; NBIO1NBIF0RCCFG=1030_0000h[_dev0_instNBIF1RC_nbio1_aliasSMN](#); NBIO1NBIF1RCCFGx000000092; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15:0	Reserved.

BXXD07F[1...2]x0A0 (NBIFRCCFG::MSI_CAP_LIST)

Read-only.

Message Signaled Interrupt Capability header.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x0A0; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x0A0; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x0A0; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]0A0; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx000000A0; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]0A0; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx000000A0; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
15:8	NEXT_PTR. Read-only. Reset: C0h. Pointer to the next item in the capabilities list, or 00h if no other items exist.
7:0	CAP_ID. Read-only. Reset: Fixed,05h. A PCI-SIG defined ID number that indicates the nature and format of the capability.

BXXD07F[1...2]x0A2 (NBIFRCCFG::MSI_MSG_CNTL)

Message Signaled Interrupt Control register.

Bits	Description
------	-------------

15:0	MSI_EXT_DATA_64. Read-write. Reset: 0000h. Upper 16 bits for Message Data.
------	---

BXXD07F[1...2]x0C0 (NBIFRCCFG::SSID_CAP_LIST)

Read-only.

Subsystem ID Capability header.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x0C0; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x0C0; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x0C0; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]0C0; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx000000C0; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]0C0; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx000000C0; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
15:8	NEXT_PTR. Read-only. Pointer to the next item in the capabilities list, or 00h if no other items exist.
7:0	CAP_ID. Read-only. Reset: Fixed,0Dh. A PCI-SIG defined ID number that indicates the nature and format of the capability.

BXXD07F[1...2]x0C4 (NBIFRCCFG::SSID_CAP)

Read-only. Reset: 14A4_1022h.

Subsystem ID Capability register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x0C4; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x0C4; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x0C4; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]0C4; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx000000C4; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]0C4; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx000000C4; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:16	SUBSYSTEM_ID. Read-only. Reset: 14A4h. Subsystem ID. Specified by the vendor.
15:0	SUBSYSTEM_VENDOR_ID. Read-only. Reset: 1022h. Subsystem Vendor ID. Specified by the vendor.

BXXD07F[1...2]x100 (NBIFRCCFG::PCIE_VENDOR_SPECIFIC_ENH_CAP_LIST)

Read-only.

Vendor-Specific Extended Capability header.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x100; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x100; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x100; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]100; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000100; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]100; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000100; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 110h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,000Bh. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD07F[1...2]x104 (NBIFRCCFG::PCIE_VENDOR_SPECIFIC_HDR)

Read-only. Reset: Fixed,0101_0001h.

Vendor Specific Header register.

------	-------------

31:0	SCRATCH. Read-write. Reset: 0000_0000h. PCIE scratch register.
------	---

BXXD07F[1...2]x110 (NBIFRCCFG::PCIE_VC_ENH_CAP_LIST)

Read-only.

Virtual Channel Extended Capability header.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x110; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x110; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x110; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]110; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000110; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]110; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000110; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 140h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0002h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD07F[1...2]x114 (NBIFRCCFG::PCIE_PORT_VC_CAP_REG1)

Read-only.

Port VC Capability register 1.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x114; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x114; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x114; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]114; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000114; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]114; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000114; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description										
31:12	Reserved.										
11:10	PORT_ARB_TABLE_ENTRY_SIZE. Read-only. Reset: Fixed,0h. Indicates the size (in bits) of Port Arbitration table entry in the device, or must be 0 if Port Arbitration table is not supported. ValidValues: <table border="1"> <thead> <tr> <th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>0h</td><td>1 bit</td></tr> <tr> <td>1h</td><td>2 bits</td></tr> <tr> <td>2h</td><td>4 bits</td></tr> <tr> <td>3h</td><td>8 bits</td></tr> </tbody> </table>	Value	Description	0h	1 bit	1h	2 bits	2h	4 bits	3h	8 bits
Value	Description										
0h	1 bit										
1h	2 bits										
2h	4 bits										
3h	8 bits										
9:8	REF_CLK. Read-only. Reset: Fixed,0h. Indicates the reference clock for Virtual Channels that support time-based WRR Port Arbitration, otherwise it must be 0. ValidValues: <table border="1"> <thead> <tr> <th>Value</th><th>Description</th></tr> </thead> <tbody> <tr> <td>0h</td><td>100 ns</td></tr> <tr> <td>3h-1h</td><td>Reserved.</td></tr> </tbody> </table>	Value	Description	0h	100 ns	3h-1h	Reserved.				
Value	Description										
0h	100 ns										
3h-1h	Reserved.										
7	Reserved.										
6:4	LOW_PRIORITY_EXT_VC_COUNT. Read-only. Reset: Fixed,0h. Indicates the number of (extended) Virtual Channels in addition to the default VC belonging to the Low Priority Virtual Channel group.										
3	Reserved.										
2:0	EXT_VC_COUNT. Read-only. Reset: 0h. Indicates the number of (extended) Virtual Channels in addition to the default VC supported by the device.										

BXXD07F[1...2]x118 (NBIFRCCFG::PCIE_PORT_VC_CAP_REG2)

Read-only. Reset: Fixed,0000_0000h.

Port VC Capability register 2.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x118; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000120; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:24	PORT_ARB_TABLE_OFFSET. Read-only. Reset: Fixed,00h. Indicates the location of the Port Arbitration Table associated with the VC resource, or must be 0 if the Port Arbitration Table is not present.
23	Reserved.
22:16	MAX_TIME_SLOTS. Read-only. Reset: Fixed,00h. Indicates the maximum number of time slots (minus one) that the VC resource is capable of supporting, when configured for Timed WRR Port Arbitration.
15	REJECT_SNOOP_TRANS. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the Virtual Channel is permitted to reject transactions for which the No Snoop Attribute is applicable, but is not set.
14:8	Reserved.
7:0	PORT_ARB_CAP. Read-only. Reset: Fixed,01h. Indicates the types of Port Arbitration supported by the VC resource. Bit 0 = Fixed; Bit 1 = WRR-32; Bit 2 = WRR-64; Bit 3 = WRR-128; Bit 4 = Timed WRR-128; Bit 5 = WRR-256.

BXXD07F[1...2]x124 (NBIFRCCFG::PCIE_VC0_RESOURCE_CNTL)

VC0 Resource Control register.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x124; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000124; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31	VC_ENABLE. Read-only. Reset: Fixed,1. 0=Disable. 1=Enable. Controls the enabling of a Virtual Channel.
30:27	Reserved.
26:24	VC_ID. Read-only. Reset: Fixed,0h. Assigns a VC ID to the VC resource.
23:20	Reserved.
19:17	PORT_ARB_SELECT. Read-write. Reset: 0h. Configures the Port Arbitration for the VC resource by selecting one of the supported Port Arbitration schemes.
16	LOAD_PORT_ARB_TABLE. Read-only. Reset: Fixed,0. Updates the Port Arbitration logic from the Port Arbitration Table (if present) for the VC resource, when written with 1. Reads always return 0.
15:8	Reserved.
7:1	TC_VC_MAP_TC1_7. Read-write. Reset: 7Fh. Indicates the TCs that are mapped to the VC resource.
0	TC_VC_MAP_TC0. Read-only. Reset: Fixed,1. Indicates the TCs that are mapped to the VC resource.

BXXD07F[1...2]x12A (NBIFRCCFG::PCIE_VC0_RESOURCE_STATUS)

Read-only.

VC0 Resource Status register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x12A; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x12A; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x12A; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]12A; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000012A; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]12A; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000012A; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
15:2	Reserved.
1	VC_NEGOTIATION_PENDING. Read-only. Reset: 0. 0=Ready. 1=Pending. Indicates whether the Virtual Channel negotiation (initialization or disabling) is in pending state.
0	PORT_ARB_TABLE_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the contents of the Port Arbitration Table associated with the VC resource are coherent, or must be 0 if the Port Arbitration Table is not present.

BXXD07F[1...2]x12C (NBIFRCCFG::PCIE_VC1_RESOURCE_CAP)

Read-only. Reset: Fixed,0000_0001h.

VC1 Resource Capability register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x12C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x12C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x12C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]12C; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000012C; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]12C; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000012C; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:24	PORT_ARB_TABLE_OFFSET. Read-only. Reset: Fixed,00h. Indicates the location of the Port Arbitration Table associated with the VC resource, or must be 0 if the Port Arbitration Table is not present.
23:22	Reserved.
21:16	MAX_TIME_SLOTS. Read-only. Reset: Fixed,00h. Indicates the maximum number of time slots (minus one) that the VC resource is capable of supporting, when configured for Timed WRR Port Arbitration.
15	REJECT_SNOOP_TRANS. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the Virtual Channel is permitted to reject transactions for which the No Snoop Attribute is applicable, but is not set.
14:8	Reserved.
7:0	PORT_ARB_CAP. Read-only. Reset: Fixed,01h. Indicates the types of Port Arbitration supported by the VC resource. Bit 0 = Fixed; Bit 1 = WRR-32; Bit 2 = WRR-64; Bit 3 = WRR-128; Bit 4 = Timed WRR-128; Bit 5 = WRR-256.

BXXD07F[1...2]x130 (NBIFRCCFG::PCIE_VC1_RESOURCE_CNTL)

VC1 Resource Control register.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x130; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000136; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
15:2	Reserved.
1	VC_NEGOTIATION_PENDING. Read-only. Reset: 0. 0=Ready. 1=Pending. Indicates whether the Virtual Channel negotiation (initialization or disabling) is in pending state.
0	PORT_ARB_TABLE_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the contents of the Port Arbitration Table associated with the VC resource are coherent, or must be 0 if the Port Arbitration Table is not present.

BXXD07F[1...2]x140 (NBIFRCCFG::PCIE_DEV_SERIAL_NUM_ENH_CAP_LIST)

Read-only.

Device Serial Number Extended Capability header.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x140; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x140; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x140; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]140; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000140; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]140; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000140; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 150h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0003h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD07F[1...2]x144 (NBIFRCCFG::PCIE_DEV_SERIAL_NUM_DW1)

Read-only. Reset: 0000_0001h.

PCI-Express Device Serial Number (1st [DW](#)) register.`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x144; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x144; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x144; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]144; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000144; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]144; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000144; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:0	SERIAL_NUMBER_LO. Read-only. Reset: 0000_0001h. Lower 32-bits of IEEE defined 64-bit extended unique identifier. (EUI-64).

BXXD07F[1...2]x148 (NBIFRCCFG::PCIE_DEV_SERIAL_NUM_DW2)

Read-only. Reset: 000C_8700h.

PCI-Express Device Serial Number (2nd [DW](#)) register.`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x148; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x148; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x148; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]148; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000148; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]148; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000148; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:0	SERIAL_NUMBER_HI. Read-only. Reset: 000C_8700h. Upper 32-bits of IEEE defined 64-bit extended unique identifier. (EUI-64).

BXXD07F[1...2]x150 (NBIFRCCFG::PCIE_ADV_ERR_RPT_ENH_CAP_LIST)

Read-only.

Advanced Error Reporting Extended Capability header.

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000154; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:27	Reserved.
26	POISONED_TLP_EGRESS_BLOCKED_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Poisoned TLP Egress Blocked Error.
25	TLP_PREFIX_BLOCKED_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a TLP Prefix Blocked Error. This bit is sticky.
24	ATOMICOP_EGRESS_BLOCKED_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an AtomicOp Egress Blocked Error. This bit is sticky.
23	MC_BLOCKED_TLP_STATUS. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a MC Blocked TLP. This bit is sticky.
22	UNCORR_INT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an ECRC Error. This bit is sticky.
18	MAL_TLP_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Receiver Overflow Error.
16	UNEXP_CPL_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Completion Timeout Error. This bit is sticky.
13	FC_ERR_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Flow Control Protocol Error.
12	PSN_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Poisoned TLP Received Error. This bit is sticky.
11:6	Reserved.
5	SURPDN_ERR_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. (Downstream Ports only) Indicates if the function detects a Surprise Down Error.
4	DLP_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD07F[1...2]x158 (NBIFRCCFG::PCIE_UNCORR_ERR_MASK)

The Uncorrectable Error Mask register controls reporting of individual uncorrectable errors by a function.

23	MC_BLOCKED_TLP_MASK. Read-write. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a MC Blocked TLP Error. This bit is sticky.
22	UNCORR_INT_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an ECRC Error. This bit is sticky.
18	MAL_TLP_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a Receiver Overflow Error.
16	UNEXP_CPL_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Completion Timeout Error. This bit is sticky.
13	FC_ERR_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a Flow Control Protocol Error.
12	PSN_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Poisoned TLP Mask.
11:6	Reserved.
5	SURPDN_ERR_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. (Downstream Ports only) Controls if the function can report a Surprise Down Error.
4	DLP_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD07F[1...2]x15C (NBIFRCCFG::PCIE_UNCORR_ERR_SEVERITY)

The Uncorrectable Error Severity register controls whether an individual uncorrectable error is reported by a function as a Non-fatal or Fatal error.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x15C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

Bits	Description
31:27	Reserved.
26	POISONED_TLP_EGRESS_BLOCKED_SEVERITY . Read-only. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Poisoned TLP Egress Blocked Error.
25	TLP_PREFIX_BLOCKED_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a TLP Prefix Blocked Error. This bit is sticky.
24	ATOMICOP_EGRESS_BLOCKED_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an AtomicOp Egress Blocked Error. This bit is sticky.
23	MC_BLOCKED_TLP_SEVERITY . Read-write. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports a MC Blocked TLP Error. This bit is sticky.
22	UNCORR_INT_ERR_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an ECRC Error. This bit is sticky.
18	MAL_TLP_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Receiver Overflow Error.
16	UNEXP_CPL_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Completion Timeout Error. This bit is sticky.
13	FC_ERR_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Flow Control Protocol Error.
12	PSN_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Poisoned TLP Received Error. This bit is sticky.
11:6	Reserved.
5	SURPDN_ERR_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. (Downstream Ports only) Controls how the function reports a Surprise Down Error.
4	DLP_ERR_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD07F[1...2]x160 (NBIFRCCFG::PCIE_CORR_ERR_STATUS)

The Correctable Error Status register reports error status of individual correctable errors in a function.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x160; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000160; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:16	Reserved.
15	HDR_LOG_OVFL_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Header Log Overflow Error.
14	CORR_INT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Corrected Internal Error. This bit is sticky.
13	ADVISORY_NONFATAL_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Advisory Non-Fatal Error. This bit is sticky.
12	REPLAY_TIMER_TIMEOUT_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Replay Timer Timeout Error. This bit is sticky.
11:9	Reserved.
8	REPLAY_NUM_ROLLOVER_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a REPLAY_NUM Rollover Error. This bit is sticky.
7	BAD_DLLP_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Bad DLLP Error. This bit is sticky.
6	BAD_TLP_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Bad TLP Error. This bit is sticky.
5:1	Reserved.
0	RCV_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Receiver Error. This bit is sticky.

BXXD07F[1...2]x164 (NBIFRCCFG::PCIE_CORR_ERR_MASK)

The Correctable Error Mask register controls reporting of individual correctable errors by a function.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x164; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000164; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:16	Reserved.
15	HDR_LOG_OVFL_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a Header Log Overflow Error.
14	CORR_INT_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Corrected Internal Error. This bit is sticky.
13	ADVISORY_NONFATAL_ERR_MASK. Read-write. Reset: 1. 0=Unmasked. 1=Masked. Controls if the function can report an Advisory Non-Fatal Error. This bit is sticky.
12	REPLAY_TIMER_TIMEOUT_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Replay Timer Timeout Error. This bit is sticky.
11:9	Reserved.
8	REPLAY_NUM_ROLLOVER_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a REPLAY_NUM Rollover Error. This bit is sticky.
7	BAD_DLLP_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Bad DLLP Error. This bit is sticky.
6	BAD_TLP_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Bad TLP Error. This bit is sticky.
5:1	Reserved.
0	RCV_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Receiver Error. This bit is sticky.

BXXD07F[1...2]x168 (NBIFRCCFG::PCIE_ADV_ERR_CAP_CNTL)

Advanced Error Capabilities and Control register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x168; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x168; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x168; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]168; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000168; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]168; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000168; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:13	Reserved.
12	COMPLETION_TIMEOUT_LOG_CAPABLE . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording the TLP Prefix (if any) and the Header for the TLP corresponding to a detected Completion Timeout error.
11	TLP_PREFIX_LOG_PRESENT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. When the First Error Pointer is valid, indicates that the TLP Prefix Log register contains valid information. This bit is sticky. If End-End TLP Prefix Supported bit is not set, this bit is Reserved.
10	MULTI_HDR_RECD_EN . Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the function is permitted to record more than one error header.
9	MULTI_HDR_RECD_CAP . Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording more than one error header.
8	ECRC_CHECK_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function checks ECRC. This bit is sticky.
7	ECRC_CHECK_CAP . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of checking ECRC.
6	ECRC_GEN_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function generates ECRC. This bit is sticky.
5	ECRC_GEN_CAP . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of generating ECRC.
4:0	FIRST_ERR_PTR . Read-only. Reset: 00h. Indicates the bit position of the first error reported in the Uncorrectable Error Status register. This field is only valid if the indicated bit is also set. This field is sticky.

BXXD07F[1...2]x16C (NBIFRCCFG::PCIE_HDR_LOG0)

Read-only. Reset: 0000_0000h.

Header Log register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x16C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x16C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x16C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]16C; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000016C; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]16C; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000016C; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:0	TLP_HDR . Read-only. Reset: 0000_0000h. TLP Header 1st DW captures the first DW of the Header for the TLP corresponding to a detected error. This field is sticky.

BXXD07F[1...2]x170 (NBIFRCCFG::PCIE_HDR_LOG1)

Read-only. Reset: 0000_0000h.

Header Log register.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x170; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x170; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]

_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000178; NBIO0NBIF1RCCFG=1020_0000h

_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]178; NBIO1NBIF0RCCFG=1030_0000h

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000178; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:0	TLP_HDR. Read-only. Reset: 0000_0000h. TLP Header 4th DW captures the fourth DW (if present) of the Header for the TLP corresponding to a detected error. This field is sticky.

BXXD07F[1...2]x17C (NBIFRCCFG::PCIE_ROOT_ERR_CMD)

Read-write. Reset: 0000_0000h.

Root Error Command register.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x17C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x17C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x17C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]17C; NBIO0NBIF0RCCFG=1010_0000h_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000017C; NBIO0NBIF1RCCFG=1020_0000h_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]17C; NBIO1NBIF0RCCFG=1030_0000h_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000017C; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:3	Reserved.
2	FATAL_ERR_REP_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the generation of an interrupt when a Fatal error is reported by any of the devices in the hierarchy associated with this Root Port.
1	NONFATAL_ERR_REP_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the generation of an interrupt when a Non-fatal error is reported by any of the devices in the hierarchy associated with this Root Port.
0	CORR_ERR_REP_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the generation of an interrupt when a correctable error is reported by any of the devices in the hierarchy associated with this Root Port.

BXXD07F[1...2]x180 (NBIFRCCFG::PCIE_ROOT_ERR_STATUS)

Root Error Status register.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x180; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x180; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x180; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]180; NBIO0NBIF0RCCFG=1010_0000h_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000180; NBIO0NBIF1RCCFG=1020_0000h_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]180; NBIO1NBIF0RCCFG=1030_0000h_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000180; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:27	ADV_ERR_INT_MSG_NUM . Read-only. Reset: Fixed,00h. Indicates the MSI/MSI-X vector used for interrupts generated in association with any of the status bits in the AER capability structure.
26:9	Reserved.
8:7	ERR_COR_SUBCLASS . Read-only. Reset: 0h. When ERR_COR Subclass Capable bit is set, indicates the ERR_COR Subclass indicated in the received ERR_COR Message when the ERR_COR Received bit is not already set. This field is sticky.
6	FATAL_ERROR_MSG_RCVD . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if one or more Fatal Uncorrectable error Messages have been received. This bit is sticky.
5	NONFATAL_ERROR_MSG_RCVD . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if one or more Non-Fatal Uncorrectable error Messages have been received. This bit is sticky.
4	FIRST_UNCORRECTABLE_FATAL . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the first Uncorrectable error Message received is for a Fatal error. This bit is sticky.
3	MULT_ERR_FATAL_NONFATAL_RCVD . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if either a Fatal or a Non-fatal error is received and ERR_FATAL/NONFATAL Received is already set. This bit is sticky.
2	ERR_FATAL_NONFATAL_RCVD . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if either a Fatal or a Non-fatal error Message is received and this bit is not already set. This bit is sticky.
1	MULT_ERR_CORR_RCVD . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a correctable error Message is received and ERR_COR Received is already set. This bit is sticky.
0	ERR_CORR_RCVD . Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a correctable error Message is received and this bit is not already set. This bit is sticky.

BXXD07F[1...2]x184 (NBIFRCCFG::PCIE_ERR_SRC_ID)

Read-only. Reset: 0000_0000h.

The Error Source Identification register identifies the source (Requester ID) of first correctable and uncorrectable (Non-fatal/Fatal) errors reported in the Root Error Status register.

_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000270; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 2A0h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0019h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD07F[1...2]x274 (NBIFRCCFG::PCIE_LINK_CNTL3)

Link Control 3 register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x274; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x274; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x274; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]274; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000274; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]274; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000274; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:16	Reserved.
15:9	ENABLE_LOWER_SKP_OS_GEN. Read-only. Reset: Fixed,00h. Controls if the Port overrides SRIS requirements for SKP ordered set transmission rates by transmitting SKP ordered sets at the SRNS scheduling rate when in L0, for the indicated speed(s). ValidValues: See: NBIFRCCFG::PCIE_LINK_CNTL3[ENABLE_LOWER_SKP_OS_GEN] Valid Values.
8:2	Reserved.
1	LINK_EQUALIZATION_REQ_INT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports only) Controls if the Downstream Port generates an interrupt to indicate that the Link Equalization Request 8.0 GT/s , or the Link Equalization Request 16.0 GT/s, or the Link Equalization Request 32.0 GT/s bits have been set.
0	PERFORM_EQUALIZATION. Read-write. Reset: 0. 0=Normal Operation. 1=Perform Equalization. (Downstream Ports only) Forces the Downstream Port to perform link equalization, when a 1 is written to Retrain Link bit with Target Link Speed field set to 8.0 GT/s or higher.

NBIFRCCFG::PCIE_LINK_CNTL3[ENABLE_LOWER_SKP_OS_GEN] Valid Values

Value	Description
00h	Lower SKP Generation Disabled
01h	Enabled at 2.5 GT/s
02h	Enabled at 5.0 GT/s
03h	Enabled at 2.5 to 5.0 GT/s
04h	Enabled at 8.0 GT/s
05h	Enabled at 2.5 & 8.0 GT/s
06h	Enabled at 5.0 & 8.0 GT/s
07h	Enabled at 2.5 to 8.0 GT/s
08h	Enabled at 16.0 GT/s
09h	Enabled at 2.5 & 16.0 GT/s
0Ah	Enabled at 5.0 & 16.0 GT/s
0Bh	Enabled at 2.5 & 5.0 & 16.0 GT/s
0Ch	Enabled at 8.0 to 16.0 GT/s
0Dh	Enabled at 2.5 & 8.0 & 16.0 GT/s
0Eh	Enabled at 5.0 to 16.0 GT/s
0Fh	Enabled at 2.5 to 16.0 GT/s
10h	Enabled at 32.0 GT/s
11h	Enabled at 2.5 & 32.0 GT/s
12h	Enabled at 5.0 & 32.0 GT/s
13h	Enabled at 2.5 & 5.0 & 32.0 GT/s
14h	Enabled at 8.0 & 32.0 GT/s
15h	Enabled at 2.5 & 8.0 & 32.0 GT/s
16h	Enabled at 5.0 & 8.0 & 32.0 GT/s
17h	Enabled at 2.5 & 5.0 & 8.0 & 32.0 GT/s
18h	Enabled at 16.0 to 32.0 GT/s

19h	Enabled at 2.5 & 16.0 & 32.0 GT/s
1Ah	Enabled at 5.0 & 16.0 & 32.0 GT/s
1Bh	Enabled at 2.5 & 5.0 & 16.0 & 32.0 GT/s
1Ch	Enabled at 8.0 to 32.0 GT/s
1Dh	Enabled at 2.5 & 8.0 & 16.0 & 32.0 GT/s
1Eh	Enabled at 5.0 to 32.0 GT/s
1Fh	Enabled at 2.5 to 32.0 GT/s
7Fh-20h	Reserved.

BXXD07F[1...2]x278 (NBIFRCCFG::PCIE_LANE_ERROR_STATUS)

Read,Write-1-to-clear. Reset: 0000_0000h.

Lane Error Status register.

Bits	Description										
15:13	Reserved.										
12	UNCLAIMED_REQUEST_REDIRECT_CNTL. Read-write. Reset: 0. 0=Unsupported Request. 1=Forwarded upstream. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port memory aperture which is not within any of the component's Switch Downstream Port memory aperture or BAR claimed memory space.										
11:10	USP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port BAR claimed memory space. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Request allowed</td></tr> <tr> <td>1h</td><td>Request blocked</td></tr> <tr> <td>2h</td><td>Request redirected</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Request allowed	1h	Request blocked	2h	Request redirected	3h	Reserved.
Value	Description										
0h	Request allowed										
1h	Request blocked										
2h	Request redirected										
3h	Reserved.										
9:8	DSP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's BAR claimed memory space. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Request allowed</td></tr> <tr> <td>1h</td><td>Request blocked</td></tr> <tr> <td>2h</td><td>Request redirected</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Request allowed	1h	Request blocked	2h	Request redirected	3h	Reserved.
Value	Description										
0h	Request allowed										
1h	Request blocked										
2h	Request redirected										
3h	Reserved.										
7	IO_REQUEST_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component handles upstream I/O Requests as ACS Violations.										
6	DIRECT_TRANSLATED_P2P_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component overrides the ACS P2P Request Redirect and ACS P2P Egress Control mechanisms with P2P Memory Requests whose Address Translation field indicates a Translated address.										
5	P2P_EGRESS_CONTROL_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. In conjunction with the Egress Control Vector plus the ACS P2P Request Redirect and ACS Direct Translated P2P mechanisms, controls when to allow, disallow, or redirect P2P Requests.										
4	UPSTREAM_FORWARDING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component forwards Upstream any Request or Completion TLPs it receives that were redirected Upstream by a component lower in the hierarchy.										
3	P2P_COMPLETION_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component redirects P2P Completions Upstream; applicable only to Read Completions whose Relaxed Ordering Attribute is clear.										
2	P2P_REQUEST_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. In conjunction with ACS P2P Egress Control and ACS Direct Translated P2P mechanisms, controls if the component redirects P2P Requests Upstream.										
1	TRANSLATION_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component blocks all Upstream Memory Requests whose Address Translation field is not set to the default value.										
0	SOURCE_VALIDATION_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component validates the Bus Number from the Requester ID of Upstream Requests against the secondary or subordinate Bus Numbers.										

BXXD07F[1...2]x400 (NBIFRCCFG::PCIE_DLF_ENH_CAP_LIST)

Read-only.

Bits	Description
31	DLF_EXCHANGE_ENABLE. Read-only. Reset: Fixed,1. 0=Bypass DL_Feature negotiation. 1=Perform DL_Feature negotiation. Indicates if the Port will perform the Data Link Feature Exchange during Data Link Layer activation.
30:23	Reserved.
22:0	LOCAL_DLF_SUPPORTED. Read-only. Reset: Fixed,00_0000h. Indicates which Data Link Features the Port supports. This field is a bit vector that covers all supported features: Bit 0 is Scaled Flow Control Supported. If Data Link Feature Exchange Enable bit is set, this field's value is sent in the Port's transmitted Data Link Feature DLLP.

BXXD07F[1...2]x408 (NBIFRCCFG::DATA_LINK_FEATURE_STATUS)

Read-only. Reset: 8000_0001h.

Data Link Feature Status register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x408; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x408; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x408; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]408; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000408; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]408; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000408; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31	REMOTE_DLF_SUPPORTED_VALID. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if the Port received a Data Link Feature DLLP during DL_Feature negotiation, containing meaningful Remote Data Link Feature Supported and Remote Data Link Feature Ack fields. The bit is cleared when the Data Link Layer enters the DL_Inactive state.
30:23	Reserved.
22:0	REMOTE_DLF_SUPPORTED. Read-only. Reset: 00_0001h. Captures which Data Link Features the Remote Port supports. This field is a bit vector that covers all supported features: Bit 0 is Scaled Flow Control Supported. If Data Link Feature Exchange Enable bit is set, this field's value is from the Port's received Data Link Feature DLLP.

15:11	MODIFIED_TS_RESERVED_USAGE_MODES . Read-only. Reset: Fixed,00h. Reserved.
10	MODIFIED_TS_USAGE_MODE2_SUPPORTED . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports negotiating to use alternate Training Set protocols.
9	MODIFIED_TS_USAGE_MODE1_SUPPORTED . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports sending and receiving vendor specific Training Set Messages.
8	MODIFIED_TS_USAGE_MODE0_SUPPORTED . Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if this port supports standard PCI Express Training Set usage mode.
7:2	Reserved.
1	NO_EQ_NEEDED_SUPPORTED . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization is needed.
0	EQ_BYPASS_TO_HIGHEST_RATE_SUPPORTED . Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization for link speeds other than the highest common supported link speed are bypassed.

BXXD07F[1...2]x508 (NBIFRCCFG::LINK_CNTL_32GT)

Read-write. Reset: 0000_0000h.

The 32.0 [GT/s](#) Control register controls Physical Layer 32.0 GT/s specific parameters.`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x508; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x508; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x508; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]508; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000508; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]508; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000508; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:11	Reserved.
10:8	MODIFIED_TS_USAGE_MODE_SEL . Read-write. Reset: 0h. Description: (Downstream Ports only) Configures the Training Set usage mode by selecting one of the supported Training Set usage modes. This bit is sticky. For Upstream Ports, this bit is Reserved.
7:2	Reserved.
1	NO_EQ_NEEDED_DIS . Read-write. Reset: 0. 0=Enable. 1=Disable. Controls a port's ability to advertise that link equalization is needed. This bit is sticky.
0	EQ_BYPASS_TO_HIGHEST_RATE_DIS . Read-write. Reset: 0. 0=Enable. 1=Disable. Controls a port's ability to advertise that link equalization for link speeds other than the highest common supported link speed is bypassed. This bit is sticky.

BXXD07F[1...2]x50C (NBIFRCCFG::LINK_STATUS_32GT)

Indicates if the 32.0 [GT/s](#) Transmitter Equalization procedure has completed. This bit is sticky.

Bits	Description
31:11	Reserved.
10	NO_EQ_NEEDED_RECEIVED . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received, containing the No Equalization Needed bit set. Also indicates if a non-modified TS1 or non-modified TS2 was received, containing the No Equalization Needed encoding.
9	TRANSMITTER_PRECODE_REQUEST . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the Port will request the transmitter to use Precoding by setting the Precoding Request bit in TS1s/TS2s transmitted prior to entry to Recovery.Speed.
8	TRANSMITTER_PRECODING_ON . Read-only. Reset: 0. Indicates whether the receiver asked this transmitter to enable Precoding.
7:6	RECEIVED_ENHANCED_LINK_BEHAVIOR_CNTL . Read-only. Reset: 0h. Contains the Enhanced Link Behavior Control bits from the most recent TS1 or TS2 received in the Polling or Configuration states.
5	MODIFIED_TS_RECEIVED . Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received.
4	LINK_EQUALIZATION_REQUEST_32GT . Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 32.0 GT/s link equalization to be performed. This bit is sticky.
3	EQUALIZATION_PHASE3_SUCCESS_32GT . Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
2	EQUALIZATION_PHASE2_SUCCESS_32GT . Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
1	EQUALIZATION_PHASE1_SUCCESS_32GT . Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
0	EQUALIZATION_COMPLETE_32GT . Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if the Transmitter Equalization procedure at 32.0 GT/s has completed. This bit is sticky.

BXXD07F[1...2]x510 (NBIFRCCFG::RECEIVED_MODIFIED_TS_DATA1)

Read-only. Reset: 0000_0000h.

The Received Modified TS Data 1 register reports the values received in Modified TS1 or Modified TS2.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x510; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]

BXXD07F1x520...BXXD07F2x52F (NBIFRCCFG::LANE_EQUALIZATION_CNTL_32GT)

Read-only. Reset: FFh.

32.0 [GT/s](#) Lane Equalization Control register. There are 16 lanes (0 ~ 15); the lane number corresponds to "_n*" in the register instance. For example, `dev*_func*_instNBIF*_n15_*` means "32.0 GT/s Lane 15 Equalization Control register".`_addrNBIF0P0CFG1_dev0_n[15:0]_nbio0_aliasHOST; BXXD07F1x52[F:0]; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF0RC_n[15:0]_nbio0_aliasHOST; BXXD07F1x52[F:0]; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_addrNBIF1CFG0_dev0_n[15:0]_nbio0_aliasHOST; BXXD07F2x52[F:0]; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_n[15:0]_nbio1_aliasHOST; BXXD07F2x52[F:0]; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF0RC_n[15:0]_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_052[F:0]; NBIO0NBIF0RCCFG=1010_0000h``_dev1_instNBIF0RC_n[15:0]_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_152[F:0]; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_n[15:0]_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000_052[F:0]; NBIO0NBIF1RCCFG=1020_0000h``_dev0_instNBIF0RC_n[15:0]_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_052[F:0]; NBIO1NBIF0RCCFG=1030_0000h``_dev1_instNBIF0RC_n[15:0]_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_152[F:0]; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_n[15:0]_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000_052[F:0]; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
7:4	LANE_USP_32GT_TX_PRESET . Read-only. Reset: Fh. Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 32.0 GT/s .
3:0	LANE_DSP_32GT_TX_PRESET . Read-only. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 32.0 GT/s .

BXXD07F[1...2]x530 (NBIFRCCFG::PCIE_AP_ENH_CAP_LIST)

Read-only.

Alternate Protocol Extended Capability header.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x530; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x530; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x530; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]530; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000530; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]530; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000530; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 550h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,002Bh. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD07F[1...2]x534 (NBIFRCCFG::AP_CAP)

Read-only. Reset: 0000_0001h.

The Alternate Protocol Capabilities register identifies Alternate Protocol specific capabilities.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x534; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x534; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x534; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]534; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000534; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]534; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000534; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:9	Reserved.
8	AP_SELECTIVE_ENABLE_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the Alternate Protocol Selective Enable Mask register. For Upstream Ports, this bit is Reserved.
7:0	AP_COUNT. Read-only. Reset: 01h. Indicates the number of Alternate Protocols supported by one or more lanes of the Port.

BXXD07F[1...2]x538 (NBIFRCCFG::AP_CNTL)

Read-write. Reset: 0000_0000h.

The Alternate Protocol Control register controls Alternate Protocol specific parameters.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x538; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x538; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x538; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]538; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000538; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]538; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000538; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:9	Reserved.
8	AP_NEGOTIATION_GLOBAL_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls a port's ability to perform Alternate Protocol negotiation.
7:0	AP_INDEX_SELECT. Read-write. Reset: 00h. Controls which lane and which Alternate Protocol for that lane is visible in the Alternate Protocol Data registers.

BXXD07F[1...2]x53C (NBIFRCCFG::AP_DATA1)

Read-only. Reset: 0000_0000h.

The Alternate Protocol Data 1 register reports the values associated with the selected Alternate Protocol.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x53C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x53C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x53C; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_1[1:0]53C; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx0000053C; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_1[1:0]53C; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx0000053C; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:16	AP_VENDOR_ID. Read-only. Reset: 0000h. Captures the Vendor ID associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.
15:5	AP_DETAILS. Read-only. Reset: 000h. Captures the Alternate Protocol Details associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.
4:3	Reserved.
2:0	AP_USAGE_INFORMATION. Read-only. Reset: 0h. Captures the Modified TS Usage associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.

BXXD07F[1...2]x540 (NBIFRCCFG::AP_DATA2)

Read-only. Reset: 0000_0000h.

The Alternate Protocol Data 2 register reports the values associated with the selected Alternate Protocol.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x540; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x540; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x540; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_1[1:0]540; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000540; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_1[1:0]540; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000540; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:24	Reserved.
23:0	MODIFIED_TS_INFORMATION_2. Read-only. Reset: 00_0000h. Captures the Modified TS Information 2 associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.

BXXD07F[1...2]x544 (NBIFRCCFG::AP_SELECTIVE_ENABLE_MASK)

Reset: 0000_0001h.

Alternate Protocol Selective Enable Mask register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x544; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x544; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x544; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_1[1:0]544; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000544; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_1[1:0]544; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000544; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:1	AP_SELECTIVE_ENABLE_MASK_31_1. Read-write. Reset: 0000_0000h. When Alternate Protocol Negotiation Global Enable bit is set, controls if the corresponding Alternate Protocol is permitted for the lane of the Port. This field is a bit vector that covers all other supported Alternate Protocol for the lanes of the Port. This field is sticky.
0	AP_SELECTIVE_ENABLE_MASK_0. Read-only. Reset: 1. When Alternate Protocol Negotiation Global Enable bit is set, controls if the corresponding Alternate Protocol is permitted for the lane of the Port. Bit 0 corresponds to the standard PCI Express protocol.

BXXD07F[1...2]x570 (NBIFRCCFG::PCIE_RTR_ENH_CAP_LIST)

Read-only.

Readiness Time Reporting Extended Capability header.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x570; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x570; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x570; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]570; NBIO0NBIF0RCCFG=1010_0000h_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000570; NBIO0NBIF1RCCFG=1020_0000h_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]570; NBIO1NBIF0RCCFG=1030_0000h_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000570; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 580h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0022h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD07F[1...2]x574 (NBIFRCCFG::RTR_DATA1)

Read-only.

Readiness Time Reporting 1 register.

_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x574; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x574; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x574; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]574; NBIO0NBIF0RCCFG=1010_0000h_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000574; NBIO0NBIF1RCCFG=1020_0000h_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]574; NBIO1NBIF0RCCFG=1030_0000h_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000574; NBIO1NBIF1RCCFG=1040_0000h

Bits	Description
31	VALID. Read-only. Reset: 0. 0=Values not Ready. 1=Values are Valid. Indicates if the time values reported in this capability structure are valid.
30:24	Reserved.
23:12	DLUP_TIME. Read-only. Reset: Fixed,000h. When Valid bit is set, indicates the time required for the function to be configuration ready, following the Downstream Port reporting Data Link Layer Active is set. Encodings are the same as for RESET_TIME.
11:0	RESET_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following a conventional reset. The lower nine bits indicate the value. The upper three bits indicate the scale used for the value, encoded as: 0 = 1 ns; 1 = 32 ns; 2 = 1024 ns; 3 = 32768 ns; 4 = 1048576 ns; 5 = 33554432 ns.

BXXD07F[1...2]x578 (NBIFRCCFG::RTR_DATA2)

Read-only.

Readiness Time Reporting 2 register.

`_dev0_instNBIF0RC_nbio0_aliasHOST; BXXD07F1x578; BXX=IOHC::NB_BUS_NUM_CNTL_iohub0_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio0_aliasHOST; BXXD07F1x578; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio0_aliasSMN[NB_BUS_NUM]``_dev0_instNBIF1RC_nbio1_aliasHOST; BXXD07F2x578; BXX=IOHC::NB_BUS_NUM_CNTL_iohub1_nbio1_aliasSMN[NB_BUS_NUM]``_dev[1:0]_instNBIF0RC_nbio0_aliasSMN; NBIO0NBIF0RCCFGx0000_[1:0]578; NBIO0NBIF0RCCFG=1010_0000h``_dev0_instNBIF1RC_nbio0_aliasSMN; NBIO0NBIF1RCCFGx00000578; NBIO0NBIF1RCCFG=1020_0000h``_dev[1:0]_instNBIF0RC_nbio1_aliasSMN; NBIO1NBIF0RCCFGx0000_[1:0]578; NBIO1NBIF0RCCFG=1030_0000h``_dev0_instNBIF1RC_nbio1_aliasSMN; NBIO1NBIF1RCCFGx00000578; NBIO1NBIF1RCCFG=1040_0000h`

Bits	Description
31:24	Reserved.
23:12	D3HOTD0_TIME . Read-only. Reset: 80Ah. When Valid bit is set and Immediate Readiness on Return to D0 bit is clear, indicates the time required for the function to be configuration ready, following a D3hot to D0 transition. Encodings are the same as for RESET_TIME.
11:0	FLR_TIME . Read-only. Reset: Fixed,000h. When Valid bit is set and Function Level Reset Capability is set, indicates the time required for the function to be configuration ready, following a FLR. Encodings are the same as for RESET_TIME.

13.8.4.4 NBIFSWDSCFG Registers**BXXD00F2x000 (NBIFSWDSCFG::VENDOR_ID)**

Read-only. Reset: 1002h.

Vendor ID register.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x000;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000000; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
15:0	VENDOR_ID . Read-only. Reset: 1002h. Identifies the manufacturer of the device.

BXXD00F2x002 (NBIFSWDSCFG::DEVICE_ID)

Read-only. Reset: 14C4h.

Device ID register.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x002;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000002; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
15:0	DEVICE_ID . Read-only. Reset: 14C4h. Identifies the particular device.

BXXD00F2x004 (NBIFSWDSCFG::COMMAND)

Provides control over a function's ability to generate and respond to bus cycles.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x004;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000004; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:11	Reserved.
10	INT_DIS . Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the ability of a function to generate INTx interrupt Messages.
9	FAST_B2B_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
8	SERR_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to signal upstream, Non-fatal and Fatal errors detected by the function, and the ability of a Port to forward upstream, Non-fatal and Fatal signals received by the Port's secondary interface.
7	AD_STEPPING . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	PARITY_ERROR_RESPONSE . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to log errors in the Master Data Parity Error bit of the Status register.
5	PAL_SNOOP_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	MEM_WRITE_INVALIDATE_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
3	SPECIAL_CYCLE_EN . Read-only. Reset: Fixed,0. Does not apply to PCI Express.
2	BUS_MASTER_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to issue Memory and I/O Read/Write Requests, and the ability of a Port to forward Memory and I/O Read/Write Requests in the upstream direction.
1	MEMEN_DN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to accept Memory Space accesses.
0	IOEN_DN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to accept I/O Space accesses.

BXXD00F2x006 (NBIFSWDSCFG::STATUS)

Used to record status information for bus related events on the primary interface.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x006;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000006; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15	PARITY_ERROR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function receives a poisoned TLP on the primary interface.
14	SIGNALED_SYSTEM_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. For a function with its SERR Enable bit in the Command register set, indicates if the function signals a Non-fatal or Fatal error on the primary interface.
13	RECEIVED_MASTER_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Unsupported Request Completion Status on the primary interface.
12	RECEIVED_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Completer Abort Completion Status on the primary interface.
11	SIGNAL_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function completes a Request using Completer Abort Completion Status on the primary interface.
10:9	DEVSEL_TIMING. Read-only. Reset: Fixed,0h. Does not apply to PCI Express.
8	MASTER_DATA_PARITY_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: For a Requester with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Requester receives a poisoned Completion 2) Requester transmits a poisoned Request. For a Port with its Parity Error Response bit in the Command register set, indicates if either of the following two conditions occurs on the primary interface: 1) Port receives a poisoned Completion going downstream 2) Port transmits a poisoned Request upstream.
7	FAST_BACK_CAPABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	Reserved.
5	PCI_66_CAP. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	CAP_LIST. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates the presence of a capability list item.
3	INT_STATUS. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if an INTx interrupt Message is pending internally in the function.
2:1	Reserved.
0	IMMEDIATE_READINESS. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is able to successfully complete valid configuration cycles at any time following any type of reset.

BXXD00F2x008 (NBIFSWDSCFG::REVISION_ID)

Read-only. Reset: 01h.

Indicates a device specific revision identifier.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x008;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000008; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:4	MAJOR_REV_ID. Read-only. Reset: 0h. Indicates major revision identifier.
3:0	MINOR_REV_ID. Read-only. Reset: 1h. Indicates minor revision identifier.

BXXD00F2x009 (NBIFSWDSCFG::PROG_INTERFACE)

Read-only. Reset: Fixed,00h.

The Programming Interface register is used with the Base Class Code and the Sub-Class Code registers.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x009;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000009; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:0	PROG_INTERFACE . Read-only. Reset: Fixed,00h. Identifies the specific register-level programming interface of the function, if one is required.

BXXD00F2x00A (NBIFSWDSCFG::SUB_CLASS)

Read-only. Reset: 04h.

The Sub-Class Code register is used with the Base Class Code and the Programming Interface registers.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x00A;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000000A; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:0	SUB_CLASS . Read-only. Reset: 04h. Identifies more specifically the operation of the function.

BXXD00F2x00B (NBIFSWDSCFG::BASE_CLASS)

Read-only. Reset: 06h.

The Base Class Code register is used with the Sub-Class Code and the Programming Interface registers.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x00B;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000000B; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:0	BASE_CLASS . Read-only. Reset: 06h. Identifies broadly the type of operation the function performs.

BXXD00F2x00C (NBIFSWDSCFG::CACHE_LINE)

Read-write. Reset: 00h.

Cache Line Size register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x00C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000000C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:0	CACHE_LINE_SIZE . Read-write. Reset: 00h. Records the system cacheline size in units of DWORDs.

BXXD00F2x00D (NBIFSWDSCFG::LATENCY)

Read-only. Reset: Fixed,00h.

Master Latency Timer register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x00D;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000000D; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:0	LATENCY_TIMER . Read-only. Reset: Fixed,00h. Does not apply to PCI Express.

BXXD00F2x00E (NBIFSWDSCFG::HEADER)

Read-only.

Configuration Space header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x00E;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000000E; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7	DEVICE_TYPE. Read-only. Reset: 0. 0=Single-Function Device. 1=Multi-Function Device. Identifies if the device contains multiple functions.
6:0	HEADER_TYPE. Read-only. Reset: Fixed,01h. Identifies the layout of the Configuration Space header.
ValidValues:	
Value	Description
00h	Type 0 Header
01h	Type 1 Header
7Fh-02h	Reserved.

BXXD00F2x00F (NBIFSWDSCFG::BIST)

Read-only. Reset: Fixed,00h.

Used for control and status of built-in self tests.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x00F;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000000F; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7	BIST_CAP. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function supports BIST .
6	BIST_STRT. Read-only. Reset: Fixed,0. If the function supports BIST , initiates the test run, otherwise must be 0.
5:4	Reserved.
3:0	BIST_COMP. Read-only. Reset: Fixed,0h. If the function supports BIST , indicates the test result, otherwise must be 0.

BXXD00F2x010 (NBIFSWDSCFG::BASE_ADDR_1)

Read-write. Reset: 0000_0000h.

PCI CFG [BAR](#) 1.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x010;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000010; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	BASE_ADDR. Read-write. Reset: 0000_0000h. Base Address Register.

BXXD00F2x014 (NBIFSWDSCFG::BASE_ADDR_2)

Read-write. Reset: Fixed,0000_0000h.

PCI CFG [BAR](#) 2.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x014;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000014; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	BASE_ADDR. Read-write. Reset: Fixed,0000_0000h. Base Address Register.

BXXD00F2x018 (NBIFSWDSCFG::SUB_BUS_NUMBER_LATENCY)

Primary Bus Number, Secondary Bus Number, Subordinate Bus Number, and Secondary Latency Timer registers.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x018;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000018; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:24	SECONDARY_LATENCY_TIMER . Read-only. Reset: Fixed,00h. Does not apply to PCI Express.
23:16	SUB_BUS_NUM . Read-write. Reset: 00h. Records the bus number of the highest numbered bus segment which is behind the bridge.
15:8	SECONDARY_BUS . Read-write. Reset: 00h. Records the bus number of the bus segment to which the secondary interface of the bridge is connected.
7:0	PRIMARY_BUS . Read-write. Reset: 00h. Records the bus number of the bus segment to which the primary interface of the bridge is connected.

BXXD00F2x01C (NBIFSWDSCFG::IO_BASE_LIMIT)

Defines an I/O address range which is used by the bridge to determine when to forward I/O transactions from one interface to the other. For 32-bit addressing type, combines with I/O Base Upper 16 Bits and I/O Limit Upper 16 Bits registers.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x01C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000001C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description								
15:12	IO_LIMIT . Read-write. Reset: 0h. Bits 15-12 for range ending I/O address.								
11:8	IO_LIMIT_TYPE . Read-only. Reset: Fixed,1h. I/O Limit Addressing Type. ValidValues:								
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>16-bit</td></tr> <tr> <td>1h</td><td>32-bit</td></tr> <tr> <td>Fh-2h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	16-bit	1h	32-bit	Fh-2h	Reserved.
Value	Description								
0h	16-bit								
1h	32-bit								
Fh-2h	Reserved.								
7:4	IO_BASE . Read-write. Reset: 0h. Bits 15-12 for range starting I/O address.								
3:0	IO_BASE_TYPE . Read-only. Reset: Fixed,1h. I/O Base Addressing Type. ValidValues:								
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>16-bit</td></tr> <tr> <td>1h</td><td>32-bit</td></tr> <tr> <td>Fh-2h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	16-bit	1h	32-bit	Fh-2h	Reserved.
Value	Description								
0h	16-bit								
1h	32-bit								
Fh-2h	Reserved.								

BXXD00F2x01E (NBIFSWDSCFG::SECONDARY_STATUS)

Used to record status information for bus related events on the secondary interface.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x01E;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000001E; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15	PARITY_ERROR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function receives a poisoned TLP on the secondary interface.
14	RECEIVED_SYSTEM_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function receives a Non-fatal or Fatal error Message on the secondary interface.
13	RECEIVED_MASTER_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Unsupported Request Completion Status on the secondary interface.
12	RECEIVED_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Requester receives a Completion with Completer Abort Completion Status on the secondary interface.
11	SIGNAL_TARGET_ABORT. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a function completes a Request using Completer Abort Completion Status on the secondary interface.
10:9	DEVSEL_TIMING. Read-only. Reset: Fixed,0h. Does not apply to PCI Express.
8	MASTER_DATA_PARITY_ERROR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Description: For a Port with its Parity Error Response Enable bit in the Bridge Control register set, indicates if either of the following two conditions occurs on the secondary interface: 1) Port receives a poisoned Completion coming upstream 2) Port transmits a poisoned Request downstream.
7	FAST_BACK_CAPABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	Reserved.
5	PCI_66_CAP. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4:0	Reserved.

BXXD00F2x020 (NBIFSWDSCFG::MEM_BASE_LIMIT)

Defines a non-prefetchable memory address range which is used by the bridge to determine when to forward memory transactions from one interface to the other.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x020;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000020; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:20	MEM_LIMIT_31_20. Read-write. Reset: 000h. Bits 31-20 for range ending non-prefetchable memory address.
19:16	MEM_LIMIT_TYPE. Read-only. Reset: Fixed,0h. Must be 0.
15:4	MEM_BASE_31_20. Read-write. Reset: 000h. Bits 31-20 for range starting non-prefetchable memory address.
3:0	MEM_BASE_TYPE. Read-only. Reset: Fixed,0h. Must be 0.

BXXD00F2x024 (NBIFSWDSCFG::PREF_BASE_LIMIT)

Defines a prefetchable memory address range which is used by the bridge to determine when to forward memory transactions from one interface to the other. For 64-bit addressing type, combines with Prefetchable Base Upper 32 Bits and Prefetchable Limit Upper 32 Bits registers.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x024;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000024; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description								
31:20	PREF_MEM_LIMIT_31_20. Read-write. Reset: 000h. Bits 31-20 for range ending prefetchable memory address.								
19:16	PREF_MEM_LIMIT_TYPE. Read-only. Reset: Fixed,1h. Prefetchable Memory Limit Addressing Type. ValidValues:								
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>32-bit</td></tr> <tr> <td>1h</td><td>64-bit</td></tr> <tr> <td>Fh-2h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	32-bit	1h	64-bit	Fh-2h	Reserved.
Value	Description								
0h	32-bit								
1h	64-bit								
Fh-2h	Reserved.								
15:4	PREF_MEM_BASE_31_20. Read-write. Reset: 000h. Bits 31-20 for range starting prefetchable memory address.								
3:0	PREF_MEM_BASE_TYPE. Read-only. Reset: Fixed,1h. Prefetchable Memory Base Addressing Type. ValidValues:								
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>32-bit</td></tr> <tr> <td>1h</td><td>64-bit</td></tr> <tr> <td>Fh-2h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	32-bit	1h	64-bit	Fh-2h	Reserved.
Value	Description								
0h	32-bit								
1h	64-bit								
Fh-2h	Reserved.								

BXXD00F2x028 (NBIFSWDSCFG::PREF_BASE_UPPER)

Read-write. Reset: 0000_0000h.

For 64-bit addressing type, combines with Prefetchable Memory Base register to define a prefetchable memory address range starting which is used by the bridge to determine when to forward memory transactions from one interface to the other.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x028;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000028; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	PREF_BASE_UPPER. Read-write. Reset: 0000_0000h. Upper 32 bits for range starting 64-bit prefetchable memory address.

BXXD00F2x02C (NBIFSWDSCFG::PREF_LIMIT_UPPER)

Read-write. Reset: 0000_0000h.

For 64-bit addressing type, combines with Prefetchable Memory Limit register to define a prefetchable memory address range ending which is used by the bridge to determine when to forward memory transactions from one interface to the other.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x02C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000002C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	PREF_LIMIT_UPPER. Read-write. Reset: 0000_0000h. Upper 32 bits for range ending 64-bit prefetchable memory address.

BXXD00F2x030 (NBIFSWDSCFG::IO_BASE_LIMIT_HI)

Read-write. Reset: 0000_0000h.

For 32-bit addressing type, combines with I/O Base and I/O Limit registers to define an I/O address range which is used by the bridge to determine when to forward I/O transactions from one interface to the other.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x030;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000030; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:16	IO_LIMIT_31_16. Read-write. Reset: 0000h. Upper 16 bits for range ending 32-bit I/O address.
15:0	IO_BASE_31_16. Read-write. Reset: 0000h. Upper 16 bits for range starting 32-bit I/O address.

BXXD00F2x034 (NBIFSWDSCFG::CAP_PTR)

Read-only. Reset: Fixed,50h.

Capability Pointer.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x034;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000034; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:0	CAP_PTR. Read-only. Reset: Fixed,50h. Pointer to a linked list of additional capabilities implemented by this function, or 00h if no such items exist.

BXXD00F2x038 (NBIFSWDSCFG::ROM_BASE_ADDR)

Read-write. Reset: Fixed,0000_0000h.

PCI CFG Expansion ROM [BAR](#).

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x038;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000038; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	BASE_ADDR. Read-write. Reset: Fixed,0000_0000h. Expansion ROM Base Address Register.

BXXD00F2x03C (NBIFSWDSCFG::INTERRUPT_LINE)

Read-write. Reset: FFh.

Interrupt Line register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x03C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000003C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
7:0	INTERRUPT_LINE. Read-write. Reset: FFh. Communicates interrupt line routing information.

BXXD00F2x03D (NBIFSWDSCFG::INTERRUPT_PIN)

Read-write. Reset: Fixed,00h.

Interrupt Pin register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x03D;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000003D; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description														
7:0	INTERRUPT_PIN. Read-write. Reset: Fixed,00h. Identifies the legacy interrupt Message(s) the function uses.														
	ValidValues:														
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>00h</td><td>none</td></tr> <tr> <td>01h</td><td>INTA</td></tr> <tr> <td>02h</td><td>INTB</td></tr> <tr> <td>03h</td><td>INTC</td></tr> <tr> <td>04h</td><td>INTD</td></tr> <tr> <td>FFh-05h</td><td>Reserved.</td></tr> </table>	Value	Description	00h	none	01h	INTA	02h	INTB	03h	INTC	04h	INTD	FFh-05h	Reserved.
Value	Description														
00h	none														
01h	INTA														
02h	INTB														
03h	INTC														
04h	INTD														
FFh-05h	Reserved.														

BXXD00F2x03E (NBIFSWDSCFG::BRIDGE_CNTL)

Provides control over a port's ability to forward bus cycles between its primary and secondary interfaces.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x03E;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000003E; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:12	Reserved.
11	DISCARD_TIMER_SERR_ENABLE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
10	DISCARD_TIMER_STATUS. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
9	SECONDARY_DISCARD_TIMER. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
8	PRIMARY_DISCARD_TIMER. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
7	FAST_B2B_EN. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
6	SECONDARY_BUS_RESET. Read-write. Reset: 0. 0=Normal Operation. 1=Reset. Triggers a hot reset on the corresponding Port.
5	MASTER_ABORT_MODE. Read-only. Reset: Fixed,0. Does not apply to PCI Express.
4	VGA_DEC. Read-write. Reset: 0. 0=Disable. 1=Enable. For a Port with VGA Enable set, enables the bridge to provide 16-bit decoding of VGA I/O addresses, rather than 10-bit decoding.
3	VGA_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the bridge's ability to forward VGA compatible addresses from primary interface to secondary interface.
2	ISA_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Disables the bridge from forwarding I/O addresses, in the top 768 bytes of each 1 kB block in the I/O address range, from primary interface to secondary interface.
1	SERR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the forwarding of ERR_CORR, ERR_NONFATAL and ERR_FATAL from secondary interface to primary interface.
0	PARITY_RESPONSE_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the ability of a function to log errors in the Master Data Parity Error bit of the Secondary Status register.

BXXD00F2x050 (NBIFSWDSCFG::PMI_CAP_LIST)

Read-only. Reset: Fixed,5801h.

Power Management Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x050;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000050; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:8	NEXT_PTR. Read-only. Reset: Fixed,58h. Pointer to the next item in the capabilities list, or 00h if no other items exist.
7:0	CAP_ID. Read-only. Reset: Fixed,01h. A PCI-SIG defined ID number that indicates the nature and format of the capability.

BXXD00F2x052 (NBIFSWDSCFG::PMI_CAP)

Power Management Capabilities register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x052;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000052; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description																		
15:11	PME_SUPPORT. Read-only. Reset: 19h. Indicates the power states from which the function may generate a PME. This field is a bit vector that covers all Dx states. Bit 0 corresponds to D0.																		
10	D2_SUPPORT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates support for the D2 power state.																		
9	D1_SUPPORT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates support for the D1 power state.																		
8:6	AUX_CURRENT. Read-write. Reset: 0h. Indicates the amount of 3.3Vaux current required to support PME from D3cold. Valid Values:																		
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>0 mA</td></tr> <tr> <td>1h</td><td>55 mA</td></tr> <tr> <td>2h</td><td>100 mA</td></tr> <tr> <td>3h</td><td>160 mA</td></tr> <tr> <td>4h</td><td>220 mA</td></tr> <tr> <td>5h</td><td>270 mA</td></tr> <tr> <td>6h</td><td>320 mA</td></tr> <tr> <td>7h</td><td>375 mA</td></tr> </table>	Value	Description	0h	0 mA	1h	55 mA	2h	100 mA	3h	160 mA	4h	220 mA	5h	270 mA	6h	320 mA	7h	375 mA
Value	Description																		
0h	0 mA																		
1h	55 mA																		
2h	100 mA																		
3h	160 mA																		
4h	220 mA																		
5h	270 mA																		
6h	320 mA																		
7h	375 mA																		
5	DEV_SPECIFIC_INIT. Read-only. Reset: 0. 0=Not Required. 1=Required. Indicates if the function requires a Device Specific Initialization sequence, upon transition to D0.																		
4	IMMEDIATE_READINESS_ON_RETURN_TO_D0. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is able to successfully complete valid configuration cycles at any time following return to D0.																		
3	PME_CLOCK. Read-only. Reset: Fixed,0. Does not apply to PCI Express.																		
2:0	VERSION. Read-only. Reset: Fixed,3h. Indicates PCI-SIG defined capability structure version number.																		

BXXD00F2x054 (NBIFSWDSCFG::PMI_STATUS_CNTL)

Power Management Status/Control register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x054;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000054; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:24	PMI_DATA. Read-only. Reset: Fixed,00h. Data.
23	BUS_PWR_EN. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if Secondary Bus Clock Control is supported.
22	B2_B3_SUPPORT. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if Secondary Bus Power Control is supported.
21:16	Reserved.
15	PME_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a PME is pending internally in the function. When auxiliary power is consumed, this field is sticky.
14:13	DATA_SCALE. Read-only. Reset: Fixed,0h. Data Scale.
12:9	DATA_SELECT. Read-only. Reset: Fixed,0h. Data Select.
8	PME_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls a function's ability to generate a PME. When auxiliary power is consumed, this field is sticky.
7:4	Reserved.
3	NO_SOFT_RESET. Read-only. Reset: 0. 0=Reset on D3hot to D0. 1=No Reset on D3hot to D0. Indicates if the function does not reset on a transition from D3hot to D0.
2	Reserved.
1:0	POWER_STATE. Read-write. Reset: 0h. Writes set the function to the written power state. Reads return the function's current power state.
ValidValues:	
Value	Description
0h	D0
1h	D1
2h	D2
3h	D3

BXXD00F2x058 (NBIFSWDSCFG::PCIE_CAP_LIST)

Read-only.

PCI Express Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x058;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000058; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:8	NEXT_PTR. Read-only. Reset: A0h. Pointer to the next item in the capabilities list, or 00h if no other items exist.
7:0	CAP_ID. Read-only. Reset: Fixed,10h. A PCI-SIG defined ID number that indicates the nature and format of the capability.

BXXD00F2x05A (NBIFSWDSCFG::PCIE_CAP)

Read-only.

The PCI Express Capabilities register identifies PCI Express device type and associated capabilities.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x05A;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000005A; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description																								
15:14	Reserved.																								
13:9	INT_MESSAGE_NUM. Read-only. Reset: Fixed,00h. Indicates the MSI/MSI-X vector used for interrupts generated in association with any of the status bits in the PCI Express capability structure.																								
8	SLOT_IMPLEMENTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Link associated with this Port is connected to a slot. For Upstream Ports, this bit is undefined.																								
7:4	DEVICE_TYPE. Read-only. Reset: 6h. Indicates the type of PCI Express device. ValidValues:																								
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>PCI Express Endpoint</td></tr> <tr> <td>1h</td><td>Legacy PCI Express Endpoint</td></tr> <tr> <td>3h-2h</td><td>Reserved.</td></tr> <tr> <td>4h</td><td>Root Port of PCI Express Root Complex</td></tr> <tr> <td>5h</td><td>Upstream Port of PCI Express Switch</td></tr> <tr> <td>6h</td><td>Downstream Port of PCI Express Switch</td></tr> <tr> <td>7h</td><td>PCI Express to PCI/PCI-X Bridge</td></tr> <tr> <td>8h</td><td>PCI/PCI-X to PCI Express Bridge</td></tr> <tr> <td>9h</td><td>Root Complex Integrated Endpoint</td></tr> <tr> <td>Ah</td><td>Root Complex Event Collector</td></tr> <tr> <td>Fh-Bh</td><td>Reserved.</td></tr> </table>	Value	Description	0h	PCI Express Endpoint	1h	Legacy PCI Express Endpoint	3h-2h	Reserved.	4h	Root Port of PCI Express Root Complex	5h	Upstream Port of PCI Express Switch	6h	Downstream Port of PCI Express Switch	7h	PCI Express to PCI/PCI-X Bridge	8h	PCI/PCI-X to PCI Express Bridge	9h	Root Complex Integrated Endpoint	Ah	Root Complex Event Collector	Fh-Bh	Reserved.
Value	Description																								
0h	PCI Express Endpoint																								
1h	Legacy PCI Express Endpoint																								
3h-2h	Reserved.																								
4h	Root Port of PCI Express Root Complex																								
5h	Upstream Port of PCI Express Switch																								
6h	Downstream Port of PCI Express Switch																								
7h	PCI Express to PCI/PCI-X Bridge																								
8h	PCI/PCI-X to PCI Express Bridge																								
9h	Root Complex Integrated Endpoint																								
Ah	Root Complex Event Collector																								
Fh-Bh	Reserved.																								
3:0	VERSION. Read-only. Reset: 2h. Indicates PCI-SIG defined capability structure version number.																								

BXXD00F2x05C (NBIFSWDSCFG::DEVICE_CAP)

Read-only.

The Device Capabilities register identifies device specific capabilities.

Bits	Description																		
31:29	Reserved.																		
28	FLR_CAPABLE. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Endpoints only) Indicates if the function supports Function Level Resets. For non-Endpoints this field is Reserved.																		
27:26	CAPTURED_SLOT_POWER_SCALE. Read-only. Reset: Fixed,0h. (Upstream Ports only) Indicates the scale used for the Slot Power Limit Value. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1.0x</td></tr> <tr> <td>1h</td><td>0.1x</td></tr> <tr> <td>2h</td><td>0.01x</td></tr> <tr> <td>3h</td><td>0.001x</td></tr> </table>	Value	Description	0h	1.0x	1h	0.1x	2h	0.01x	3h	0.001x								
Value	Description																		
0h	1.0x																		
1h	0.1x																		
2h	0.01x																		
3h	0.001x																		
25:18	CAPTURED_SLOT_POWER_LIMIT. Read-only. Reset: Fixed,00h. (Upstream Ports only) In combination with the Slot Power Limit Scale value, indicates the upper limit on power supplied by slot.																		
17	Reserved.																		
16	ERR_COR_SUBCLASS_CAPABLE. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the ERR_COR Subclass field in ERR_COR messages.																		
15	ROLE_BASED_ERR_REPORTING. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates the function implements Role-Based Error Reporting functionality.																		
14:12	Reserved.																		
11:9	L1_ACCEPTABLE_LATENCY. Read-only. Reset: Fixed,0h. Description: (Endpoints only) Indicates the maximum acceptable latency that an Endpoint can withstand due to the transition from L1 state to L0 state. For non-Endpoints this field is Reserved. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1 us</td></tr> <tr> <td>1h</td><td>2 us</td></tr> <tr> <td>2h</td><td>4 us</td></tr> <tr> <td>3h</td><td>8 us</td></tr> <tr> <td>4h</td><td>16 us</td></tr> <tr> <td>5h</td><td>32 us</td></tr> <tr> <td>6h</td><td>64 us</td></tr> <tr> <td>7h</td><td>No Limit</td></tr> </table>	Value	Description	0h	1 us	1h	2 us	2h	4 us	3h	8 us	4h	16 us	5h	32 us	6h	64 us	7h	No Limit
Value	Description																		
0h	1 us																		
1h	2 us																		
2h	4 us																		
3h	8 us																		
4h	16 us																		
5h	32 us																		
6h	64 us																		
7h	No Limit																		
8:6	L0S_ACCEPTABLE_LATENCY. Read-only. Reset: Fixed,0h. Description: (Endpoints only) Indicates the maximum acceptable total latency that Endpoint can withstand due to the transition from L0s state to L0 state. For non-Endpoints this field is Reserved.																		

	ValidValues:	
	Value	Description
	0h	64 ns
	1h	128 ns
	2h	256 ns
	3h	512 ns
	4h	1 us
	5h	2 us
	6h	4 us
	7h	No Limit
5	EXTENDED_TAG . Read-only. Reset: Fixed,1. 0=5 Bit Tag Supported. 1=8 Bit Tag Supported. When 10-Bit Tag Requester Supported bit is clear, indicates the maximum supported size of the Tag field as a Requester.	
4:3	PHANTOM_FUNC . Read-only. Reset: Fixed,0h. Indicates the support for use of unclaimed function numbers to extend the number of outstanding transactions allowed by logically combining unclaimed function numbers with the Tag identifier.	
	ValidValues:	
	Value	Description
	0h	No Phantom Functions
	1h	1 Phantom Function
	2h	3 Phantom Functions
	3h	7 Phantom Functions
2:0	MAX_PAYLOAD_SUPPORT . Read-only. Reset: 2h. Indicates the maximum payload size that the function can support for TLPs.	
	ValidValues:	
	Value	Description
	0h	128 Bytes
	1h	256 Bytes
	2h	512 Bytes
	3h	1024 Bytes
	4h	2048 Bytes
	5h	4096 Bytes
	7h-6h	Reserved.

Bits	Description																
15	BRIDGE_CFG_RETRY_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Description: (Bridges only) Controls if a PCI Express to PCI/PCI-X Bridge is permitted to return Configuration Retry Status. For non-Bridges and non-Endpoints this bit is Reserved.																
14:12	MAX_READ_REQUEST_SIZE. Read-write. Reset: 2h. Controls the maximum Read Request size for the function as a Requester. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>128 Bytes</td></tr> <tr> <td>1h</td><td>256 Bytes</td></tr> <tr> <td>2h</td><td>512 Bytes</td></tr> <tr> <td>3h</td><td>1024 Bytes</td></tr> <tr> <td>4h</td><td>2048 Bytes</td></tr> <tr> <td>5h</td><td>4096 Bytes</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	128 Bytes	1h	256 Bytes	2h	512 Bytes	3h	1024 Bytes	4h	2048 Bytes	5h	4096 Bytes	7h-6h	Reserved.
Value	Description																
0h	128 Bytes																
1h	256 Bytes																
2h	512 Bytes																
3h	1024 Bytes																
4h	2048 Bytes																
5h	4096 Bytes																
7h-6h	Reserved.																
11	NO_SNOOP_EN. Read-write. Reset: 1. 0=Disable. 1=Enable. Controls if the function is permitted to set the No Snoop bit in the Requester Attributes of transactions it initiates that do not require hardware enforced cache coherency.																
10	AUX_POWER_PM_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if a function is permitted to draw AUX power independent of PME AUX power.																
9	PHANTOM_FUNC_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use unclaimed function numbers as Phantom Functions to extend the number of outstanding transaction identifiers.																
8	EXTENDED_TAG_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. When 10-Bit Tag Requester Enable bit is clear, controls if a function is permitted to use an 8-bit Tag field as a Requester. When both bits are disabled the function is restricted to use a 5-bit Tag field.																
7:5	MAX_PAYLOAD_SIZE. Read-write. Reset: 0h. Controls the maximum TLP payload size for the function. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>128 Bytes</td></tr> <tr> <td>1h</td><td>256 Bytes</td></tr> <tr> <td>2h</td><td>512 Bytes</td></tr> <tr> <td>3h</td><td>1024 Bytes</td></tr> <tr> <td>4h</td><td>2048 Bytes</td></tr> <tr> <td>5h</td><td>4096 Bytes</td></tr> <tr> <td>7h-6h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	128 Bytes	1h	256 Bytes	2h	512 Bytes	3h	1024 Bytes	4h	2048 Bytes	5h	4096 Bytes	7h-6h	Reserved.

Bits	Description
15:7	Reserved.
6	EMER_POWER_REDUCTION_DETECTED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Description: (Upstream Ports only) When Emergency Power Reduction Supported field is 1 or 2, indicates if the function has entered the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.
5	TRANSACTIONS_PEND. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function has issued Non-Posted Requests, on its own behalf, which have not been completed.
4	AUX_PWR. Read-write. Reset: 0. 0=Not Detected. 1=Detected. Functions that require AUX power report this bit as set if AUX power is detected by the function.
3	USR_DETECTED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function received an Unsupported Request.
2	FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Fatal errors detected.
1	NON_FATAL_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of Non-fatal errors detected.
0	CORR_ERR. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates status of correctable errors detected.

BXXD00F2x064 (NBIFSWDSCFG::LINK_CAP)

Read-only.

The Link Capabilities register identifies Link specific capabilities.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x064;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

Bits	Description																		
31:24	PORT_NUMBER. Read-only. Reset: 00h. Indicates the Port number for the Link.																		
23	Reserved.																		
22	ASPM_OPTIONALITY_COMPLIANCE. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if the Port supports the ASPM Optionality functionality.																		
21	LINK_BW_NOTIFICATION_CAP. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the Link Bandwidth Notification status and interrupt mechanisms. For Upstream Ports, this bit is Reserved.																		
20	DL_ACTIVE_REPORTING_CAPABLE. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the reporting of DL_Active state of the Data Link Control and Management State Machine. For Upstream Ports, this bit is Reserved.																		
19	SURPRISE_DOWN_ERR_REPORTING. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the detecting and reporting of a Surprise Down error condition. For Upstream Ports, this bit is Reserved.																		
18	CLOCK_POWER_MANAGEMENT. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Upstream Ports only) Indicates if the Port tolerates removal of REFCLK via the CLKREQ# mechanism when the Link is in L1 or L2/L3 Ready. For Downstream Ports, this bit is Reserved.																		
17:15	L1_EXIT_LATENCY. Read-only. Reset: 0h. Indicates the L1 exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L1 to L0. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>up to 999 ns</td></tr> <tr> <td>1h</td><td>1 to 1.9 us</td></tr> <tr> <td>2h</td><td>2 to 3.9 us</td></tr> <tr> <td>3h</td><td>4 to 7.9 us</td></tr> <tr> <td>4h</td><td>8 to 15.9 us</td></tr> <tr> <td>5h</td><td>16 to 31.9 us</td></tr> <tr> <td>6h</td><td>32 to 64 us</td></tr> <tr> <td>7h</td><td>more than 64 us</td></tr> </table>	Value	Description	0h	up to 999 ns	1h	1 to 1.9 us	2h	2 to 3.9 us	3h	4 to 7.9 us	4h	8 to 15.9 us	5h	16 to 31.9 us	6h	32 to 64 us	7h	more than 64 us
Value	Description																		
0h	up to 999 ns																		
1h	1 to 1.9 us																		
2h	2 to 3.9 us																		
3h	4 to 7.9 us																		
4h	8 to 15.9 us																		
5h	16 to 31.9 us																		
6h	32 to 64 us																		
7h	more than 64 us																		
14:12	L0S_EXIT_LATENCY. Read-only. Reset: 0h. Indicates the L0s exit latency for the Link. The value reported indicates the length of time this Port requires to complete transition from L0s to L0.																		

	ValidValues:	
	Value	Description
	0h	up to 63 ns
	1h	64 to 127 ns
	2h	128 to 255 ns
	3h	256 to 511 ns
	4h	512 to 999 ns
	5h	1 to 1.9 us
	6h	2 to 4 us
	7h	more than 4 us
11:10	PM_SUPPORT. Read-only. Reset: 3h. Indicates the level of ASPM supported on the Link.	
	ValidValues:	
	Value	Description
	0h	No ASPM Supported
	1h	L0s Supported
	2h	L1 Supported
	3h	L0s and L1 Supported
9:4	LINK_WIDTH. Read-only. Reset: 10h. Indicates the maximum width of the Link.	
	ValidValues:	
	Value	Description
	00h	Reserved.
	01h	x1
	02h	x2
	03h	Reserved.
	04h	x4
	07h-05h	Reserved.
	08h	x8
	0Bh-09h	Reserved.
	0Ch	x12
	0Fh-0Dh	Reserved.
	10h	x16
	1Fh-11h	Reserved.
	20h	x32
	3Fh-21h	Reserved.
3:0	LINK_SPEED. Read-only. Reset: 5h. Indicates the maximum speed of the Link.	
	ValidValues:	
	Value	Description
	0h	Reserved.
	1h	2.5 GT/s
	2h	5.0 GT/s
	3h	8.0 GT/s
	4h	16.0 GT/s
	5h	32.0 GT/s
	Fh-6h	Reserved.

BXXD00F2x068 (NBIFSWDSCFG::LINK_CNTL)

The Link Control register controls Link specific parameters.

Bits	Description										
15:14	DRS_SIGNALING_CONTROL. Read-write. Reset: Fixed,0h. (Downstream Ports only) When DRS Supported bit is set, controls the mechanism used to report reception of a DRS Message. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>DRS not Reported</td></tr> <tr> <td>1h</td><td>DRS Interrupt Enabled</td></tr> <tr> <td>2h</td><td>DRS to FRS Signaling Enabled</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	DRS not Reported	1h	DRS Interrupt Enabled	2h	DRS to FRS Signaling Enabled	3h	Reserved.
Value	Description										
0h	DRS not Reported										
1h	DRS Interrupt Enabled										
2h	DRS to FRS Signaling Enabled										
3h	Reserved.										
13:12	Reserved.										
11	LINK_AUTONOMOUS_BW_INT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports only) Controls if the function generates an interrupt to indicate that the Link Autonomous Bandwidth Status bit has been set.										
10	LINK_BW_MANAGEMENT_INT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports only) Controls if the function generates an interrupt to indicate that the Link Bandwidth Management Status bit has been set.										
9	HW_AUTONOMOUS_WIDTH_DISABLE. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the Port's ability to autonomously direct changes in link width.										
8	CLOCK_POWER_MANAGEMENT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Upstream Ports only) Controls if the function is permitted to use CLKREQ# signal to power manage the Link clock. For Downstream Ports, this bit is Reserved.										
7	EXTENDED_SYNC. Read-write. Reset: 0. 0=Disable. 1=Enable. Forces the transmission of additional ordered sets, exiting the L0s or Recovery states.										
6	COMMON_CLOCK_CFG. Read-write. Reset: 0. 0=Same REFCLK not Used. 1=Same REFCLK Used. Indicates if this component and the component at the opposite end of this Link are operating with a distributed common reference clock.										
5	RETRAIN_LINK. Write-only. Reset: 0. 0=Normal Operation. 1=Retrain Link. (Downstream Ports only) A write of 1 to this bit initiates Link retraining by directing the Physical Layer LTSSM to the Recovery state. Reads of this bit always return 0b.										
4	LINK_DIS. Read-write. Reset: 0. 0=Normal Operation. 1=Disable Link. Description: (Downstream Ports only) Disables the Link when set to 1, by directing the Physical Layer LTSSM to the Disabled state. For Upstream Ports, this bit is Reserved.										
3	READ_CPL_BOUNDARY. Read-write. Reset: Fixed,0. 0=64 Byte. 1=128 Byte. Description: Indicates the RCB value for the Root Port sourcing the topology associated with the Link. For Switches, this bit is Reserved.										
2	PTM_PROP_DELAY_ADAPT_INTER_B. Read-write. Reset: Fixed,0. 0=Interpretation A. 1=Interpretation B. Description: Controls the interpretation of the Propagation Delay[31:0] field of the PTM Message. For devices that don't support PTM, this bit is Reserved.										
1:0	PM_CONTROL. Read-write. Reset: 0h. Controls the level of ASPM enabled on the Link.										

	ValidValues:	
	Value	Description
	0h	Disabled
	1h	Tx_L0s Entry Enabled
	2h	L1 Entry Enabled
	3h	Tx_L0s and L1 Entry Enabled

BXXD00F2x06A (NBIFSWDSCFG::LINK_STATUS)

The Link Status register provides information about Link specific parameters.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x06A;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

Bits	Description																														
15	LINK_AUTONOMOUS_BW_STATUS. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates that hardware has autonomously changed the Link's speed or width, without the Port transitioning through DL_Down status, for reasons other than to attempt to correct unreliable Link operation.																														
14	LINK_BW_MANAGEMENT_STATUS. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Description: Indicates that either of the following has occurred without the Port transitioning through DL_Down status: A Link retraining has completed following a write of 1 to the Retrain Link bit. Hardware has changed the Link's speed or width to attempt to correct unreliable Link operation, either through an LTSSM timeout or a higher level process.																														
13	DL_ACTIVE. Read-only. Reset: 1. 0=Not DL_Active state. 1=DL_Active state. If Data Link Layer Link Active Capability is supported and when the optionally supported SFI DLL State Mask bit is clear, indicates the status of the Data Link Control and Management State Machine.																														
12	SLOT_CLOCK_CFG. Read-only. Reset: Fixed,1. 0=Same REFCLK not Required. 1=Same REFCLK Required. Indicates if the component uses the same physical reference clock that the platform provides on the connector.																														
11	LINK_TRAINING. Read-only. Reset: 0. 0=Normal. 1=Link Training in Progress. Description: (Downstream Ports only) Indicates that Link training is in progress (Physical Layer LTSSM in Configuration or Recovery state) or that 1 was written to the Retrain Link bit but Link training has not yet begun. Hardware clears this bit once Link training is complete. For Upstream Ports, this bit is Reserved.																														
10	Reserved.																														
9:4	NEGOTIATED_LINK_WIDTH. Read-only. Reset: 10h. Indicates the negotiated width of the Link. ValidValues:

Bits	Description										
31:19	PHYSICAL_SLOT_NUM. Read-write. Reset: Fixed,0000h. Indicates the physical slot number attached to this Port.										
18	NO_COMMAND_COMPLETED_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this slot does not generate software notification when an issued command is completed by the Hot-Plug Controller.										
17	ELECTROMECH_INTERLOCK_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an Electromechanical Interlock is implemented for this slot.										
16:15	SLOT_PWR_LIMIT_SCALE. Read-write. Indicates the scale used for the Slot Power Limit Value.										
ValidValues:											
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1.0x</td></tr> <tr> <td>1h</td><td>0.1x</td></tr> <tr> <td>2h</td><td>0.01x</td></tr> <tr> <td>3h</td><td>0.001x</td></tr> </table>	Value	Description	0h	1.0x	1h	0.1x	2h	0.01x	3h	0.001x
Value	Description										
0h	1.0x										
1h	0.1x										
2h	0.01x										
3h	0.001x										
14:7	SLOT_PWR_LIMIT_VALUE. Read-write. In combination with the Slot Power Limit Scale value, indicates the upper limit on power supplied by this slot.										
6	HOTPLUG_CAPABLE. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if this slot is capable of supporting Hot-Plug operations.										
5	HOTPLUG_SURPRISE. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an adapter present in this slot might be removed from the system without any prior notification.										
4	PWR_INDICATOR_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a Power Indicator is implemented for this slot.										
3	ATTN_INDICATOR_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an Attention Indicator is implemented for this slot.										
2	MRL_SENSOR_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a Manually-operated Retention Latch Sensor is implemented for this slot.										
1	PWR_CONTROLLER_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a Power Controller is implemented for this slot.										
0	ATTN_BUTTON_PRESENT. Read-write. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if an Attention Button is implemented for this slot.										

BXXD00F2x070 (NBIFSWDSCFG::SLOT_CNTL)

Read-write.

The Slot Control register controls slot specific parameters.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x070;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000070; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description										
15	Reserved.										
14	INBAND_PD_DISABLE . Read-write. Reset: Fixed,0. 0=Enable. 1=Disable. If In-band Presence Detect Disable Capability is supported, controls the Port's ability to use in-band presence to determine Presence Detect State and Component Presence.										
13	AUTO_SLOT_PWR_LIMIT_DISABLE . Read-write. Reset: Fixed,0. 0=Enable. 1=Disable. (Downstream Ports only) Controls the Port's ability of automatically sending a Set Slot Power Limit Message when a Link transitions from non-DL_Up to DL_Up status.										
12	DL_STATE_CHANGED_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. If Data Link Layer Link Active Capability is supported, controls if the function generates software notification when Data Link Layer Link Active Reporting bit is changed.										
11	ELECTROMECH_INTERLOCK_CNTL . Read-write. Reset: Fixed,0. If Electromechanical Interlock is supported, writes of 1 causes the state of the Electromechanical Interlock to toggle. Writes of 0 have no effect. Reads always return 0.										
10	PWR_CONTROLLER_CNTL . Read-write. Reset: Fixed,0. 0=Power On. 1=Power Off. If Power Controller is supported, writes set the power state of the slot to the written state. Read returns the last written value.										
9:8	PWR_INDICATOR_CNTL . Read-write. Reset: Fixed,0h. If Power Indicator is supported, writes set the Power Indicator to the written state. Reads return the last written value.										
	ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Reserved.</td></tr> <tr> <td>1h</td><td>On</td></tr> <tr> <td>2h</td><td>Blink</td></tr> <tr> <td>3h</td><td>Off</td></tr> </table>	Value	Description	0h	Reserved.	1h	On	2h	Blink	3h	Off
Value	Description										
0h	Reserved.										
1h	On										
2h	Blink										
3h	Off										
7:6	ATTN_INDICATOR_CNTL . Read-write. Reset: Fixed,0h. If Attention Indicator is supported, writes set the Attention Indicator to the written state. Reads return the last written value.										
	ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Reserved.</td></tr> <tr> <td>1h</td><td>On</td></tr> <tr> <td>2h</td><td>Blink</td></tr> <tr> <td>3h</td><td>Off</td></tr> </table>	Value	Description	0h	Reserved.	1h	On	2h	Blink	3h	Off
Value	Description										
0h	Reserved.										
1h	On										
2h	Blink										
3h	Off										
5	HOTPLUG_INTR_EN . Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Hot-Plug Capability is supported, controls if the function generates an interrupt on enabled Hot-Plug events.										
4	COMMAND_COMPLETED_INTR_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. If Command Completed notification is supported, controls if the function generates software notification when a command is completed by the Hot-Plug Controller.										
3	PRESENCE_DETECT_CHANGED_EN . Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Hot-Plug Capability is supported, controls if the function generates software notification on a presence detect changed event.										
2	MRL_SENSOR_CHANGED_EN . Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If MRL Sensor is supported, controls if the function generates software notification on a MRL sensor changed event.										
1	PWR_FAULT_DETECTED_EN . Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Power Fault Detection is supported, controls if the function generates software notification on a power fault event.										

0	ATTN_BUTTON_PRESSED_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. If Attention Button is supported, controls if the function generates software notification on an attention button pressed event.
---	--

BXXD00F2x072 (NBIFSWDSCFG::SLOT_STATUS)

The Slot Status register provides information about slot specific parameters.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x072;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000072; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:9	Reserved.
8	DL_STATE_CHANGED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. If Data Link Layer Link Active Capability is supported, indicates if the value reported in the Data Link Layer Link Active bit of the Link Status register is changed.
7	ELECTROMECH_INTERLOCK_STATUS. Read-write. Reset: Fixed,0. 0=Electromechanical Interlock Disengaged. 1=Electromechanical Interlock Engaged. If Electromechanical Interlock is supported, indicates the status of the Electromechanical Interlock.
6	PRESENCE_DETECT_STATE. Read-write. Reset: Fixed,1. 0=Adapter not Present. 1=Adapter Present. When the optionally supported SFI PD State Mask bit is clear, indicates the presence of an adapter in the slot, based on all enabled presence detect mechanisms.
5	MRL_SENSOR_STATE. Read-write. Reset: Fixed,0. 0=MRL Closed. 1=MRL Open. If MRL Sensor is supported, indicates the status of the MRL sensor.
4	COMMAND_COMPLETED. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. If Command Completed notification is supported, indicates if the Hot-Plug Controller completes an issued command.
3	PRESENCE_DETECT_CHANGED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If Hot-Plug Capability is supported, indicates if the value reported in the Presence Detect State bit is changed.
2	MRL_SENSOR_CHANGED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If MRL Sensor is supported, indicates if a MRL sensor state change is detected.
1	PWR_FAULT_DETECTED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If Power Fault Detection is supported, indicates if the power controller detected a power fault at this slot.
0	ATTN_BUTTON_PRESSED. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. If Attention Button is supported, indicates if the attention button is pressed.

BXXD00F2x07C (NBIFSWDSCFG::DEVICE_CAP2)

Read-only.

The Device Capabilities 2 register identifies device specific capabilities.

Bits	Description										
31	FRS_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function supports Function Readiness Status capability.										
30:27	Reserved.										
26	EMER_POWER_REDUCTION_INIT_REQ. Read-only. Reset: Fixed,0. 0=Initialization not Required. 1=Initialization Required. Description: (Upstream Ports only) Indicates if the function requires software initialization upon exiting the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.										
25:24	EMER_POWER_REDUCTION_SUPPORTED. Read-only. Reset: Fixed,0h. Description: (Upstream Ports only) Indicates if the function supports the Emergency Power Reduction mechanism. For Downstream Ports, this bit is Reserved. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Not Supported</td></tr> <tr> <td>1h</td><td>Supported using Device Specific mechanism</td></tr> <tr> <td>2h</td><td>Supported using Form Factor or Device Specific mechanisms</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	Not Supported	1h	Supported using Device Specific mechanism	2h	Supported using Form Factor or Device Specific mechanisms	3h	Reserved.
Value	Description										
0h	Not Supported										
1h	Supported using Device Specific mechanism										
2h	Supported using Form Factor or Device Specific mechanisms										
3h	Reserved.										
23:22	MAX_END_END_TLP_PREFIXES. Read-only. Reset: 0h. Indicates the maximum number of End-End TLP Prefixes supported by a function with End-End TLP Prefix Supported set. If End-End TLP Prefix Supported bit is not set, this field is Reserved. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>4 E-E TLP Prefixes Supported</td></tr> <tr> <td>1h</td><td>1 E-E TLP Prefix Supported</td></tr> <tr> <td>2h</td><td>2 E-E TLP Prefixes Supported</td></tr> <tr> <td>3h</td><td>3 E-E TLP Prefixes Supported</td></tr> </table>	Value	Description	0h	4 E-E TLP Prefixes Supported	1h	1 E-E TLP Prefix Supported	2h	2 E-E TLP Prefixes Supported	3h	3 E-E TLP Prefixes Supported
Value	Description										
0h	4 E-E TLP Prefixes Supported										
1h	1 E-E TLP Prefix Supported										
2h	2 E-E TLP Prefixes Supported										
3h	3 E-E TLP Prefixes Supported										
21	END_END_TLP_PREFIX_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports receiving End-End TLP Prefixes.										
20	EXTENDED_FMT_FIELD_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the 3-bit definition of the Fmt field. When not set, the function supports only the 2-bit definition of the Fmt field.										
19:18	OBFF_SUPPORTED. Read-only. Reset: 0h. Indicates if the function supports Optimized Buffer Flush/Fill signaling. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>OBFF not Supported</td></tr> <tr> <td>1h</td><td>OBFF using Message Supported</td></tr> <tr> <td>2h</td><td>OBFF using WAKE# Supported</td></tr> <tr> <td>3h</td><td>OBFF using WAKE# and Message Supported</td></tr> </table>	Value	Description	0h	OBFF not Supported	1h	OBFF using Message Supported	2h	OBFF using WAKE# Supported	3h	OBFF using WAKE# and Message Supported
Value	Description										
0h	OBFF not Supported										
1h	OBFF using Message Supported										
2h	OBFF using WAKE# Supported										
3h	OBFF using WAKE# and Message Supported										
17	TEN_BIT_TAG_REQUESTER_SUPPORTED. Read-only. Reset: 0. 0=Use Extended Tag Field Supported. 1=10-Bit Tag Supported. Indicates the maximum supported size of the Tag field as a Requester.										

16	TEN_BIT_TAG_COMPLETER_SUPPORTED. Read-only. Reset: 1. 0=8-Bit Tag Supported. 1=10-Bit Tag Supported. Indicates the maximum supported size of the Tag field as a Completer.										
15:14	LN_SYSTEM_CLS. Read-only. Reset: Fixed,0h. For Root Ports, indicates if the Root Port supports LN protocol as an LN Completer. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>LN Completer not Supported</td></tr> <tr> <td>1h</td><td>LN Completer with 64 byte cachelines</td></tr> <tr> <td>2h</td><td>LN Completer with 128 byte cachelines</td></tr> <tr> <td>3h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	LN Completer not Supported	1h	LN Completer with 64 byte cachelines	2h	LN Completer with 128 byte cachelines	3h	Reserved.
Value	Description										
0h	LN Completer not Supported										
1h	LN Completer with 64 byte cachelines										
2h	LN Completer with 128 byte cachelines										
3h	Reserved.										
13:12	TPH_CPLR_SUPPORTED. Read-only. Reset: Fixed,0h. For Root Ports and Endpoints, indicates if the Completer supports TPH or Extended TPH. For all other functions, this field is Reserved. ValidValues: <table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>TPH and Extended TPH Completer not Supported</td></tr> <tr> <td>1h</td><td>TPH Completer Supported and Extended TPH Completer not Supported</td></tr> <tr> <td>2h</td><td>Reserved.</td></tr> <tr> <td>3h</td><td>TPH and Extended TPH Completer Supported</td></tr> </table>	Value	Description	0h	TPH and Extended TPH Completer not Supported	1h	TPH Completer Supported and Extended TPH Completer not Supported	2h	Reserved.	3h	TPH and Extended TPH Completer Supported
Value	Description										
0h	TPH and Extended TPH Completer not Supported										
1h	TPH Completer Supported and Extended TPH Completer not Supported										
2h	Reserved.										
3h	TPH and Extended TPH Completer Supported										
11	LTR_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function supports the Latency Tolerance Reporting mechanism.										
10	NO_RO_ENABLED_P2P_PASSING. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a routing element supports never allowing posted requests with Relaxed Ordering attribute bit set, to pass each other. For Endpoints, this bit is Reserved.										
9	CAS128_CMPLT_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 128-bit AtomicOp completer.										
8	ATOMICOP_64CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 64-bit AtomicOp completer.										
7	ATOMICOP_32CMPLT_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if a function supports being a 32-bit AtomicOp completer.										
6	ATOMICOP_ROUTING_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports or Switch Upstream Ports only) Indicates if a Port supports AtomicOp routing. For Endpoints, this bit is Reserved.										
5	ARI_FORWARDING_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if a Port supports ARI forwarding. For Upstream Ports, this bit is Reserved.										
4	CPL_TIMEOUT_DIS_SUPPORTED. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if a Requester supports the Completion Timeout disable mechanism. For functions that don't issue requests, this field is Reserved.										
3:0	CPL_TIMEOUT_RANGE_SUPPORTED. Read-only. Reset: Fixed,0h. Indicates if a Requester supports the Completion Timeout programmability mechanism. For functions that don't issue requests, this field is Reserved.										

	ValidValues:	
	Value	Description
	0h	Fixed
	1h	Range A Supported
	2h	Range B Supported
	3h	Ranges A & B Supported
	5h-4h	Reserved.
	6h	Ranges B & C Supported
	7h	Ranges A & B & C Supported
	Dh-8h	Reserved.
	Eh	Ranges B & C & D Supported
	Fh	Ranges A & B & C & D Supported

BXXD00F2x080 (NBIFSWDSCFG::DEVICE_CNTL2)

Bits	Description										
15	END_END_TLP_PREFIX_BLOCKING. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports or Switch Upstream Ports only) Controls the ability of a Port to block TLPs containing End-End TLP Prefixes that target going out of this Egress Port.										
14:13	OBFF_EN. Read-write. Reset: 0h. Controls if the function is permitted to use Optimized Buffer Flush/Fill signaling. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>Disable</td></tr> <tr> <td>1h</td><td>Enable OBFF Message A</td></tr> <tr> <td>2h</td><td>Enable OBFF Message B</td></tr> <tr> <td>3h</td><td>Enable OBFF WAKE#</td></tr> </table>	Value	Description	0h	Disable	1h	Enable OBFF Message A	2h	Enable OBFF Message B	3h	Enable OBFF WAKE#
Value	Description										
0h	Disable										
1h	Enable OBFF Message A										
2h	Enable OBFF Message B										
3h	Enable OBFF WAKE#										
12	TEN_BIT_TAG_REQUESTER_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if a function is permitted to use a 10-bit Tag field as a Requester. When disabled the function uses the setting in the Extended Tag Field Enable bit.										
11	EMER_POWER_REDUCTION_REQUEST. Read-write. Reset: Fixed,0. 0=Normal Operation. 1=Enter Emergency Power Reduction state. Description: (Upstream Ports only) Triggers the function to enter the Emergency Power Reduction state. For Downstream Ports, this bit is Reserved.										
10	LTR_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the Port is permitted to use the Latency Tolerance Reporting mechanism.										
9	IDO_COMPLETION_ENABLE. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of completions it returns.										
8	IDO_REQUEST_ENABLE. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the function is permitted to set the IDO bit in the Attributes field of requests it initiates.										
7	ATOMICOP_EGRESS_BLOCKING. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Downstream Ports or Switch Upstream Ports only) Controls the ability of a Port to block AtomicOps that target going out of this Egress Port. For Endpoints, this bit is Reserved.										
6	ATOMICOP_REQUEST_EN. Read-write. Reset: Fixed,0. 0=Disable. 1=Enable. Controls the ability of a function to initiate AtomicOp requests.										
5	ARI_FORWARDING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Description: (Downstream Ports only) Controls the ability of a Port to allow Configuration requests for Device Numbers greater than 0, when converting from a Type 1 Configuration cycle to a Type 0 Configuration cycle. For Upstream Ports, this bit is Reserved.										
4	CPL_TIMEOUT_DIS. Read-write. Reset: Fixed,0. 0=Enable. 1=Disable. Controls the ability of a function to use the completion timeout mechanism.										
3:0	CPL_TIMEOUT_VALUE. Read-write. Reset: Fixed,0h. Controls the completion timeout value for the function.

Fh-Bh	Reserved.																										
11	COMPLIANCE_SOS. Read-write. Reset: 0. 0=Disable. 1=Enable. At 5.0 GT/s or lower only, controls if the Port's transmitter inserts SKP ordered sets when sending either compliance pattern. This bit is sticky.																										
10	ENTER_MOD_COMPLIANCE. Read-write. Reset: 0. 0=Compliance Pattern. 1=Modified Compliance Pattern. Controls which compliance pattern the Port transmits, when Enter Compliance bit is used to enter compliance mode. This bit is sticky.																										
9:7	XMIT_MARGIN. Read-write. Reset: 0h. Controls the value of the non-deemphasized voltage level at the Port's transmitter pins. This field is sticky.																										
6	SELECTABLE_DEEMPHASIS. Read-only. Reset: 1. 0=-6.0 dB. 1=-3.5 dB. (Downstream Ports only) At 5.0 GT/s only, controls the Port's transmitter de-emphasis level.																										
5	HW_AUTONOMOUS_SPEED_DISABLE. Read-write. Reset: 0. 0=Enable. 1=Disable. Controls the Port's ability to autonomously direct changes in link speed. This bit is sticky.																										
4	ENTER_COMPLIANCE. Read-write. Reset: 0. 0=Normal Operation. 1=Enter Compliance. Forces a Port to enter compliance mode, when it receives a hot reset. This bit is sticky, but for Upstream Ports only is cleared if the link state goes to Detect.																										
3:0	TARGET_LINK_SPEED. Read-write. Reset: 5h. (Downstream Ports only) Controls the upper limit on the Link operational speed by restricting the data rate values advertised by the upstream component. When using Enter Compliance bit, this field controls the Port's target compliance mode speed. This field is sticky.																										

	ValidValues:	
	Value	Description
	0h	Reserved.
	1h	2.5 GT/s
	2h	5.0 GT/s
	3h	8.0 GT/s
	4h	16.0 GT/s
	5h	32.0 GT/s
	Fh-6h	Reserved.

Message Data register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x0AC_msi64bit1;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS];

DataPortCheck=NBIFSWDSCFG::MSI_MSG_CNTL[MSI_64BIT]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx000000AC_msi64bit1; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h;

DataPortCheck=NBIFSWDSCFG::MSI_MSG_CNTL[MSI_64BIT]

Bits	Description
------	-------------

15:0	MSI_DATA_64 . Read-write. Reset: 0000h. Lower 16 bits for Message Data.
------	--

BXXD00F2x0AE_msi64bit1 (NBIFSWDSCFG::MSI_EXT_MSG_DATA_64)

Read-write. Reset: 0000h.

Extended Message Data register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x0AE_msi64bit1;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS];

DataPortCheck=NBIFSWDSCFG::MSI_MSG_CNTL[MSI_64BIT]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx000000AE_msi64bit1; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h;

DataPortCheck=NBIFSWDSCFG::MSI_MSG_CNTL[MSI_64BIT]

Bits	Description
------	-------------

15:0	MSI_EXT_DATA_64 . Read-write. Reset: 0000h. Upper 16 bits for Message Data.
------	--

BXXD00F2x0C0 (NBIFSWDSCFG::SSID_CAP_LIST)

Read-only.

Subsystem ID Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x0C0;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx000000C0; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:8	NEXT_PTR. Read-only. Pointer to the next item in the capabilities list, or 00h if no other items exist.
7:0	CAP_ID. Read-only. Reset: Fixed,0Dh. A PCI-SIG defined ID number that indicates the nature and format of the capability.

BXXD00F2x0C4 (NBIFSWDSCFG::SSID_CAP)

Read-only. Reset: 14C4_1002h.

Subsystem ID Capability register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x0C4;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx000000C4; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:16	SUBSYSTEM_ID. Read-only. Reset: 14C4h. Subsystem ID. Specified by the vendor.
15:0	SUBSYSTEM_VENDOR_ID. Read-only. Reset: 1002h. Subsystem Vendor ID. Specified by the vendor.

BXXD00F2x100 (NBIFSWDSCFG::PCIE_VENDOR_SPECIFIC_ENH_CAP_LIST)

Read-only.

Vendor-Specific Extended Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x100;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000100; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 110h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,000Bh. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x104 (NBIFSWDSCFG::PCIE_VENDOR_SPECIFIC_HDR)

Read-only. Reset: Fixed,0101_0001h.

Vendor Specific Header register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x104;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000104; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:20	VSEC_LENGTH. Read-only. Reset: Fixed,010h. Number of bytes in the entire VSEC structure.
19:16	VSEC_REV. Read-only. Reset: Fixed,1h. Vendor-defined revision number.
15:0	VSEC_ID. Read-only. Reset: Fixed,0001h. Vendor-defined ID number.

BXXD00F2x108 (NBIFSWDSCFG::PCIE_VENDOR_SPECIFIC1)

Read-write. Reset: 0000_0000h.

Vendor-Specific Scratch register 1.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x108;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000108; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	SCRATCH. Read-write. Reset: 0000_0000h. PCIe scratch register.

BXXD00F2x10C (NBIFSWDSCFG::PCIE_VENDOR_SPECIFIC2)

Read-write. Reset: 0000_0000h.

Vendor-Specific Scratch register 2.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x10C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000010C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	SCRATCH. Read-write. Reset: 0000_0000h. PCIe scratch register.

BXXD00F2x110 (NBIFSWDSCFG::PCIE_VC_ENH_CAP_LIST)

Read-only.

Virtual Channel Extended Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x110;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000110; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 140h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0002h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x114 (NBIFSWDSCFG::PCIE_PORT_VC_CAP_REG1)

Read-only.

Port VC Capability register 1.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x114;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000114; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description										
31:12	Reserved.										
11:10	PORT_ARB_TABLE_ENTRY_SIZE. Read-only. Reset: Fixed,0h. Indicates the size (in bits) of Port Arbitration table entry in the device, or must be 0 if Port Arbitration table is not supported. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>1 bit</td></tr> <tr> <td>1h</td><td>2 bits</td></tr> <tr> <td>2h</td><td>4 bits</td></tr> <tr> <td>3h</td><td>8 bits</td></tr> </table>	Value	Description	0h	1 bit	1h	2 bits	2h	4 bits	3h	8 bits
Value	Description										
0h	1 bit										
1h	2 bits										
2h	4 bits										
3h	8 bits										
9:8	REF_CLK. Read-only. Reset: Fixed,0h. Indicates the reference clock for Virtual Channels that support time-based WRR Port Arbitration, otherwise it must be 0. ValidValues:										
	<table> <tr> <th>Value</th><th>Description</th></tr> <tr> <td>0h</td><td>100 ns</td></tr> <tr> <td>3h-1h</td><td>Reserved.</td></tr> </table>	Value	Description	0h	100 ns	3h-1h	Reserved.				
Value	Description										
0h	100 ns										
3h-1h	Reserved.										
7	Reserved.										
6:4	LOW_PRIORITY_EXT_VC_COUNT. Read-only. Reset: Fixed,0h. Indicates the number of (extended) Virtual Channels in addition to the default VC belonging to the Low Priority Virtual Channel group.										
3	Reserved.										
2:0	EXT_VC_COUNT. Read-only. Reset: 0h. Indicates the number of (extended) Virtual Channels in addition to the default VC supported by the device.										

BXXD00F2x118 (NBIFSWDSCFG::PCIE_PORT_VC_CAP_REG2)

Read-only. Reset: Fixed,0000_0000h.

Port VC Capability register 2.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x118;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000118; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:24	VC_ARB_TABLE_OFFSET. Read-only. Reset: Fixed,00h. Indicates the location of the VC Arbitration Table, or must be 0 if the VC Arbitration Table is not present.
23:8	Reserved.
7:0	VC_ARB_CAP. Read-only. Reset: Fixed,00h. Indicates the types of VC Arbitration supported by the device for the Low Priority Virtual Channel group, or must be 0 if the Low Priority Virtual Channel group contains only VC0. Bit 0 = Fixed; Bit 1 = WRR-32; Bit 2 = WRR-64; Bit 3 = WRR-128.

BXXD00F2x11C (NBIFSWDSCFG::PCIE_PORT_VC_CNTL)

Port VC Control register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x11C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000011C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:4	Reserved.
3:1	VC_ARB_SELECT. Read-write. Reset: 0h. Configures the VC Arbitration by selecting one of the supported VC Arbitration schemes.
0	LOAD_VC_ARB_TABLE. Read-only. Reset: Fixed,0. Updates the VC Arbitration logic from the VC Arbitration Table (if present), when written with 1. Reads always return 0.

BXXD00F2x11E (NBIFSWDSCFG::PCIE_PORT_VC_STATUS)

Read-only. Reset: Fixed,0000h.

Port VC Status register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x11E;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000011E; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:1	Reserved.
0	VC_ARB_TABLE_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the contents of the VC Arbitration Table are coherent, or must be 0 if the VC Arbitration Table is not present.

BXXD00F2x120 (NBIFSWDSCFG::PCIE_VC0_RESOURCE_CAP)

Read-only. Reset: Fixed,0000_0001h.

VC0 Resource Capability register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x120;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000120; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:24	PORT_ARB_TABLE_OFFSET. Read-only. Reset: Fixed,00h. Indicates the location of the Port Arbitration Table associated with the VC resource, or must be 0 if the Port Arbitration Table is not present.
23	Reserved.
22:16	MAX_TIME_SLOTS. Read-only. Reset: Fixed,00h. Indicates the maximum number of time slots (minus one) that the VC resource is capable of supporting, when configured for Timed WRR Port Arbitration.
15	REJECT_SNOOP_TRANS. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the Virtual Channel is permitted to reject transactions for which the No Snoop Attribute is applicable, but is not set.
14:8	Reserved.
7:0	PORT_ARB_CAP. Read-only. Reset: Fixed,01h. Indicates the types of Port Arbitration supported by the VC resource. Bit 0 = Fixed; Bit 1 = WRR-32; Bit 2 = WRR-64; Bit 3 = WRR-128; Bit 4 = Timed WRR-128; Bit 5 = WRR-256.

BXXD00F2x124 (NBIFSWDSCFG::PCIE_VC0_RESOURCE_CNTL)

VC0 Resource Control register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x124;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000124; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31	VC_ENABLE. Read-only. Reset: Fixed,1. 0=Disable. 1=Enable. Controls the enabling of a Virtual Channel.
30:27	Reserved.
26:24	VC_ID. Read-only. Reset: Fixed,0h. Assigns a VC ID to the VC resource.
23:20	Reserved.
19:17	PORT_ARB_SELECT. Read-write. Reset: 0h. Configures the Port Arbitration for the VC resource by selecting one of the supported Port Arbitration schemes.
16	LOAD_PORT_ARB_TABLE. Read-only. Reset: Fixed,0. Updates the Port Arbitration logic from the Port Arbitration Table (if present) for the VC resource, when written with 1. Reads always return 0.
15:8	Reserved.
7:1	TC_VC_MAP_TC1_7. Read-write. Reset: 7Fh. Indicates the TCs that are mapped to the VC resource.
0	TC_VC_MAP_TC0. Read-only. Reset: Fixed,1. Indicates the TCs that are mapped to the VC resource.

BXXD00F2x12A (NBIFSWDSCFG::PCIE_VC0_RESOURCE_STATUS)

Read-only.

VC0 Resource Status register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x12A;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000012A; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:2	Reserved.
1	VC_NEGOTIATION_PENDING. Read-only. Reset: 0. 0=Ready. 1=Pending. Indicates whether the Virtual Channel negotiation (initialization or disabling) is in pending state.
0	PORT_ARB_TABLE_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the contents of the Port Arbitration Table associated with the VC resource are coherent, or must be 0 if the Port Arbitration Table is not present.

BXXD00F2x12C (NBIFSWDSCFG::PCIE_VC1_RESOURCE_CAP)

Read-only. Reset: Fixed,0000_0001h.

VC1 Resource Capability register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x12C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000012C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:24	PORT_ARB_TABLE_OFFSET. Read-only. Reset: Fixed,00h. Indicates the location of the Port Arbitration Table associated with the VC resource, or must be 0 if the Port Arbitration Table is not present.
23:22	Reserved.
21:16	MAX_TIME_SLOTS. Read-only. Reset: Fixed,00h. Indicates the maximum number of time slots (minus one) that the VC resource is capable of supporting, when configured for Timed WRR Port Arbitration.
15	REJECT_SNOOP_TRANS. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the Virtual Channel is permitted to reject transactions for which the No Snoop Attribute is applicable, but is not set.
14:8	Reserved.
7:0	PORT_ARB_CAP. Read-only. Reset: Fixed,01h. Indicates the types of Port Arbitration supported by the VC resource. Bit 0 = Fixed; Bit 1 = WRR-32; Bit 2 = WRR-64; Bit 3 = WRR-128; Bit 4 = Timed WRR-128; Bit 5 = WRR-256.

BXXD00F2x130 (NBIFSWDSCFG::PCIE_VC1_RESOURCE_CNTL)

VC1 Resource Control register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x130;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000130; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31	VC_ENABLE. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls the enabling of a Virtual Channel.
30:27	Reserved.
26:24	VC_ID. Read-write. Reset: 0h. Assigns a VC ID to the VC resource.
23:20	Reserved.
19:17	PORT_ARB_SELECT. Read-write. Reset: 0h. Configures the Port Arbitration for the VC resource by selecting one of the supported Port Arbitration schemes.
16	LOAD_PORT_ARB_TABLE. Read-only. Reset: Fixed,0. Updates the Port Arbitration logic from the Port Arbitration Table (if present) for the VC resource, when written with 1. Reads always return 0.
15:8	Reserved.
7:1	TC_VC_MAP_TC1_7. Read-write. Reset: 00h. Indicates the TCs that are mapped to the VC resource.
0	TC_VC_MAP_TC0. Read-only. Reset: Fixed,0. Indicates the TCs that are mapped to the VC resource.

BXXD00F2x136 (NBIFSWDSCFG::PCIE_VC1_RESOURCE_STATUS)

Read-only.

VC1 Resource Status register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x136;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000136; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:2	Reserved.
1	VC_NEGOTIATION_PENDING. Read-only. Reset: 0. 0=Ready. 1=Pending. Indicates whether the Virtual Channel negotiation (initialization or disabling) is in pending state.
0	PORT_ARB_TABLE_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the contents of the Port Arbitration Table associated with the VC resource are coherent, or must be 0 if the Port Arbitration Table is not present.

BXXD00F2x140 (NBIFSWDSCFG::PCIE_DEV_SERIAL_NUM_ENH_CAP_LIST)

Read-only.

Device Serial Number Extended Capability header.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x140;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000140; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 150h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0003h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x144 (NBIFSWDSCFG::PCIE_DEV_SERIAL_NUM_DW1)

Read-only. Reset: 0000_0001h.

PCI-Express Device Serial Number (1st [DW](#)) register.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x144;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000144; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:0	SERIAL_NUMBER_LO. Read-only. Reset: 0000_0001h. Lower 32-bits of IEEE defined 64-bit extended unique identifier. (EUI-64).

BXXD00F2x148 (NBIFSWDSCFG::PCIE_DEV_SERIAL_NUM_DW2)

Read-only. Reset: 000C_8700h.

PCI-Express Device Serial Number (2nd [DW](#)) register.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x148;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000148; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:0	SERIAL_NUMBER_HI. Read-only. Reset: 000C_8700h. Upper 32-bits of IEEE defined 64-bit extended unique identifier. (EUI-64).

BXXD00F2x150 (NBIFSWDSCFG::PCIE_ADV_ERR_RPT_ENH_CAP_LIST)

Read-only.

Advanced Error Reporting Extended Capability header.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x150;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000150; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 200h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: 2h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0001h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x154 (NBIFSWDSCFG::PCIE_UNCORR_ERR_STATUS)

The Uncorrectable Error Status register reports error status of individual uncorrectable errors in a function.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x154;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000154; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:27	Reserved.
26	POISONED_TLP_EGRESS_BLOCKED_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Poisoned TLP Egress Blocked Error.
25	TLP_PREFIX_BLOCKED_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a TLP Prefix Blocked Error. This bit is sticky.
24	ATOMICOP_EGRESS_BLOCKED_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an AtomicOp Egress Blocked Error. This bit is sticky.
23	MC_BLOCKED_TLP_STATUS. Read-write. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a MC Blocked TLP. This bit is sticky.
22	UNCORR_INT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an ECRC Error. This bit is sticky.
18	MAL_TLP_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Receiver Overflow Error.
16	UNEXP_CPL_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Completion Timeout Error. This bit is sticky.
13	FC_ERR_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Flow Control Protocol Error.
12	PSN_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Poisoned TLP Received Error. This bit is sticky.
11:6	Reserved.
5	SURPDN_ERR_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. (Downstream Ports only) Indicates if the function detects a Surprise Down Error.
4	DLP_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD00F2x158 (NBIFSWDSCFG::PCIE_UNCORR_ERR_MASK)

The Uncorrectable Error Mask register controls reporting of individual uncorrectable errors by a function.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x158;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

Bits	Description
31:27	Reserved.
26	POISONED_TLP_EGRESS_BLOCKED_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a Poisoned TLP Egress Blocked Error.
25	TLP_PREFIX_BLOCKED_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a TLP Prefix Blocked Error. This bit is sticky.
24	ATOMICOP_EGRESS_BLOCKED_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an AtomicOp Egress Blocked Error. This bit is sticky.
23	MC_BLOCKED_TLP_MASK. Read-write. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a MC Blocked TLP Error. This bit is sticky.
22	UNCORR_INT_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an ECRC Error. This bit is sticky.
18	MAL_TLP_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a Receiver Overflow Error.
16	UNEXP_CPL_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Completion Timeout Error. This bit is sticky.
13	FC_ERR_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a Flow Control Protocol Error.
12	PSN_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Poisoned TLP Mask.
11:6	Reserved.
5	SURPDN_ERR_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. (Downstream Ports only) Controls if the function can report a Surprise Down Error.
4	DLP_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD00F2x15C (NBIFSWDSCFG::PCIE_UNCORR_ERR_SEVERITY)

The Uncorrectable Error Severity register controls whether an individual uncorrectable error is reported by a function as a Non-fatal or Fatal error.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x15C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000015C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:27	Reserved.
26	POISONED_TLP_EGRESS_BLOCKED_SEVERITY . Read-only. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Poisoned TLP Egress Blocked Error.
25	TLP_PREFIX_BLOCKED_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a TLP Prefix Blocked Error. This bit is sticky.
24	ATOMICOP_EGRESS_BLOCKED_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an AtomicOp Egress Blocked Error. This bit is sticky.
23	MC_BLOCKED_TLP_SEVERITY . Read-write. Reset: Fixed,0. 0=Non-fatal. 1=Fatal. Controls how the function reports a MC Blocked TLP Error. This bit is sticky.
22	UNCORR_INT_ERR_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports an Uncorrectable Internal Error. This bit is sticky.
21	ACS_VIOLATION_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an ACS Violation Error. This bit is sticky.
20	UNSUPP_REQ_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an Unsupported Request Error. This bit is sticky.
19	ECRC_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an ECRC Error. This bit is sticky.
18	MAL_TLP_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Malformed TLP Error. This bit is sticky.
17	RCV_OVFL_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Receiver Overflow Error.
16	UNEXP_CPL_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports an Unexpected Completion Error. This bit is sticky.
15	CPL_ABORT_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Completer Abort Error. This bit is sticky.
14	CPL_TIMEOUT_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Completion Timeout Error. This bit is sticky.
13	FC_ERR_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Flow Control Protocol Error.
12	PSN_ERR_SEVERITY . Read-write. Reset: 0. 0=Non-fatal. 1=Fatal. Controls how the function reports a Poisoned TLP Received Error. This bit is sticky.
11:6	Reserved.
5	SURPDN_ERR_SEVERITY . Read-only. Reset: Fixed,1. 0=Non-fatal. 1=Fatal. (Downstream Ports only) Controls how the function reports a Surprise Down Error.
4	DLP_ERR_SEVERITY . Read-write. Reset: 1. 0=Non-fatal. 1=Fatal. Controls how the function reports a Data Link Protocol Error. This bit is sticky.
3:0	Reserved.

BXXD00F2x160 (NBIFSWDSCFG::PCIE_CORR_ERR_STATUS)

The Correctable Error Status register reports error status of individual correctable errors in a function.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x160;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000160; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:16	Reserved.
15	HDR_LOG_OVFL_STATUS. Read-only. Reset: Fixed,0. 0=Not Detected. 1=Detected. Indicates if the function detects a Header Log Overflow Error.
14	CORR_INT_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Corrected Internal Error. This bit is sticky.
13	ADVISORY_NONFATAL_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects an Advisory Non-Fatal Error. This bit is sticky.
12	REPLAY_TIMER_TIMEOUT_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Replay Timer Timeout Error. This bit is sticky.
11:9	Reserved.
8	REPLAY_NUM_ROLLOVER_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a REPLAY_NUM Rollover Error. This bit is sticky.
7	BAD_DLLP_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Bad DLLP Error. This bit is sticky.
6	BAD_TLP_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Bad TLP Error. This bit is sticky.
5:1	Reserved.
0	RCV_ERR_STATUS. Read,Write-1-to-clear. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the function detects a Receiver Error. This bit is sticky.

BXXD00F2x164 (NBIFSWDSCFG::PCIE_CORR_ERR_MASK)

The Correctable Error Mask register controls reporting of individual correctable errors by a function.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x164;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000164; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:16	Reserved.
15	HDR_LOG_OVFL_MASK. Read-only. Reset: Fixed,0. 0=Unmasked. 1=Masked. Controls if the function can report a Header Log Overflow Error.
14	CORR_INT_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Corrected Internal Error. This bit is sticky.
13	ADVISORY_NONFATAL_ERR_MASK. Read-write. Reset: 1. 0=Unmasked. 1=Masked. Controls if the function can report an Advisory Non-Fatal Error. This bit is sticky.
12	REPLAY_TIMER_TIMEOUT_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Replay Timer Timeout Error. This bit is sticky.
11:9	Reserved.
8	REPLAY_NUM_ROLLOVER_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a REPLAY_NUM Rollover Error. This bit is sticky.
7	BAD_DLLP_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Bad DLLP Error. This bit is sticky.
6	BAD_TLP_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Bad TLP Error. This bit is sticky.
5:1	Reserved.
0	RCV_ERR_MASK. Read-write. Reset: 0. 0=Unmasked. 1=Masked. Controls if the function can report a Receiver Error. This bit is sticky.

BXXD00F2x168 (NBIFSWDSCFG::PCIE_ADV_ERR_CAP_CNTL)

Advanced Error Capabilities and Control register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x168;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000168; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:13	Reserved.
12	COMPLETION_TIMEOUT_LOG_CAPABLE . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording the TLP Prefix (if any) and the Header for the TLP corresponding to a detected Completion Timeout error.
11	TLP_PREFIX_LOG_PRESENT . Read-only. Reset: 0. 0=Not Detected. 1=Detected. When the First Error Pointer is valid, indicates that the TLP Prefix Log register contains valid information. This bit is sticky. If End-End TLP Prefix Supported bit is not set, this bit is Reserved.
10	MULTI_HDR_RECD_EN . Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. Controls if the function is permitted to record more than one error header.
9	MULTI_HDR_RECD_CAP . Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates if the function is capable of recording more than one error header.
8	ECRC_CHECK_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function checks ECRC. This bit is sticky.
7	ECRC_CHECK_CAP . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of checking ECRC.
6	ECRC_GEN_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the function generates ECRC. This bit is sticky.
5	ECRC_GEN_CAP . Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if the function is capable of generating ECRC.
4:0	FIRST_ERR_PTR . Read-only. Reset: 00h. Indicates the bit position of the first error reported in the Uncorrectable Error Status register. This field is only valid if the indicated bit is also set. This field is sticky.

BXXD00F2x16C (NBIFSWDSCFG::PCIE_HDR_LOG0)

Read-only. Reset: 0000_0000h.

Header Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x16C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000016C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_HDR . Read-only. Reset: 0000_0000h. TLP Header 1st DW captures the first DW of the Header for the TLP corresponding to a detected error. This field is sticky.

BXXD00F2x170 (NBIFSWDSCFG::PCIE_HDR_LOG1)

Read-only. Reset: 0000_0000h.

Header Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x170;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000170; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_HDR . Read-only. Reset: 0000_0000h. TLP Header 2nd DW captures the second DW of the Header for the TLP corresponding to a detected error. This field is sticky.

BXXD00F2x174 (NBIFSWDSCFG::PCIE_HDR_LOG2)

Read-only. Reset: 0000_0000h.

Header Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x174;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000174; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_HDR. Read-only. Reset: 0000_0000h. TLP Header 3rd DW captures the third DW of the Header for the TLP corresponding to a detected error. This field is sticky.

BXXD00F2x178 (NBIFSWDSCFG::PCIE_HDR_LOG3)

Read-only. Reset: 0000_0000h.

Header Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x178;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000178; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_HDR. Read-only. Reset: 0000_0000h. TLP Header 4th DW captures the fourth DW (if present) of the Header for the TLP corresponding to a detected error. This field is sticky.

BXXD00F2x188 (NBIFSWDSCFG::PCIE_TLP_PREFIX_LOG0)

Read-only. Reset: 0000_0000h.

TLP Prefix Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x188;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000188; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_PREFIX. Read-only. Reset: 0000_0000h. First TLP Prefix Log (if supported) captures the first End-End TLP Prefix (if present) for the TLP corresponding to the detected error. This field is sticky.

BXXD00F2x18C (NBIFSWDSCFG::PCIE_TLP_PREFIX_LOG1)

Read-only. Reset: 0000_0000h.

TLP Prefix Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x18C;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000018C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_PREFIX. Read-only. Reset: 0000_0000h. Second TLP Prefix Log (if supported) captures the second End-End TLP Prefix (if present) for the TLP corresponding to the detected error. This field is sticky.

BXXD00F2x190 (NBIFSWDSCFG::PCIE_TLP_PREFIX_LOG2)

Read-only. Reset: 0000_0000h.

TLP Prefix Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x190;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000190; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_PREFIX. Read-only. Reset: 0000_0000h. Third TLP Prefix Log (if supported) captures the third End-End TLP Prefix (if present) for the TLP corresponding to the detected error. This field is sticky.

BXXD00F2x194 (NBIFSWDSCFG::PCIE_TLP_PREFIX_LOG3)

Read-only. Reset: 0000_0000h.

TLP Prefix Log register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x194;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000194; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:0	TLP_PREFIX. Read-only. Reset: 0000_0000h. Fourth TLP Prefix Log (if supported) captures the fourth End-End TLP Prefix (if present) for the TLP corresponding to the detected error. This field is sticky.

BXXD00F2x270 (NBIFSWDSCFG::PCIE_SECONDARY_ENH_CAP_LIST)

Read-only.

Secondary PCI Express Extended Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x270;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000270; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 2A0h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0019h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x274 (NBIFSWDSCFG::PCIE_LINK_CNTL3)

Link Control 3 register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x274;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000274; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:16	Reserved.
15:9	ENABLE_LOWER_SKP_OS_GEN. Read-only. Reset: Fixed,00h. Controls if the Port overrides SRIS requirements for SKP ordered set transmission rates by transmitting SKP ordered sets at the SRNS scheduling rate when in L0, for the indicated speed(s). ValidValues: See: NBIFSWDSCFG::PCIE_LINK_CNTL3[ENABLE_LOWER_SKP_OS_GEN] Valid Values.
8:2	Reserved.
1	LINK_EQUALIZATION_REQ_INT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. (Downstream Ports only) Controls if the Downstream Port generates an interrupt to indicate that the Link Equalization Request 8.0 GT/s , or the Link Equalization Request 16.0 GT/s, or the Link Equalization Request 32.0 GT/s bits have been set.
0	PERFORM_EQUALIZATION. Read-write. Reset: 0. 0=Normal Operation. 1=Perform Equalization. (Downstream Ports only) Forces the Downstream Port to perform link equalization, when a 1 is written to Retrain Link bit with Target Link Speed field set to 8.0 GT/s or higher.

NBIFSWDSCFG::PCIE_LINK_CNTL3[ENABLE_LOWER_SKP_OS_GEN] Valid Values

Value	Description
00h	Lower SKP Generation Disabled
01h	Enabled at 2.5 GT/s
02h	Enabled at 5.0 GT/s
03h	Enabled at 2.5 to 5.0 GT/s
04h	Enabled at 8.0 GT/s
05h	Enabled at 2.5 & 8.0 GT/s
06h	Enabled at 5.0 & 8.0 GT/s

07h	Enabled at 2.5 to 8.0 GT/s
08h	Enabled at 16.0 GT/s
09h	Enabled at 2.5 & 16.0 GT/s
0Ah	Enabled at 5.0 & 16.0 GT/s
0Bh	Enabled at 2.5 & 5.0 & 16.0 GT/s
0Ch	Enabled at 8.0 to 16.0 GT/s
0Dh	Enabled at 2.5 & 8.0 & 16.0 GT/s
0Eh	Enabled at 5.0 to 16.0 GT/s
0Fh	Enabled at 2.5 to 16.0 GT/s
10h	Enabled at 32.0 GT/s
11h	Enabled at 2.5 & 32.0 GT/s
12h	Enabled at 5.0 & 32.0 GT/s
13h	Enabled at 2.5 & 5.0 & 32.0 GT/s
14h	Enabled at 8.0 & 32.0 GT/s
15h	Enabled at 2.5 & 8.0 & 32.0 GT/s
16h	Enabled at 5.0 & 8.0 & 32.0 GT/s
17h	Enabled at 2.5 & 5.0 & 8.0 & 32.0 GT/s
18h	Enabled at 16.0 to 32.0 GT/s
19h	Enabled at 2.5 & 16.0 & 32.0 GT/s
1Ah	Enabled at 5.0 & 16.0 & 32.0 GT/s
1Bh	Enabled at 2.5 & 5.0 & 16.0 & 32.0 GT/s
1Ch	Enabled at 8.0 to 32.0 GT/s
1Dh	Enabled at 2.5 & 8.0 & 16.0 & 32.0 GT/s
1Eh	Enabled at 5.0 to 32.0 GT/s
1Fh	Enabled at 2.5 to 32.0 GT/s
7Fh-20h	Reserved.

BXXD00F2x278 (NBIFSWDSCFG::PCIE_LANE_ERROR_STATUS)

Read, Write-1-to-clear. Reset: 0000_0000h.

Lane Error Status register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x278;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000278; NBIO[1:0]NBIF2SWDSCFG=10[7,5]j0_0000h

Bits	Description
31:16	Reserved.
15:0	LANE_ERROR_STATUS_BITS. Read, Write-1-to-clear. Reset: 0000h. Indicates if the corresponding lane detected a lane based error. This field is a bit vector that covers all supported lanes. Bit 0 corresponds to the default lane 0, and bit ordering is invariant to link width and lane reversal negotiation. This field is sticky.

BXXD00F2x2[7C...9A] (NBIFSWDSCFG::PCIE_LANE_EQUALIZATION_CNTL)

Read-only. Reset: 7F7Fh.

Lane 0 Equalization Control register.

_dev0_instNBIF2SWDS_n[15:0]_nbio0_aliasHOST; BXXD00F2x2[9A,98,96,94,92,90,8[E,C,A,8,6,4,2,0],7E,7C];

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_n[15:0]_nbio1_aliasHOST; BXXD00F2x2[9A,98,96,94,92,90,8[E,C,A,8,6,4,2,0],7E,7C];

_dev0_instNBIF2SWDS_n[15:0]_nbio0_aliasSMN; NBIO0NBIF2SWDSCFGx0000_02[9A,98,96,94,92,90,8E,8C,8A,88,86,84,82,80,7E,7C];

NBIO0NBIF2SWDSCFG=1050_0000h

_dev0_instNBIF2SWDS_n[15:0]_nbio1_aliasSMN; NBIO1NBIF2SWDSCFGx0000_02[9A,98,96,94,92,90,8E,8C,8A,88,86,84,82,80,7E,7C];

NBIO1NBIF2SWDSCFG=1070_0000h

Bits	Description
15	Reserved.
14:12	UPSTREAM_PORT_8GT_RX_PRESET_HINT. Read-only. Reset: 7h. Selects the receiver preset hint value that the Downstream Port requests the other side to optionally use for initial operation at 8.0 GT/s .
11:8	UPSTREAM_PORT_8GT_TX_PRESET. Read-only. Reset: Fh. Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 8.0 GT/s .
7	Reserved.
6:4	DOWNSTREAM_PORT_8GT_RX_PRESET_HINT. Read-only. Reset: 7h. Optionally selects the Downstream Port's receiver preset hint for initial operation at 8.0 GT/s .
3:0	DOWNSTREAM_PORT_8GT_TX_PRESET. Read-only. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 8.0 GT/s .

BXXD00F2x2A0 (NBIFSWDSCFG::PCIE_ACS_ENH_CAP_LIST)

Read-only.

ACS Extended Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x2A0;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx000002A0; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 2F0h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,000Dh. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x2A4 (NBIFSWDSCFG::PCIE_ACS_CAP)

Read-only.

ACS Capability register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x2A4;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx000002A4; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:8	EGRESS_CONTROL_VECTOR_SIZE. Read-only. Reset: Fixed,00h. When ACS P2P Egress Control bit is set, a non-zero value indicates the number of bits in the Egress Control Vector, while a value of 0 indicates 256 bits in the Egress Control Vector.
7	ENHANCED_CAPABILITY. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Enhanced Capability.
6	DIRECT_TRANSLATED_P2P. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Direct Translated P2P.
5	P2P_EGRESS_CONTROL. Read-only. Reset: Fixed,0. 0=Not Supported. 1=Supported. Indicates that the component implements ACS P2P Egress Control.
4	UPSTREAM_FORWARDING. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Upstream Forwarding.
3	P2P_COMPLETION_REDIRECT. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates that the component implements ACS P2P Completion Redirect.
2	P2P_REQUEST_REDIRECT. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates that the component implements ACS P2P Request Redirect.
1	TRANSLATION_BLOCKING. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Translation Blocking.
0	SOURCE_VALIDATION. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates that the component implements ACS Source Validation.

BXXD00F2x2A6 (NBIFSWDSCFG::PCIE_ACS_CNTL)

ACS Control register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x2A6;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx000002A6; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:13	Reserved.
12	UNCLAIMED_REQUEST_REDIRECT_CNTL. Read-write. Reset: 0. 0=Unsupported Request. 1=Forwarded upstream. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port memory aperture which is not within any of the component's Switch Downstream Port memory aperture or BAR claimed memory space.
11:10	USP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's Switch Upstream Port BAR claimed memory space.
ValidValues:	
Value	Description
0h	Request allowed
1h	Request blocked
2h	Request redirected
3h	Reserved.
9:8	DSP_MEMORY_TARGET_ACCESS_CNTL. Read-write. Reset: 0h. Controls how the component handles upstream Memory Requests that target the component's BAR claimed memory space.
ValidValues:	
Value	Description
0h	Request allowed
1h	Request blocked
2h	Request redirected
3h	Reserved.
7	IO_REQUEST_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component handles upstream I/O Requests as ACS Violations.
6	DIRECT_TRANSLATED_P2P_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component overrides the ACS P2P Request Redirect and ACS P2P Egress Control mechanisms with P2P Memory Requests whose Address Translation field indicates a Translated address.
5	P2P_EGRESS_CONTROL_EN. Read-only. Reset: Fixed,0. 0=Disable. 1=Enable. In conjunction with the Egress Control Vector plus the ACS P2P Request Redirect and ACS Direct Translated P2P mechanisms, controls when to allow, disallow, or redirect P2P Requests.
4	UPSTREAM_FORWARDING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component forwards Upstream any Request or Completion TLPs it receives that were redirected Upstream by a component lower in the hierarchy.
3	P2P_COMPLETION_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component redirects P2P Completions Upstream; applicable only to Read Completions whose Relaxed Ordering Attribute is clear.
2	P2P_REQUEST_REDIRECT_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. In conjunction with ACS P2P Egress Control and ACS Direct Translated P2P mechanisms, controls if the component redirects P2P Requests Upstream.
1	TRANSLATION_BLOCKING_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component blocks all Upstream Memory Requests whose Address Translation field is not set to the default value.
0	SOURCE_VALIDATION_EN. Read-write. Reset: 0. 0=Disable. 1=Enable. Controls if the component validates the Bus Number from the Requester ID of Upstream Requests against the secondary or subordinate Bus Numbers.

BXXD00F2x400 (NBIFSWDSCFG::PCIE_DLF_ENH_CAP_LIST)

Read-only.

Data Link Feature Extended Capability header.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x400;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000400; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 410h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0025h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x404 (NBIFSWDSCFG::DATA_LINK_FEATURE_CAP)

Read-only. Reset: Fixed,8000_0000h.

Data Link Feature Capabilities register.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x404;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000404; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31	DLF_EXCHANGE_ENABLE. Read-only. Reset: Fixed,1. 0=Bypass DL_Feature negotiation. 1=Perform DL_Feature negotiation. Indicates if the Port will perform the Data Link Feature Exchange during Data Link Layer activation.
30:23	Reserved.
22:0	LOCAL_DLF_SUPPORTED. Read-only. Reset: Fixed,00_0000h. Indicates which Data Link Features the Port supports. This field is a bit vector that covers all supported features: Bit 0 is Scaled Flow Control Supported. If Data Link Feature Exchange Enable bit is set, this field's value is sent in the Port's transmitted Data Link Feature DLLP.

BXXD00F2x408 (NBIFSWDSCFG::DATA_LINK_FEATURE_STATUS)

Read-only. Reset: 8000_0001h.

Data Link Feature Status register.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x408;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000408; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31	REMOTE_DLF_SUPPORTED_VALID. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if the Port received a Data Link Feature DLLP during DL_Feature negotiation, containing meaningful Remote Data Link Feature Supported and Remote Data Link Feature Ack fields. The bit is cleared when the Data Link Layer enters the DL_Inactive state.
30:23	Reserved.
22:0	REMOTE_DLF_SUPPORTED. Read-only. Reset: 00_0001h. Captures which Data Link Features the Remote Port supports. This field is a bit vector that covers all supported features: Bit 0 is Scaled Flow Control Supported. If Data Link Feature Exchange Enable bit is set, this field's value is from the Port's received Data Link Feature DLLP.

BXXD00F2x410 (NBIFSWDSCFG::PCIE_PHY_16GT_ENH_CAP_LIST)

Read-only.

Physical Layer 16.0 [GT/s](#) Extended Capability header.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x410;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000410; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 450h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0026h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x414 (NBIFSWDSCFG::LINK_CAP_16GT)

Read-write. Reset: Fixed,0000_0000h.

The 16.0 [GT/s](#) Capabilities register identifies Physical Layer 16.0 GT/s specific capabilities.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x414;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000414; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:0	Reserved.

BXXD00F2x418 (NBIFSWDSCFG::LINK_CNTL_16GT)

Read-write. Reset: Fixed,0000_0000h.

The 16.0 [GT/s](#) Control register controls Physical Layer 16.0 GT/s specific parameters.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x418;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000418; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:0	Reserved.

BXXD00F2x41C (NBIFSWDSCFG::LINK_STATUS_16GT)The 16.0 [GT/s](#) Status register provides information about Physical Layer 16.0 GT/s specific parameters.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x41C;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx0000041C; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:5	Reserved.
4	LINK_EQUALIZATION_REQUEST_16GT. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 16.0 GT/s link equalization to be performed. This bit is sticky.
3	EQUALIZATION_PHASE3_SUCCESS_16GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 16.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
2	EQUALIZATION_PHASE2_SUCCESS_16GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 16.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
1	EQUALIZATION_PHASE1_SUCCESS_16GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 16.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
0	EQUALIZATION_COMPLETE_16GT. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the 16.0 GT/s Transmitter Equalization procedure has completed. This bit is sticky.

BXXD00F2x420 (NBIFSWDSCFG::LOCAL_PARITY_MISMATCH_STATUS_16GT)

Read-only. Reset: Fixed,0000_0000h.

16.0 [GT/s](#) Local Data Parity Mismatch Status register.

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 4C0h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0027h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x454 (NBIFSWDSCFG::MARGINING_PORT_CAP)

Read-only. Reset: 0000h.

Margining Port Capabilities register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x454;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000454; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:1	Reserved.
0	MARGINING_USES_SOFTWARE. Read-only. Reset: 0. 0=Software not Required. 1=Software Required. Indicates if the Port requires hardware-specific software in order to support margining.

BXXD00F2x456 (NBIFSWDSCFG::MARGINING_PORT_STATUS)

Read-only. Reset: 0000h.

Margining Port Status register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x456;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000456; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
15:2	Reserved.
1	MARGINING_SOFTWARE_READY. Read-only. Reset: 0. 0=Initialization not Completed. 1=Initialization Completed. When Margining Uses Software Driver bit is set, indicates if hardware-specific software initialization of the Port has been completed.
0	MARGINING_READY. Read-only. Reset: 0. 0=Not Ready. 1=Ready. Indicates if the Port is ready to accept margining commands.

BXXD00F2x4[58...94] (NBIFSWDSCFG::MARGINING_LANE_CNTL)

Read-write. Reset: 9C38h.

Margining Lane Control register. There are 16 lanes (0 ~ 15); the lane number corresponds to "_n*" in the register instance. For example, dev*_instNBIF*_n15_* means "Lane 15 Margining Control register".

_dev0_instNBIF2SWDS_n[15:0]_nbio0_aliasHOST; BXXD00F2x4[94,90,[[8:6][C,8,4,0]],5C,58];

NBIO1NBIF2SWDSCFG=1070_0000h

Bits	Description
15:8	MARGIN_PAYLOAD. Read-write. Reset: 9Ch. When Usage Model bit is clear, controls the value sent in the Margin Payload field of transmitted Control SKP ordered sets. The field returns to its default value when the Port goes DL_Down.
7	Reserved.
6	USAGE_MODEL. Read-write. Reset: 0. 0=Lane Margining at Receiver. Controls the value sent in the Usage Model bit of transmitted Control SKP ordered sets. The field is cleared when the Port goes DL_Down.
5:3	MARGIN_TYPE. Read-write. Reset: 7h. When Usage Model bit is clear, controls the value sent in the Margin Type field of transmitted Control SKP ordered sets. The field is cleared when the Port goes DL_Down.
2:0	RECEIVER_NUMBER. Read-write. Reset: 0h. When Usage Model bit is clear, controls the value sent in the Receiver Number field of transmitted Control SKP ordered sets. The field is cleared when the Port goes DL_Down.

BXXD00F2x4[5A...96] (NBIFSWDSCFG::MARGINING_LANE_STATUS)

Read-only. Reset: 0000h.

Margining Lane Status register. There are 16 lanes (0 ~ 15); the lane number corresponds to "_n*" in the register instance. For example, dev*_instNBIF*_n15_* means "Lane 15 Margining Status register".

_dev0_instNBIF2SWDS_n[15:0]_nbio0_aliasHOST; BXXD00F2x4[96,92,[[8:6][E,A,6,2]],5E,5A];

NBIO1NBIF2SWDSCFG=1070_0000h

Bits	Description
15:8	MARGIN_PAYLOAD_STATUS. Read-only. Reset: 00h. Captures the value from the Margin Payload field of received Control SKP ordered sets that have the Usage Model bit clear. The field is cleared when the Port goes DL_Down.
7	Reserved.
6	USAGE_MODEL_STATUS. Read-only. Reset: 0. 0=Lane Margining at Receiver. Captures the value from the Usage Model bit of received Control SKP ordered sets. The field is cleared when the Port goes DL_Down.
5:3	MARGIN_TYPE_STATUS. Read-only. Reset: 0h. Captures the value from the Margin Type field of received Control SKP ordered sets that have the Usage Model bit clear. The field is cleared when the Port goes DL_Down.
2:0	RECEIVER_NUMBER_STATUS. Read-only. Reset: 0h. Captures the value from the Receiver Number field of received Control SKP ordered sets that have the Usage Model bit clear. The field is cleared when the Port goes DL_Down.

BXXD00F2x500 (NBIFSWDSCFG::PCIE_PHY_32GT_ENH_CAP_LIST)

Read-only.

Physical Layer 32.0 [GT/s](#) Extended Capability header.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x500;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000500; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 530h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,002Ah. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x504 (NBIFSWDSCFG::LINK_CAP_32GT)

Read-only.

The 32.0 [GT/s](#) Capabilities register identifies Physical Layer 32.0 GT/s specific capabilities.`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x504;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000504; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:16	Reserved.
15:11	MODIFIED_TS_RESERVED_USAGE_MODES. Read-only. Reset: Fixed,00h. Reserved.
10	MODIFIED_TS_USAGE_MODE2_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports negotiating to use alternate Training Set protocols.
9	MODIFIED_TS_USAGE_MODE1_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports sending and receiving vendor specific Training Set Messages.
8	MODIFIED_TS_USAGE_MODE0_SUPPORTED. Read-only. Reset: Fixed,1. 0=Not Supported. 1=Supported. Indicates if this port supports standard PCI Express Training Set usage mode.
7:2	Reserved.
1	NO_EQ_NEEDED_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization is needed.
0	EQ_BYPASS_TO_HIGHEST_RATE_SUPPORTED. Read-only. Reset: 1. 0=Not Supported. 1=Supported. Indicates if this port supports controlling if link equalization for link speeds other than the highest common supported link speed are bypassed.

BXXD00F2x508 (NBIFSWDSCFG::LINK_CNTL_32GT)

Read-write. Reset: 0000_0000h.

The 32.0 [GT/s](#) Control register controls Physical Layer 32.0 GT/s specific parameters.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x508;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

Bits	Description
31:11	Reserved.
10	NO_EQ_NEEDED_RECEIVED. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received, containing the No Equalization Needed bit set. Also indicates if a non-modified TS1 or non-modified TS2 was received, containing the No Equalization Needed encoding.
9	TRANSMITTER_PRECODE_REQUEST. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if the Port will request the transmitter to use Precoding by setting the Precoding Request bit in TS1s/TS2s transmitted prior to entry to Recovery.Speed.
8	TRANSMITTER_PRECODING_ON. Read-only. Reset: 0. Indicates whether the receiver asked this transmitter to enable Precoding.
7:6	RECEIVED_ENHANCED_LINK_BEHAVIOR_CNTL. Read-only. Reset: 0h. Contains the Enhanced Link Behavior Control bits from the most recent TS1 or TS2 received in the Polling or Configuration states.
5	MODIFIED_TS_RECEIVED. Read-only. Reset: 0. 0=Not Detected. 1=Detected. Indicates if a Modified TS1 or Modified TS2 was received.
4	LINK_EQUALIZATION_REQUEST_32GT. Read,Write-1-to-clear. 0=Not Detected. 1=Detected. Indicates if hardware requests 32.0 GT/s link equalization to be performed. This bit is sticky.
3	EQUALIZATION_PHASE3_SUCCESS_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 3 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
2	EQUALIZATION_PHASE2_SUCCESS_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 2 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
1	EQUALIZATION_PHASE1_SUCCESS_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if Phase 1 of the 32.0 GT/s Transmitter Equalization procedure has successfully completed. This bit is sticky.
0	EQUALIZATION_COMPLETE_32GT. Read-only. Reset: 1. 0=Not Detected. 1=Detected. Indicates if the Transmitter Equalization procedure at 32.0 GT/s has completed. This bit is sticky.

BXXD00F2x510 (NBIFSWDSCFG::RECEIVED_MODIFIED_TS_DATA1)

Read-only. Reset: 0000_0000h.

The Received Modified TS Data 1 register reports the values received in Modified TS1 or Modified TS2.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x510;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

BXXD00F2x52[0...F] (NBIFSWDSCFG::LANE_EQUALIZATION_CNTL_32GT)

Read-only. Reset: FFh.

32.0 [GT/s](#) Lane Equalization Control register. There are 16 lanes (0 ~ 15); the lane number corresponds to "_n*" in the register instance. For example, dev*_func*_instNBIF*_n15_* means "32.0 GT/s Lane 15 Equalization Control register".`_dev0_instNBIF2SWDS_n[15:0]_nbio0_aliasHOST; BXXD00F2x52[F:0];``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_n[15:0]_nbio1_aliasHOST; BXXD00F2x52[F:0];``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_n[15:0]_nbio0_aliasSMN; NBIO0NBIF2SWDSCFGx0000_052[F:0]; NBIO0NBIF2SWDSCFG=1050_0000h``_dev0_instNBIF2SWDS_n[15:0]_nbio1_aliasSMN; NBIO1NBIF2SWDSCFGx0000_052[F:0]; NBIO1NBIF2SWDSCFG=1070_0000h`

Bits	Description
7:4	LANE_USP_32GT_TX_PRESET . Read-only. Reset: Fh. Selects the transmitter preset value that the Downstream Port requests the other side to use for initial operation at 32.0 GT/s .
3:0	LANE_DSP_32GT_TX_PRESET . Read-only. Reset: Fh. Selects the Downstream Port's transmitter preset for initial operation at 32.0 GT/s .

BXXD00F2x530 (NBIFSWDSCFG::PCIE_AP_ENH_CAP_LIST)

Read-only.

Alternate Protocol Extended Capability header.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x530;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000530; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:20	NEXT_PTR . Read-only. Reset: 550h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER . Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID . Read-only. Reset: Fixed,002Bh. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x534 (NBIFSWDSCFG::AP_CAP)

Read-only. Reset: 0000_0001h.

The Alternate Protocol Capabilities register identifies Alternate Protocol specific capabilities.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x534;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000534; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:9	Reserved.
8	AP_SELECTIVE_ENABLE_SUPPORTED. Read-only. Reset: 0. 0=Not Supported. 1=Supported. Description: (Downstream Ports only) Indicates if the Port supports the Alternate Protocol Selective Enable Mask register. For Upstream Ports, this bit is Reserved.
7:0	AP_COUNT. Read-only. Reset: 01h. Indicates the number of Alternate Protocols supported by one or more lanes of the Port.

BXXD00F2x538 (NBIFSWDSCFG::AP_CNTL)

Read-write. Reset: 0000_0000h.

The Alternate Protocol Control register controls Alternate Protocol specific parameters.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x538;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

Bits	Description
31:16	AP_VENDOR_ID. Read-only. Reset: 0000h. Captures the Vendor ID associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.
15:5	AP_DETAILS. Read-only. Reset: 000h. Captures the Alternate Protocol Details associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.
4:3	Reserved.
2:0	AP_USAGE_INFORMATION. Read-only. Reset: 0h. Captures the Modified TS Usage associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.

BXXD00F2x540 (NBIFSWDSCFG::AP_DATA2)

Read-only. Reset: 0000_0000h.

The Alternate Protocol Data 2 register reports the values associated with the selected Alternate Protocol.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x540;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000540; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:24	Reserved.
23:0	MODIFIED_TS_INFORMATION_2. Read-only. Reset: 00_0000h. Captures the Modified TS Information 2 associated with the Alternate Protocol for the lane of the Port specified by AP_INDEX_SELECT.

BXXD00F2x544 (NBIFSWDSCFG::AP_SELECTIVE_ENABLE_MASK)

Reset: 0000_0001h.

Alternate Protocol Selective Enable Mask register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x544;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000544; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:1	AP_SELECTIVE_ENABLE_MASK_31_1. Read-write. Reset: 0000_0000h. When Alternate Protocol Negotiation Global Enable bit is set, controls if the corresponding Alternate Protocol is permitted for the lane of the Port. This field is a bit vector that covers all other supported Alternate Protocol for the lanes of the Port. This field is sticky.
0	AP_SELECTIVE_ENABLE_MASK_0. Read-only. Reset: 1. When Alternate Protocol Negotiation Global Enable bit is set, controls if the corresponding Alternate Protocol is permitted for the lane of the Port. Bit 0 corresponds to the standard PCI Express protocol.

BXXD00F2x570 (NBIFSWDSCFG::PCIE_RTR_ENH_CAP_LIST)

Read-only.

Readiness Time Reporting Extended Capability header.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x570;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000570; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31:20	NEXT_PTR. Read-only. Reset: 580h. Contains the offset to the next PCI Express capability structure or 000h if no other items exist.
19:16	CAP_VER. Read-only. Reset: Fixed,1h. A PCI-SIG defined version number that indicates the version of the capability structure.
15:0	CAP_ID. Read-only. Reset: Fixed,0022h. A PCI-SIG defined ID number that indicates the nature and format of the extended capability.

BXXD00F2x574 (NBIFSWDSCFG::RTR_DATA1)

Read-only.

Readiness Time Reporting 1 register.

_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x574;

BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]

_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000574; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h

Bits	Description
31	VALID. Read-only. Reset: 0. 0=Values not Ready. 1=Values are Valid. Indicates if the time values reported in this capability structure are valid.
30:24	Reserved.
23:12	DLUP_TIME. Read-only. Reset: Fixed,000h. When Valid bit is set, indicates the time required for the function to be configuration ready, following the Downstream Port reporting Data Link Layer Active is set. Encodings are the same as for RESET_TIME.
11:0	RESET_TIME. Read-only. Reset: A1Eh. When Valid bit is set, indicates the time required for the function to be configuration ready, following a conventional reset. The lower nine bits indicate the value. The upper three bits indicate the scale used for the value, encoded as: 0 = 1 ns; 1 = 32 ns; 2 = 1024 ns; 3 = 32768 ns; 4 = 1048576 ns; 5 = 33554432 ns.

BXXD00F2x578 (NBIFSWDSCFG::RTR_DATA2)

Read-only.

Readiness Time Reporting 2 register.

`_dev0_instNBIF2SWDS_nbio[1:0]_aliasHOST; BXXD00F2x578;``BXX=PCIERCCFG::SUB_BUS_NUMBER_LATENCY_func0_instPCIE0_nbio0_aliasSMN[SECONDARY_BUS]``_dev0_instNBIF2SWDS_nbio[1:0]_aliasSMN; NBIO[1:0]NBIF2SWDSCFGx00000578; NBIO[1:0]NBIF2SWDSCFG=10[7,5]0_0000h`

Bits	Description
31:24	Reserved.
23:12	D3HOTD0_TIME . Read-only. Reset: 80Ah. When Valid bit is set and Immediate Readiness on Return to D0 bit is clear, indicates the time required for the function to be configuration ready, following a D3hot to D0 transition. Encodings are the same as for RESET_TIME.
11:0	FLR_TIME . Read-only. Reset: Fixed,000h. When Valid bit is set and Function Level Reset Capability is set, indicates the time required for the function to be configuration ready, following a FLR. Encodings are the same as for RESET_TIME.

13.8.4.5 NBIFMM Registers**NBIFMMx10[1...4]0D000 (NBIFMM::REMOTE_PORT_RST_INST0)**

Read-write. Reset: 0000_0000h.

port0 reset-related control for inst0 NBIF.MP's FW knows all BIFs' reset events and makes this sync among different NBIFs.

`_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D000; NBIFMM=0000_0000h``_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D000; NBIFMM=0000_0000h`

Bits	Description
31:1	Reserved.
0	REMOTE_PORT_LINK_RST_INST0 . Read-write. Reset: 0. MP's FW informs port0's link-reset event from inst0 NBIF.

NBIFMMx10[1...4]0D004 (NBIFMM::REMOTE_PF_RST_INST0)

Read-write. Reset: 0000_0000h.

port0-func1 reset-related control for inst0 NBIF. It impacts both PF and corresponding VFs. Now only support port0-func1(MPDMA).

`_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D004; NBIFMM=0000_0000h``_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D004; NBIFMM=0000_0000h`

Bits	Description
31:1	Reserved.
0	REMOTE_PF_FLR_INST0 . Read-write. Reset: 0. MP's FW informs port0-func1's FLR event from inst0 NBIF. It impacts both PF and corresponding VFs.

NBIFMMx10[1...4]0D008 (NBIFMM::REMOTE_SOFT_PF_RST_INST0)

Read-write. Reset: 0000_0000h.

port0-func1 reset-related control for inst0 NBIF, it impacts PF only, but not impacts corresponding VF. Now only support port0-func1(MPDMA).

`_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D008; NBIFMM=0000_0000h``_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D008; NBIFMM=0000_0000h`

Bits	Description
31:1	Reserved.
0	REMOTE_SOFT_PF_FLR_INST0 . Read-write. Reset: 0. MP's FW informs port0-func1's FLR event from inst0 NBIF. It impacts PF only, not impacts corresponding VF.

NBIFMMx10[1...4]0D00C (NBIFMM::REMOTE_DEVICE_POWER_CTRL_INST0)

Read-write. Reset: 0000_0000h.

port0 power-state-related control for inst0 NBIF.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D00C; NBIFMM=0000_0000h

port0 power-state-related control for inst13 NBIF.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D68C; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D68C; NBIFMM=0000_0000h

Bits	Description
31:2	Reserved.
1:0	REMOTE_DEVICE_POWER_STATE_INST13. Read-write. Reset: 0h. MP's FW informs port0's Device-power-state from inst13 NBIF.

NBIFMMx10[1...4]0D700 (NBIFMM::REMOTE_PORT_RST_INST14)

Read-write. Reset: 0000_0000h.

port0 reset-related control for inst14 NBIF. MP's FW knows all BIFs' reset events and makes this sync among different NBIFs.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D700; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D700; NBIFMM=0000_0000h

Bits	Description
31:1	Reserved.
0	REMOTE_PORT_LINK_RST_INST14. Read-write. Reset: 0. MP's FW informs port0's link-reset event from inst14 NBIF.

NBIFMMx10[1...4]0D704 (NBIFMM::REMOTE_PF_RST_INST14)

Read-write. Reset: 0000_0000h.

port0-func1 reset-related control for inst14 NBIF. It impacts both PF and corresponding VFs. Now only support port0-func1(MPDMA).

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D704; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D704; NBIFMM=0000_0000h

Bits	Description
31:1	Reserved.
0	REMOTE_PF_FLR_INST14. Read-write. Reset: 0. MP's FW informs port0-func1's FLR event from inst14 NBIF. It impacts both PF and corresponding VFs.

NBIFMMx10[1...4]0D708 (NBIFMM::REMOTE_SOFT_PF_RST_INST14)

Read-write. Reset: 0000_0000h.

port0-func1 reset-related control for inst14 NBIF, it impacts PF only, but not impacts corresponding VF. Now only support port0-func1(MPDMA).

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D708; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D708; NBIFMM=0000_0000h

Bits	Description
31:1	Reserved.
0	REMOTE_SOFT_PF_FLR_INST14. Read-write. Reset: 0. MP's FW informs port0-func1's FLR event from inst14 NBIF. It impacts PF only, not impacts corresponding VF.

NBIFMMx10[1...4]0D70C (NBIFMM::REMOTE_DEVICE_POWER_CTRL_INST14)

Read-write. Reset: 0000_0000h.

port0 power-state-related control for inst14 NBIF.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D70C; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D70C; NBIFMM=0000_0000h

Bits	Description
31:2	Reserved.
1:0	REMOTE_DEVICE_POWER_STATE_INST14. Read-write. Reset: 0h. MP's FW informs port0's Device-power-state from inst14 NBIF.

NBIFMMx10[1...4]0D780 (NBIFMM::REMOTE_PORT_RST_INST15)

Read-write. Reset: 0000_0000h.

port0 reset-related control for inst15 NBIF. MP's FW knows all BIFs' reset events and makes this sync among different NBIFs.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D780; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D780; NBIFMM=0000_0000h

Bits	Description
31:1	Reserved.
0	REMOTE_PORT_LINK_RST_INST15. Read-write. Reset: 0. MP's FW informs port0's link-reset event from inst15 NBIF.

NBIFMMx10[1...4]0D784 (NBIFMM::REMOTE_PF_RST_INST15)

Read-write. Reset: 0000_0000h.

port0-func1 reset-related control for inst15 NBIF. It impacts both PF and corresponding VFs. Now only support port0-func1(MPDMA).

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D784; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D784; NBIFMM=0000_0000h

Bits	Description
31:1	Reserved.
0	REMOTE_PF_FLR_INST15. Read-write. Reset: 0. MP's FW informs port0-func1's FLR event from inst15 NBIF. It impacts both PF and corresponding VFs.

NBIFMMx10[1...4]0D788 (NBIFMM::REMOTE_SOFT_PF_RST_INST15)

Read-write. Reset: 0000_0000h.

port0-func1 reset-related control for inst15 NBIF, it impacts PF only, but not impacts corresponding VF. Now only support port0-func1(MPDMA).

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D788; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D788; NBIFMM=0000_0000h

Bits	Description
31:1	Reserved.
0	REMOTE_SOFT_PF_FLR_INST15. Read-write. Reset: 0. MP's FW informs port0-func1's FLR event from inst15 NBIF. It impacts PF only, not impacts corresponding VF.

NBIFMMx10[1...4]0D78C (NBIFMM::REMOTE_DEVICE_POWER_CTRL_INST15)

Read-write. Reset: 0000_0000h.

port0 power-state-related control for inst15 NBIF.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D78C; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D78C; NBIFMM=0000_0000h

Bits	Description
31:2	Reserved.
1:0	REMOTE_DEVICE_POWER_STATE_INST15. Read-write. Reset: 0h. MP's FW informs port0's Device-power-state from inst15 NBIF.

NBIFMMx10[1...4]0D7F0 (NBIFMM::REMOTE_AER_STATUS)

Read-write. Reset: 0000_0000h.

remote-AER status for this certain NBIF, which is reported by other master-nodes' AER.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D7F0; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D7F0; NBIFMM=0000_0000h

Bits	Description
31:16	Reserved.
15:0	REMOTE_AER_STATE_VECTOR. Read-write. Reset: 0000h. remote-AER-status. Bit7: 1-is VF ; 0-is PF. Bit6-0: when is VF, it is VFID; when is PF, it is meaningless.

NBIFMMx10[1...4]0D800 (NBIFMM::REMOTE_VF_RST_DW0_INST0)

Read-write. Reset: 0000_0000h.

port0-func1's each VF's reset-related control for inst0 NBIF, DW0.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D800; NBIFMM=0000_0000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D800; NBIFMM=0000_0000h

Bits	Description
31:25	Reserved.
24	REMOTE_VF3_FLR_INST0. Read-write. Reset: 0. MP's FW informs port-func1's VF3's FLR event from inst0 NBIF.
23:17	Reserved.
16	REMOTE_VF2_FLR_INST0. Read-write. Reset: 0. MP's FW informs port-func1's VF2's FLR event from inst0 NBIF.
15:9	Reserved.
8	REMOTE_VF1_FLR_INST0. Read-write. Reset: 0. MP's FW informs port-func1's VF1's FLR event from inst0 NBIF.
7:1	Reserved.
0	REMOTE_VF0_FLR_INST0. Read-write. Reset: 0. MP's FW informs port-func1's VF0's FLR event from inst0 NBIF.

NBIFMMx10[1...4]0D804 (NBIFMM::REMOTE_VF_RST_DW1_INST0)

Read-write. Reset: 0000_0000h.

port0-func1's each VF's reset-related control for inst0 NBIF, DW1.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIFMMx10[2:1]0_D804; NBIFMM=0000_0000h_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIFMMx10[4:3]0_D804; NBIFMM=0000_0000h

Bits	Description
31:25	Reserved.
24	REMOTE_VF7_FLR_INST0. Read-write. Reset: 0. MP's FW informs port-func1's VF7's FLR event from inst0 NBIF.
23:17	Reserved.
16	REMOTE_VF6_FLR_INST0. Read-write. Reset: 0. MP's FW informs port-func1's VF6's FLR event from inst0 NBIF.
15:9	Reserved.
