Bits	Description
31	PCIESWUS_SELECTION . Read-write. Reset: 0. Only used for SWDS in certain variants. 0: select PCIE0.SWUS; 1: select PCIE1.SWUS.
30	HDP_P2P_DIRECT_ADD_ADJUST . Read-write. Reset: 1. 1: change the address decode for hdp p2p write; 0: keep original design
29	DMA_ALL_RST_PROTECT_STS_SEL . Read-write. Reset: 0. 0: slvErr ; 1: DecErr.
28	PME_TURNOFF_MODE . Read-write. Reset: 0. PME_TURNOFF handling depend on FW. 0: bypass; 1: rely on FW.
27	PORT_DSTATE_BYPASS_MODE . Read-write. Reset: 1. 1: bypass FW for port's dstate change. 0: send RSMU interrupt for port's dstate change.
26	DMA_2ND_REQ_DIS . Read-write. Reset: 0. 1: disable 2nd ReqCmd send in the 1st ReqCmd's successive data sending cycle nBIF's DMA path.
25	ATS_MSG_BLOCK_IN_RST . Read-write. Reset: 1. 1: Enable the blocking for ATS message from ATHUB/NTB/MPDMATF_SDP when flr/linkrst in gmi.
24	PCIE_CAPABILITY_PROT_DIS . Read-write. Reset: 0. 1: disable PCIe cfg space access protection for those capability registers not enabled.
23	STFETCH_BLOCK_IN_RST . Read-write. Reset: 0. 1: Enable the blocking and flushing for stfetch trans from MPDMATF when flr/linkrst in gmi.
22	HST_FLUSH_CLR_LOCK_EN . Read-write. Reset: 1. 1: flush can clear the lock status of read-rsp-arbiter, 0: can't clear
21	HST_FLUSH_DEFER_EN . Read-write. Reset: 1. 1: defer flush behavior when there is pending trans in pipeline, 0: not defer
20	RCC_GMI_TD_FORCE_ZERO . Read-write. Reset: 0. 1: force-waive to use zero for TD (ECRC GEN) for all RCC generated requests.
19	DMA_ADDR_KEEP_PH . Read-write. Reset: 1. 1: force-waive to keep lowest addr[1:0] (PH) for DMA requests. 0: only maintain for Translation Request (NW bit).
18	DMA_FORCE_VF_AS_PF_SRIOVEN_LOW . Read-write. Reset: 0. 1: force-waive VF DMA request as PF when SRIOV_EN=0;
17	DMA_ATOMIC_FAILED_STS_SEL . Read-write. Reset: 0. 0: slvErr ; 1: DecErr.
16	DMA_ATOMIC_LENGTH_CHK_DIS . Read-write. Reset: 0. 1: disable atomic trans vector length/addr check in DMA direction.
15	HRP_CHAIN_DISABLE . Read-write. Reset: 0. 1: lock host arbiter if trans' Reqchain==1.
14	HST_ARB_CHAIN_LOCK_NP . Read-write. Reset: 0. 1: lock host arbiter if trans' Reqchain==1.
13	GSI_SET_PRECEEDINGWR_DIS . Read-write. Reset: 0. 0=Enable. 1=Disable. Disable setting rd_req_state_preceedingWrPresent to 1.
12	GSI_RD_SPLIT_STALL_NPWR_DIS . Read-write. Reset: 0. 0=Enable. 1=Disable. When read is in the process of splitting, 0 -- np-write will be stalled, 1 -- np-write will not be stalled.
11	GSI_RD_SPLIT_STALL_FLUSH_EN . Read-write. Reset: 0. 0=Disable. 1=Enable. When read is in the process of splitting, 0 -- incoming flush will not be stalled, 1 -- incoming flush will be stalled.
10	GSI_SST_ARB_CHAIN_LOCK . Read-write. Reset: 0. 1: lock gsi's sst arbiter if trans' Reqchain==1.
9	HST_ARB_CHAIN_LOCK_P . Read-write. Reset: 0. 1: lock host arbiter if trans' Reqchain==1.
8	DMA_CHAIN_BREAK_IN_RCMODE . Read-write. Reset: 0. 1: break chain based on PCIe MPS in RC mode; 0: don't affect original chain.
7:4	DMA_VC4_NON_DVM_STS . Read-write. Reset: 2h. Select RspStatus returned when detecting transaction other DVMOpReq/DVMSyncReq received on VC-4.

3	Reserved.
2:1	VWIRE_SRC_UNITID_CHECK_EN . Read-write. Reset: 2h. 0: ignore target unitID check. 1: check source unitID be PCIE ports and ntb-alias. 2: only PCIE port-0 and ntb-alias unitID. 3: reserved.
0	VWIRE_TARG_UNITID_CHECK_EN . Read-write. Reset: 0. 1: check unitID field in virtual wire trans' address. 0: ignore target unitID check. swus to nbif is always p2p smn vwire, so should always be 0 with no unitid check

NBIO0NBIFMISC0x00000014...NBIO1NBIFMISC2x00000014 (NBIFMM::BIFC_MISC_CTRL1)

Read-write. Reset: 8090_8C04h.

BIFC miscellaneous control registers.

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFMISC[2:0]x00000014; NBIO0NBIFMISC[2:0]=[1053A000,1023A000,1013A000]h

Bits	Description
31:30	GMI_MSG_BLOCKLVL_SEL. Read-write. Reset: 2h. ReqBlockLevel setting for MSG sent from GMI.
29	GMI_CPLBUF_EN. Read-write. Reset: 0. 1: enable GMI's cpl buffer. only valid when cplbuf present.
28	GMI_FORCE_NOT_SEND_NON_BASEVC_RSPCREDIT. Read-write. Reset: 0. 1: force-waive not send NON-Base VCs (P/NP) WRRSP/RDRSP credits to upstream components.
27	GMI_WRSIZEDFL_REQATTR_MASK. Read-write. Reset: 0. 1: force-waive to clear ReqAttr for WrSizedFull
26	GMI_WRSIZED_REQATTR_MASK. Read-write. Reset: 0. 1: force-waive to clear ReqAttr for WrSized
25	GMI_RDSIZEDDW_REQATTR_MASK. Read-write. Reset: 0. 1: force-waive to clear ReqAttr for RdSizedDW
24	GMI_RDSIZED_REQATTR_MASK. Read-write. Reset: 0. 1: force-waive to clear ReqAttr for RdSized
23	GMI_ATOMIC_POISON_FOR_AERLOG. Read-write. Reset: 1. 1: log poisoned atomic request all the time; 0: log poisoned atomic request when request transfer to RC.
22	DMAWRREQ_HSTWRRSP_ORDER_FORCE_VALUE. Read-write. Reset: 0. 1: force-waive do check for all; 0: force-waive not do check for all.
21	DMAWRREQ_HSTWRRSP_ORDER_FORCE. Read-write. Reset: 0. force-waive to do order check for all DMAWr v.s VC0 HostWrRsp. 1: take FORCE_VALUE to do force-waive check (1) or not check(0)
20	GSI_SDP_RDRSP_DATA_FORCE0_FOR_ERROR. Read-write. Reset: 1. 1: force-waive to override rdata to all-0 for all rdrsp from downstream SDP rdrsp channel. ignored if GSI_SDP_RDRSP_DATA_FORCE1_FOR_ERROR==1.
19	GMI_BIH_EP_BME_DROP_DIS. Read-write. Reset: 0. 1: force-waive to disable GMI's endpoint bme check for BIH.
18	GMI_BIH_DN_BME_DROP_DIS. Read-write. Reset: 0. 1: force-waive to disable GMI's downstream port's bme check for BIH.
17	GMI_RCC_EP_BME_DROP_DIS. Read-write. Reset: 0. 1: force-waive to disable GMI's endpoint bme check for RCC
16	GMI_RCC_DN_BME_DROP_DIS. Read-write. Reset: 0. 1: force-waive to disable GMI's downstream port's bme check for RCC
15	UPS_SDP_RDY_TIE1. Read-write. Reset: 1. 1: force-waive all nBIF to upstream component's SDP *Rdy to 1.
14	DMAWRREQ_HSTRDRSP_ORDER_FORCE_VALUE. Read-write. Reset: 0. 1: force-waive do check for all; 0: force-waive not do check for all.
13	DMAWRREQ_HSTRDRSP_ORDER_FORCE. Read-write. Reset: 0. force-waive to do order check for all DMAWr v.s HostRdRsp. 1: take FORCE_VALUE to do force-waive check (1) or not check(0)
12	DROP_OTHER_HT_ADDR_REQ. Read-write. Reset: 0. drop DMA sdp req if address hit HT address range, but not io/cfg/msg.
11:10	HST_UNSUPPORT_SDPCMD_DATASTS. Read-write. Reset: 3h. sdp datastatus bits for unsupported SDP cmd need dataRsp. 0: NODATA ; 1: DATAERR ; 2: RETRANSMIT ; 3: VALID
9:8	HST_UNSUPPORT_SDPCMD_STS. Read-write. Reset: 0h. 0: SC; 1: UR; 2: CA; 3: reserved.
7	GMI_ATOMIC_POISON_DROP. Read-write. Reset: 0. 1: drop poisoned atomic request; 0: forward upstream.
6	GSI_RDWR_BALANCE_DIS. Read-write. Reset: 0. 1: disable GSI's read/write bandwidth balance, keep legacy wr always pass rd; 0: read/write request balanced.
5	GSI_SDP_RDRSP_DATA_FORCE1_FOR_ERROR. Read-write. Reset: 0. 1: force-waive to override rdata to all-1 for all rdrsp from downstream SDP rdrsp channel.
4	GSI_SMN_WORST_ERR_STSTATUS. Read-write. Reset: 0. 0: CA; 1: UR.

3	DMA_RSP_POISON_CPLD_REPORT . Read-write. Reset: 0. 1: report poisoned CPLD in DMA response path; 0: don't report it.
2	DMA_REQ_ACSVIO_REPORT . Read-write. Reset: 1. 1: report ACS violation in DMA request path; 0: don't report it.
1	DMA_REQ_POISON_REPORT . Read-write. Reset: 0. 1: report poisoned in DMA request path; 0: don't report it.
0	THT_HST_CPLD_POISON_REPORT . Read-write. Reset: 0. 1: report poisoned response for downstream port as passing; 0: don't report it.

Bits	Description
31	NBIF_CFG_PG_EXIT_OVERRIDE . Read-write. Reset: 0. Only for debug use.1, bif is forced to exit from PG mode; if this bit is set,it will avoid entering pg-mode.
30	NBIF_PG_PCIE_NBIF_LD_MASK . Read-write. Reset: 1. 0:PCIE_NBIF_link_down will not impact PG/MGCG; 1:PCIE_NBIF_link_down will impact PG/MGCG, when it;s 1, nbif can not enter PG/MGCG
29:24	NBIF_CFG_REFCLK_CYCLE_FOR_200NS . Read-write. Reset: 14h. proper setting for 200ns time stamp based on refclk.
23:17	Reserved.
16	NBIF_PG_CLK_PERM2 . Read-write. Reset: 0. 1: when nbif is already in PG(iso-enable asserts), force-disable MGCG -- make nbif's (including gdc's & shub's if gdc_pg is adp) clk branches always running.
15	Reserved.
14	NBIF_PG_DS_ALLOW_DIS . Read-write. Reset: 1. 1: SHUB_CLK#_DS_ALLOW would have no effect for PG; 0: DS_ALLOW affect PG.
13	NBIF_PG_CLK_PERM1 . Read-write. Reset: 1. 1: when nbif is on the way to enter PG, force-disable MGCG -- make nbif's (including gdc's & shub's if gdc_pg is adp) all clk branches always-running.
12:11	Reserved.
10	NBIF_PG_ENDP_D3_ONLY . Read-write. Reset: 0. 1: PG is only permitted when all endpoint's Dstate are D3. Include USB-S5 in nbif
9:5	NBIF_CFG_SHUBCLK_1_IDLE_HYSTERESIS . Read-write. Reset: 04h. controls the number of consecutive clocks when IP is idle before asserting PGMST_PGSLV_pwrGate_ready, for SHUBCLK1.
4:0	NBIF_CFG_SHUBCLK_0_IDLE_HYSTERESIS . Read-write. Reset: 04h. controls the number of consecutive clocks when IP is idle before asserting PGMST_PGSLV_pwrGate_ready, for SHUBCLK0.

NBIO0NBIFMISC0x000000F0...NBIO1NBIFMISC2x000000F0 (NBIFMM::SMN_MST_EP_CNTL3)

nBIF SMN_MST EP control register group3.

nbif SDXI remote control register for INST12 NBIF.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIO0NBIFMISCSEC[1:0]x00000240; NBIO0NBIFMISCSEC[1:0]=10[2:1]3_3000h

_inst[NBIF[1:0]]_nbio1_aliasSMN; NBIO1NBIFMISCSEC[1:0]x00000240; NBIO1NBIFMISCSEC[1:0]=10[4:3]3_3000h

Bits	Description
31:25	Reserved.
24	TF_RMT_VLD_TO_INST12. Read-write. Reset: 0. enable bit of the capability of sending remote_LUT and remote_AER, routing to INST12 NBIF. 1-enable.
23:20	Reserved.
19:0	TF_RMT_ADDR_TO_INST12. Read-write. Reset: 0_0101h. bit 39:20 of SMN_ADDR routing to INST12 NBIF, for send MPDMA's remote_LUT and remote_AER. Within a single die: nbif0-101, nbif1-102, nbif2-103, nbif3-104. But note that SMN -aper-assigned nbif0/1/2/3 has no fixed relationship with INST number.

**NBIO0NBIFMISCSEC0x00000244...NBIO1NBIFMISCSEC1x00000244
(NBIFMM::TF_REMOTE_CTRL_TO_INST13)**

Read-write. Reset: 0000_0101h.

nbif SDXI remote control register for INST13 NBIF.

_inst[NBIF[1:0]]_nbio0_aliasSMN; NBIO0NBIFMISCSEC[1:0]x00000244; NBIO0NBIFMISCSEC[1:0]=10[2:1]3_3000h

Bits	Description
15:9	Reserved.
8	DPA_COMPLIANCE_MODE. Read-write. Reset: 1. 0=Functional Mode behaviour, expect driver/firmware to be loaded to service DPA interrupt. 1=Compliance Mode behaviour, only select this mode to run PCIECV/PTC testing. Enable Compliance behaviour for Function 0.
7:5	Reserved.
4:0	SUBSTATE_STATUS. Read-write. Reset: 00h. Indicates current substate for Function 0.

**NBIO0NBIFRCC0x000035BB...NBIO1NBIFRCCSTRAP2x00000163
(NBIFMM::PCIE_F0_DPA_SUBSTATE_PWR_ALLOC_0)**

Read-write. Reset: FAh.

Private register for F0 Substate 0 Power Allocation Register.

Bits	Description
31	STRAP_LINK_DOWN_RESET_EN. Read-write. Reset: 0. Enable reset request for Link Down event.
30	STRAP_BIGAPU_MODE. Read-write. Reset: 0. BigAPU mode selection.0-SWDS+EP, 1-RC+EP
29	STRAP_CFG0_RD_VF_BUSNUM_CHK_EN. Read-write. Reset: 0. Enable BusNumber check for VF on CFG-0 Read transaction.
28	Reserved.
27	STRAP_NO_RO_ENABLED_P2P_PASSING. Read-write. Reset: 0. Set DEVICE_CAP2.NO_RO_ENABLE_P2P_PASSING.
26	STRAP_QUICKSIM_START. Read-write. Reset: 0. QuickSim Mode.
25	STRAP_BIF_KILL_GEN4. Read-write. Reset: 0. GEN4 mode disable.
24	STRAP_GEN3_DIS. Read-write. Reset: 0. Pin strap for GEN3 disable.
23:18	Reserved.
17	STRAP_RX_IGNORE_TC_ERR_DN. Read-write. Reset: 0. Ignore errors for TLPs violating TC/VC mapping in Downstream Port.
16	STRAP_RX_IGNORE_TC_ERR. Read-write. Reset: 0. Ignore errors for TLPs violating TC/VC mapping in EP.
15	STRAP_RX_IGNORE_SHORTPREFIX_ERR_DN. Read-write. Reset: 0. Ignore errors for TLPs with Local Prefix.
14	STRAP_RX_IGNORE_MAX_PAYLOAD_ERR. Read-write. Reset: 0. Ignore errors for TLPs violating Max Payload size.
13	STRAP_RX_IGNORE_MSG_ERR. Read-write. Reset: 0. Ignore errors for TLPs with malformed message requests.
12	STRAP_RX_IGNORE_EP_ERR. Read-write. Reset: 0. Ignore errors for TLPs with poisoned data.
11	STRAP_PME_SUPPORT_COMPLIANCE_EN. Read-write. Reset: 1. Indicates the power states in which the device may generate a PME.
10	STRAP_NBIF_IGNORE_ERR_INFLR. Read-write. Reset: 0. Ignore EP error when FLR is in progress.
9	STRAP_MSI_FIRST_BE_FULL_PAYLOAD_EN. Read-write. Reset: 1. Enable 1BE = 1111 default is 1BE = 0011 for MSI.
8	STRAP_BIF_KILL_GEN3. Read-write. Reset: 0. GEN3 mode disable.
7	STRAP_PX_CAPABLE. Read-write. Reset: 0. BACO mode enable.
6	STRAP_BIOS_ROM_EN_PIN. Read-write. Reset: 0. Pin strap for ROM enable.
5:3	Reserved.
2	STRAP_VGA_DIS_PIN. Read-write. Reset: 0. Pin strap for VGA Disable.
1	Reserved.
0	STRAP_GEN4_DIS_PIN. Read-write. Reset: 0. Pin strap for GEN4 disable.

NBIO0NBIFRCCSTRAP0x00000804...NBIO1NBIFRCCSTRAP2x00000804 (NBIFMM::RCC_BIF_STRAP1)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRCCSTRAP[2:0]x00000804; NBIO0NBIFRCCSTRAP[2:0]=[10531000,10231000,10131000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFRCCSTRAP[2:0]x00000804; NBIO1NBIFRCCSTRAP[2:0]=[10731000,10431000,10331000]h	
Bits	Description
31	STRAP_AP_EN_DN. Read-write. Reset: 0. Enable Alternate Protocol in down stream port.
30	STRAP_AP_EN. Read-write. Reset: 0. Enable Alternate Protocol in EP function.
29	STRAP_DLF_EN_EP. Read-write. Reset: 0. Enable Data Link Feature for EP.
28:27	STRAP_GSI_SMN_POSTWR_MULTI_EN. Read-write. Reset: 1h. 00: not support outstanding, 01: 2 outstanding, 10: 3 outstanding, 11: reserved.
26:24	Reserved.
23	STRAP_BIF_SLOT_POWER_SUPPORT_EN. Read-write. Reset: 0. Enable feature for slot_power_limit and slot_power_value (only usable for SW-DS+EP configuraion).
22	STRAP_BIF_PSN_UR_RPT_EN. Read-write. Reset: 1. Enable UR Aer log for poisoned TLP.
21	STRAP_MARGIN_EN. Read-write. Reset: 0. Enable Margining.
20	STRAP_PHY_16GT_EN. Read-write. Reset: 0. Enable PHY 16GT.
19	STRAP_DLF_EN. Read-write. Reset: 0. Enable Data Link Feature.
18	STRAP_BIF_IOV_LKRST_DIS. Read-write. Reset: 0. Disable Link Reset in Virtualization.
17	STRAP_LINK_RST_CFG_ONLY. Read-write. Reset: 0. set to 1 the link reset only reset PCIE config aperture.
16:15	STRAP_SWREV_LSB2. Read-write. Reset: 0h. SW reversion value lsb 2bit to RSMU.
14:13	STRAP_HWREV_LSB2. Read-write. Reset: 0h. HW reversion value lsb 2bit to RSMU.
12	STRAP_SWUS_APER_PREFETCHABLE. prefetchable/non-prefetchable for SW-US BAR . AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Reserved AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Read-write Reset: _instNBIF2_nbio[1:0]_aliasSMN: 0
11:10	STRAP_SWUS_AP_SIZE. aperture size for SW-US aperture (0-16KB, 1-32KB, 2-64KB, 3-128KB). AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Reserved AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Read-write Reset: _instNBIF2_nbio[1:0]_aliasSMN: 0h
9	STRAP_SWUS_64BAR_EN. 64bit- BAR or 32bit BAR for SW-US aperture. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Reserved AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Read-write Reset: _instNBIF2_nbio[1:0]_aliasSMN: 0
8	STRAP_SWUS_APER_EN. Aperture Enable for SW-US BAR . AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Reserved AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Read-write Reset: _instNBIF2_nbio[1:0]_aliasSMN: 1
7	STRAP_MARGINING_READY. Read-write. Reset: 0. Indicates when the Margining feature is ready to accept margining commands.
6	STRAP_MARGINING_USES_SOFTWARE. Read-write. Reset: 0. Indicates when this software is initialized.
5	STRAP_IGNORE_E2E_PREFIX_UR_SWUS. Read-write. Reset: 0. Ignore UR caused by E2E Prefix for SW-US.
4	Reserved.
3	STRAP_ECRC_INTERMEDIATE_CHK_EN. Read-write. Reset: 1. Enable ECRC error log when downstream port behaves as intermediate receiver.
2	WRITE_DISABLE. Read-write. Reset: 0. Strap Write Disable.
1	ROMSTRAP_VALID. Read-write. Reset: 0. when rom strap valid it should be config to 1 by RSMU.
0	FUSESTRAP_VALID. Read-write. Reset: 0. when fuse strap valid it should be config to 1 by RSMU.

NBIO0NBIFRCCSTRAP0x00000808...NBIO1NBIFRCCSTRAP2x00000808 (NBIFMM::RCC_BIF_STRAP2)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRCCSTRAP[2:0]x00000808; NBIO0NBIFRCCSTRAP[2:0]=[10531000,10231000,10131000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFRCCSTRAP[2:0]x00000808; NBIO1NBIFRCCSTRAP[2:0]=[10731000,10431000,10331000]h	
Bits	Description
31	STRAP_VLINK_PMETO_LDN_EXIT_BY_LNKRST_DIS. Read-write. Reset: 0. Disable exiting link-down (which is triggered by PME_TO_ACK) by link reset event.
30:25	Reserved.
24	STRAP_PWRBRK_DEGLITCH_BYPASS. Read-write. Reset: 0. Set 1 to bypass the deglitch logic for input from PWRBRK# pad.
23:16	STRAP_PWRBRK_DEGLITCH_CYCLE. Read-write. Reset: 0Ah. Indicate the number cycles for glitch logic could filter(in unit of Cpl_VDDCR_BACO_REFCLK).
15:13	Reserved.
12	STRAP_USB_PD_FUNC_DIS. disable USB/PD function. AccessType: _instNBIF0_nbio[1:0]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]_aliasSMN: Reserved Reset: _instNBIF0_nbio[1:0]_aliasSMN: 0
11:10	Reserved.
9	STRAP_ACS_MSKSEV_EP_HIDE_DIS. Read-write. Reset: 0. Disable hiding Mask/Severity of ACS Violation Error for EP functions.
8	STRAP_GMI_DNS_SDP_CLKREQ_TOGGLE_DIS. Read-write. Reset: 0. Disable deassertion of ClkReq on GMI DNS SDP interface with SION.
7	STRAP_SWUS_SEC_LVL_OVRD_EN. Read-write. Reset: 0. Enalbe SecureLvl override for transaction initiated from PCIE link (with special UnitID).
6	STRAP_SWITCH_LINKDOWN_DROP_DMA. Read-write. Reset: 1. 0-- DONT drop dma trans when Switch device receives linkdown reset; 1-- Drop dma trans when Switch device receives linkdown reset.
5	STRAP_ENDP_LINKDOWN_DROP_DMA. Read-write. Reset: 1. 0-- DONT drop dma trans when EndPoint device receives linkdown reset; 1-- Drop dma trans when EndPoint device receives linkdown reset.
4	STRAP_SUM_IND_ACCESS_DIS. 0-- Enable INDEX/DATA pair access in SWUS MM space; 1-- Disable INDEX/DATA pair access in SWUS MM space. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Reserved AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Read-write Reset: _instNBIF2_nbio[1:0]_aliasSMN: 1
3	STRAP_SUC_IND_ACCESS_DIS. 0-- Enable INDEX/DATA pair access in SWUS CFG space; 1-- Disable INDEX/DATA pair access in SWUS CFG space. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Reserved AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Read-write Reset: _instNBIF2_nbio[1:0]_aliasSMN: 1
2:1	Reserved.
0	STRAP_PCIESWUS_INDEX_APER_RANGE. Read-write. Reset: 1. Enable aper range check for SWUS CFG cspace indirect access.

NBIO0NBIFRCCSTRAP0x0000080C...NBIO1NBIFRCCSTRAP2x0000080C (NBIFMM::RCC_BIF_STRAP3)

Read-write. Reset: 0000_0000h.	
_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRCCSTRAP[2:0]x0000080C; NBIO0NBIFRCCSTRAP[2:0]=[10531000,10231000,10131000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFRCCSTRAP[2:0]x0000080C; NBIO1NBIFRCCSTRAP[2:0]=[10731000,10431000,10331000]h	
Bits	Description
31:16	STRAP_VLINK_PM_L1_ENTRY_TIMER. Read-write. Reset: 0000h. idle timer for PM L1 entry.
15:0	STRAP_VLINK_ASPM_IDLE_TIMER. Read-write. Reset: 0000h. idle timer for ASPM L0s L1 entry.

NBIO0NBIFRCCSTRAP0x00000810...NBIO1NBIFRCCSTRAP2x00000810 (NBIFMM::RCC_BIF_STRAP4)

Read-write. Reset: 0010_0010h.

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRCCSTRAP[2:0]x00000810; NBIO0NBIFRCCSTRAP[2:0]=[10531000,10231000,10131000]h

_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFRCCSTRAP[2:0]x00000810; NBIO1NBIFRCCSTRAP[2:0]=[10731000,10431000,10331000]h

Bits	Description
31:16	STRAP_VLINK_L1_EXIT_TIMER. Read-write. Reset: 0010h. exit time for ASPM L1 or PM L1.
15:0	STRAP_VLINK_L0S_EXIT_TIMER. Read-write. Reset: 0010h. exit time for ASPM L0s.

NBIO0NBIFRCCSTRAP0x00000814...NBIO1NBIFRCCSTRAP2x00000814 (NBIFMM::RCC_BIF_STRAP5)

Read-write. Reset: 3103_0010h.

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRCCSTRAP[2:0]x00000814; NBIO0NBIFRCCSTRAP[2:0]=[10531000,10231000,10131000]h

_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFRCCSTRAP[2:0]x00000814; NBIO1NBIFRCCSTRAP[2:0]=[10731000,10431000,10331000]h

Bits	Description
31	Reserved.
30:28	STRAP_PWRBRK_STATUS_TIMER. Read-write. Reset: 3h. Indicate the number of cycles for nBIF/SHUB to determine the status of Emergency Power Reduction state upon PowerBrake request(Cpl_LCLK).3'b000,No Delay;3'b001,16 cycles;3'b010,32 cycles;3'b011,64 cycles;3'b100,128 cycles;3'b101,256 cycles;3'b110,512 cycles;3'b111,1023 cycles.
27	STRAP_EMER_POWER_REDUCTION_INIT_REQ. Read-write. Reset: 0. Indicate whether the function requires complete or partial initialization upon exit from Emergency Power Reduction State.
26:25	STRAP_EMER_POWER_REDUCTION_SUPPORTED. Read-write. Reset: 0h. Indicate support level of optional Emergency Power Reduction State feature.
24	STRAP_INTERMEDIATERSP_DATA_ALLF_DATA_FORCE. Read-write. Reset: 1. Overall enable/disable switch for GSI intermediate RSP data being masked to all-F.
23:22	STRAP_SMN_ERRRSP_DATA_FORCE. Read-write. Reset: 0h. Overall enable/disable switch for SMN error return data being masked to all-F.
21	STRAP_REG_PROTECTION_DIS. Read-write. Reset: 0. 0:disable register protection. 1:enable register protection.
20	STRAP_SMN_ERR_STATUS_MASK_EN_UPS. Read-write. Reset: 0. 0:Disable SMN error response status for Upstream Port# being masked to SC. 1:Enable SMN error response status for Upstream Port# being masked to SC.
19	STRAP_IGNORE_PSN_ON_VDM1_DIS. Read-write. Reset: 0. Disable ignoring EP error on VDM1 message.
18	STRAP_VLINK_ENTER_COMPLIANCE_DIS. Read-write. Reset: 0. Disable Enter_Compliance mode in Virtual Link.
17	STRAP_VLINK_LDN_ON_SWUS_SECRST_EN. Read-write. Reset: 1. Enable Vlink link down caused by SW-US SecBusReset.
16	STRAP_VLINK_LDN_ON_SWUS_LDN_EN. Read-write. Reset: 1. Enable Vlink link down caused by SW-US link down.
15:0	STRAP_VLINK_LDN_ENTRY_TIMER. Read-write. Reset: 0010h. entry timer for LinkDown.

NBIO0NBIFRCCSTRAP0x00000818...NBIO1NBIFRCCSTRAP2x00000818 (NBIFMM::RCC_BIF_STRAP6)

Read-write. Reset: 0000_0000h.

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRCCSTRAP[2:0]x00000818; NBIO0NBIFRCCSTRAP[2:0]=[10531000,10231000,10131000]h

_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFRCCSTRAP[2:0]x00000818; NBIO1NBIFRCCSTRAP[2:0]=[10731000,10431000,10331000]h

Bits	Description
31:3	Reserved.
2	STRAP_PHY_32GT_EN. Read-write. Reset: 0. Enable PHY 32GT.
1	STRAP_BIF_KILL_GEN5. Read-write. Reset: 0. GEN5 mode disable.
0	STRAP_GEN5_DIS_PIN. Read-write. Reset: 0. Pin strap for GEN5 disable.

NBIO0NBIFRST0x00000000...NBIO1NBIFRST2x00000000 (NBIFMM::HARD_RST_CTRL)

Read-write. Reset: B000_0655h.

RSMU's hard_resetb control.

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRST[2:0]x00000000; NBIO0NBIFRST[2:0]=[10538000,10238000,10138000]h

Bits	Description
31	CORE_RST_EN. Read-write. Reset: 1. Enable to reset core logic reset in hard reset.
30	RELOAD_STRAP_EN. Read-write. Reset: 0. After hard_resetb deassert, one strap_reload pulse generated in nBIF.
29	CORE_STICKY_RST_EN. Read-write. Reset: 1. Enable to reset core sticky logic reset in hard reset.
28	SWUS_SHADOW_RST_EN. Read-write. Reset: 1. Enable to reset switch upstream port's shadow (redirected in BIF) registers in hard reset.
27:24	Reserved.
23	STRAP_RST_EN. Read-write. Reset: 0. Enable to reset nBIF strap registers (BIOS only type) in hard reset.
22:11	Reserved.
10	SION_AON_RESET_EN. Read-write. Reset: 1. Enable reset on SION AON part upon RSMU's hard_resetb.
9	SDP_PORT_RESET_EN. Read-write. Reset: 1. Enable reset on SDP Port control upon RSMU's hard_resetb.
8	Reserved.
7	EP_PRV_STICKY_RST_EN. Read-write. Reset: 0. Private sticky reg reset enable for endpoint device under downstream port(s).
6	EP_PRV_RST_EN. Read-write. Reset: 1. Private dynamic reg reset enable for endpoint device under downstream port(s).
5	EP_CFG_STICKY_RST_EN. Read-write. Reset: 0. Cfg sticky reg reset enable for endpoint device under downstream port(s).
4	EP_CFG_RST_EN. Read-write. Reset: 1. Cfg reg reset enable for endpoint device under downstream port(s).
3	DSPT_PRV_STICKY_RST_EN. Read-write. Reset: 0. Private sticky reg reset enable for downstream port(s).
2	DSPT_PRV_RST_EN. Read-write. Reset: 1. Private dynamic reg reset enable for downstream port(s).
1	DSPT_CFG_STICKY_RST_EN. Read-write. Reset: 0. Cfg sticky reg reset enable for downstream port(s).
0	DSPT_CFG_RST_EN. Read-write. Reset: 1. Cfg reg reset enable for downstream port(s).

NBIO0NBIFRST0x00000004...NBIO1NBIFRST2x00000004 (NBIFMM::RSMU_SOFT_RST_CTRL)

Read-write. Reset: 9000_0000h.

RSMU's soft_resetb control.

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFRST[2:0]x00000004; NBIO0NBIFRST[2:0]=[10538000,10238000,10138000]h

Bits	Description
31	STRAP_D2_SUPPORT_DEV0_F1. Read-write. Reset: 0. Enable D2 Support in EP function.
30	STRAP_D1_SUPPORT_DEV0_F1. Read-write. Reset: 0. Enable D1 Support in EP function.
29	STRAP_LEGACY_DEVICE_TYPE_EN_DEV0_F1. Read-write. Reset: 0. Enable legacy mode of operation 1: native PCIE function 0: legacy function (32BAR VGA IO RdLk).
28	STRAP_FUNC_EN_DEV0_F1. Read-write. Reset: 1. EP Function Enable.
27:24	Reserved.
23:20	STRAP_MINOR_REV_ID_DEV0_F1. Read-write. Set MINOR_REV_ID in EP function. Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0h Reset: _instNBIF2_nbio[1:0]_aliasSMN: 1h
19:16	STRAP_MAJOR_REV_ID_DEV0_F1. Read-write. Reset: 0h. Set MAJOR_REV_ID in EP function.
15:0	STRAP_DEVICE_ID_DEV0_F1. Read-write. Set DEVICE_ID in EP function. Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 14DCh Reset: _instNBIF2_nbio[1:0]_aliasSMN: 14C3h

NBIO0NBIFSTRAP0x00000204...NBIO1NBIFSTRAP2x00000204 (NBIFMM::RCC_DEV0_EPF1_STRAP1)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x00000204; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h

_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFSTRAP[2:0]x00000204; NBIO1NBIFSTRAP[2:0]=[10734000,10434000,10334000]h

Bits	Description
31:16	STRAP_SRIOV_SUPPORTED_PAGE_SIZE_DEV0_F1. Set SRIOV_CAP.SUPPORTED_PAGE_SIZE. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0553h
15:0	STRAP_SRIOV_VF_DEVICE_ID_DEV0_F1. Set DEVICE_ID for VF. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0000h

NBIO0NBIFSTRAP0x00000208...NBIO1NBIFSTRAP2x00000208 (NBIFMM::RCC_DEV0_EPF1_STRAP2)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x00000208; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFSTRAP[2:0]x00000208; NBIO1NBIFSTRAP[2:0]=[10734000,10434000,10334000]h	
Bits	Description
31	STRAP_PASID_PRIV_MODE_SUPPORTED_DEV0_F1. Read-write. Reset: 0. Enable PASID_CAP.PRIV_MODE_SUPPORTED.
30	STRAP_PASID_GLOBAL_INVALIDATE_SUPPORTED_DEV0_F1. Read-write. Reset: 0. Enable PASID_CAP.GLOBAL_INVALIDATE_SUPPORTED.
29	STRAP_PASID_EXE_PERMISSION_SUPPORTED_DEV0_F1. Read-write. Reset: 0. Enable PASID_CAP.EXE_PERMISSION_SUPPORTED.
28	STRAP_PASID_EN_DEV0_F1. Read-write. Reset: 0. Enable PASID cap in EP function.
27	STRAP_PAGE_REQ_EN_DEV0_F1. Enable PRI cap in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
26:24	STRAP_MSI_MULTI_CAP_DEV0_F1. Read-write. Set MSI_CAP.MSI_MULTI_CAP in EP function. Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0h Reset: _instNBIF2_nbio[1:0]_aliasSMN: 5h
23	STRAP_VC_EN_DEV0_F1. Read-write. Reset: 0. Enable VC cap in EP function.
22	Reserved.
21	STRAP_DPA_EN_DEV0_F1. Read-write. Reset: 0. Enable DPA cap in EP function.
20	STRAP_CPL_ABORT_ERR_EN_DEV0_F1. Read-write. Reset: 0. Enable CA error in AER capability in EP function.
19	Reserved.
18	STRAP_ATS_EN_DEV0_F1. Enable ATS cap in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
17	STRAP_ACS_EN_DEV0_F1. Read-write. Reset: 0. Enable ACS cap in EP function.
16	STRAP_AER_EN_DEV0_F1. Read-write. Reset: 0. Enable AER cap in EP function.
15	Reserved.
14	STRAP_MSI_PERVECTOR_MASK_CAP_DEV0_F1. Read-write. Reset: 0. Enable Per-Vector Masking for MSI.
13:9	STRAP_MAX_PASID_WIDTH_DEV0_F1. Read-write. Reset: 10h. Indicates the width of PASID field supported by the ATC.
8	STRAP_RESIZE_BAR_EN_DEV0_F1. Read-write. Reset: 0. Enable RESIZABLE BAR cap.
7	STRAP_NO_SOFT_RESET_DEV0_F1. Read-write. Set PMCSR.NO_SOFT_RESET for EP function. Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0 Reset: _instNBIF2_nbio[1:0]_aliasSMN: 1
6:1	Reserved.
0	STRAP_SRIOV_EN_DEV0_F1. Enable SRIOV cap. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0

NBIO0NBIFSTRAP0x0000020C...NBIO1NBIFSTRAP2x0000020C (NBIFMM::RCC_DEV0_EPF1_STRAP3)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x0000020C; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h

Bits	Description
31	STRAP_RTR_EN_DEV0_F3. Enable Readiness Time Reporting . AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
30	STRAP_TRUE_PM_STATUS_EN_DEV0_F3. Enable communication with SMUMP for Dx state change. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
29	STRAP_CLK_PM_EN_DEV0_F3. strap for CLKREQ# enable. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
28	Reserved.
27	STRAP_SMN_ERR_STATUS_MASK_EN_EP_DEV0_F3. 0:Disable SMN error response status for EP function being masked to SC. 1:Enable SMN error response status for EP function being masked to SC. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
26	STRAP_ALL_MSI_EVENT_SUPPORT_EN_DEV0_F3. Enable all msi event support regardless of MSI_MULTI_CAP. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
25	Reserved.
24	STRAP_PMC_DSI_DEV0_F3. Set PMC .DSI in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
23:21	Reserved.
20	STRAP_MSIX_EN_DEV0_F3. Enable MSIX cap in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
19	STRAP_MSI_CLR_PENDING_EN_DEV0_F3. Enable MSI cap in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
18	STRAP_MSI_EN_DEV0_F3. Enable MSI cap in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
17	STRAP_PWR_EN_DEV0_F3. Enable PWR Budget cap in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
16	STRAP_POISONED_ADVISORY_NONFATAL_DEV0_F3. Enable Poisoned Error log as Advisory NonFatal Error type in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
15:0	STRAP_SUBSYS_ID_DEV0_F3. Set SubSystemID in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 14C1h

NBIO0NBIFSTRAP0x00000610...NBIO1NBIFSTRAP2x00000610 (NBIFMM::RCC_DEV0_EPF3_STRAP4)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x00000610; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFSTRAP[2:0]x00000610; NBIO1NBIFSTRAP[2:0]=[10734000,10434000,10334000]h	
Bits	Description
31	STRAP_AUXPWR_SUPPORT_DEV0_F3. Indicate AuxPower support for EP function. AccessType: _inst[NBIF0_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF0_nbio[1:0]]_aliasSMN: 0
30:28	STRAP_INTERRUPT_PIN_DEV0_F3. Set INTERRUPT_PIN for EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 2h
27:23	STRAP_PME_SUPPORT_DEV0_F3. Set PMC .PME_support for EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 18h
22	STRAP_FLR_EN_DEV0_F3. Enable FLR support in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 0
21	STRAP_ATOMIC_EN_DEV0_F3. Enable 32bit AtomicOP Completer in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 0
20	STRAP_ATOMIC_64BIT_EN_DEV0_F3. Enable 64bit AtomicOP Completer in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 0
19:18	Reserved.
17:9	STRAP_MSIX_PBA_OFFSET_DEV0_F3. For MSIX PBA_Offset bit20 to bit12. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 004h
8:0	STRAP_MSIX_TABLE_OFFSET_DEV0_F3. For MSIX Table_Offset bit20 to bit12. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 002h

NBIO0NBIFSTRAP0x00000614...NBIO1NBIFSTRAP2x00000614 (NBIFMM::RCC_DEV0_EPF3_STRAP5)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x00000614; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFSTRAP[2:0]x00000614; NBIO1NBIFSTRAP[2:0]=[10734000,10434000,10334000]h	
Bits	Description
31	Reserved.
30	STRAP_MSI_EXT_MSG_DATA_CAP_DEV0_F3. Strap register for MSI_MSG_CNTL.MSI_EXT_MSG_DATA_CAP. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 0
29:16	Reserved.
15:0	STRAP_SUBSYS_VEN_ID_DEV0_F3. Set SubSystemVendorID in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: Read-write AccessType: _inst[NBIF2_nbio[1:0]]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]]_aliasSMN: 1022h

NBIO0NBIFSTRAP0x00000618...NBIO1NBIFSTRAP2x00000618 (NBIFMM::RCC_DEV0_EPF3_STRAP6)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x00000618; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFSTRAP[2:0]x00000618; NBIO1NBIFSTRAP[2:0]=[10734000,10434000,10334000]h	
Bits	Description
31:26	Reserved.
25	STRAP_APER3_PREFETCHABLE_EN_DEV0_F3. Set prefetchable for APER#3 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
24	STRAP_APER3_EN_DEV0_F3. Enable APER#3 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
23:18	Reserved.
17	STRAP_APER2_PREFETCHABLE_EN_DEV0_F3. Set prefetchable for APER#2 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
16	STRAP_APER2_EN_DEV0_F3. Enable APER#2 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
15:10	Reserved.
9	STRAP_APER1_PREFETCHABLE_EN_DEV0_F3. Set prefetchable for APER#1 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
8	STRAP_APER1_EN_DEV0_F3. Enable APER#1 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1
7	Reserved.
6:4	STRAP_APER0_AP_SIZE_DEV0_F3. Set aperture size for APER#0 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 7h
3:2	Reserved.
1	STRAP_APER0_PREFETCHABLE_EN_DEV0_F3. Set prefetchable for APER#0 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 0
0	STRAP_APER0_EN_DEV0_F3. Enable APER#0 in EP function. AccessType: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: Read-write AccessType: _instNBIF2_nbio[1:0]_aliasSMN: Reserved Reset: _inst[NBIF[1:0]]_nbio[1:0]_aliasSMN: 1

NBIO0NBIFSTRAP0x0000061C...NBIO1NBIFSTRAP2x0000061C (NBIFMM::RCC_DEV0_EPF3_STRAP7)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x0000061C; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h

Bits	Description
31	Reserved.
30	STRAP_MSI_EXT_MSG_DATA_CAP_DEV1_F1. Strap register for MSI_MSG_CNTL.MSI_EXT_MSG_DATA_CAP. AccessType: _instNBIF0_nbio[1:0]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]_aliasSMN: Reserved Reset: _instNBIF0_nbio[1:0]_aliasSMN: 0
29:27	Reserved.
26	STRAP_SATA_DID_RAID_EN_1_DEV1_F1. SATA DeviceID protection for 7917h. AccessType: _instNBIF0_nbio[1:0]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]_aliasSMN: Reserved Reset: _instNBIF0_nbio[1:0]_aliasSMN: 0
25	STRAP_SATA_DID_RAID_EN_0_DEV1_F1. SATA DeviceID protection for 7916h. AccessType: _instNBIF0_nbio[1:0]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]_aliasSMN: Reserved Reset: _instNBIF0_nbio[1:0]_aliasSMN: 0
24	STRAP_SATAIDP_EN_DEV1_F1. Enable SATA IDP capability in SATA function. AccessType: _instNBIF0_nbio[1:0]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]_aliasSMN: Reserved Reset: _instNBIF0_nbio[1:0]_aliasSMN: 1
23:16	Reserved.
15:0	STRAP_SUBSYS_VEN_ID_DEV1_F1. Set SubSystemVendorID in EP function. AccessType: _instNBIF0_nbio[1:0]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]_aliasSMN: Reserved Reset: _instNBIF0_nbio[1:0]_aliasSMN: 1022h

NBIO0NBIFSTRAP0x00001218...NBIO1NBIFSTRAP2x00001218 (NBIFMM::RCC_DEV1_EPF1_STRAP6)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x00001218; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h	
_inst[NBIF[2:0]]_nbio1_aliasSMN; NBIO1NBIFSTRAP[2:0]x00001218; NBIO1NBIFSTRAP[2:0]=[10734000,10434000,10334000]h	
Bits	Description
31:1	Reserved.
0	STRAP_APER0_EN_DEV1_F1. Enable APER#0 in EP function. AccessType: _instNBIF0_nbio[1:0]_aliasSMN: Read-write AccessType: _inst[NBIF[2:1]]_nbio[1:0]_aliasSMN: Reserved Reset: _instNBIF0_nbio[1:0]_aliasSMN: 1

NBIO0NBIFSTRAP0x0000121C...NBIO1NBIFSTRAP2x0000121C (NBIFMM::RCC_DEV1_EPF1_STRAP7)

_inst[NBIF[2:0]]_nbio0_aliasSMN; NBIO0NBIFSTRAP[2:0]x0000121C; NBIO0NBIFSTRAP[2:0]=[10534000,10234000,10134000]h

1h	Mapping EXOKAY to RRESP=2'b01 (EXOKAY)
2h	Mapping EXOKAY to RRESP=2'b10 (SLVERR)
3h	Mapping EXOKAY to RRESP=2'b10 (DECERR)
15:14	EXOKAY_WR_MAP . Read-write. Reset: 0h. Mapping control for EXOKAY on SDP WrRspStatus to AXI_BRESP.
ValidValues:	
Value	Description
0h	Mapping EXOKAY to BRESP=2'b00 (OKAY)
1h	Mapping EXOKAY to BRESP=2'b01 (EXOKAY)
2h	Mapping EXOKAY to BRESP=2'b10 (SLVERR)
3h	Mapping EXOKAY to BRESP=2'b10 (DECERR)
13:12	DATERR_MAP . Read-write. Reset: 2h. Mapping control for DATERR on SDP RdRspDataStatus to AXI_RRESP.

	ValidValues:	
	Value	Description
	0h	Mapping DATERR to RRESP=2'b00
	1h	Mapping DATERR to RRESP=2'b01, this setting is not recommended
	2h	Mapping DATERR to RRESP=2'b10
11:10	3h	Mapping DATERR to RRESP=2'b11
	BLKLVL_MAP . Read-write. Reset: 1h. Mapping control for SDP ReqBlockLevel[1:0].	
	9:8 REQRSPPASSPW_NVC0_MAP . Read-write. Reset: 1h. Mapping control for SDP ReqRspPassPW attribute for Non-VC-0 request.	
	ValidValues:	
	Value	Description
9:8	0h	Always set ReqRspPassPW to 1'b0
	1h	Always set ReqRspPassPW to 1'b1
	2h	Propagate from AxUSER.RO
	3h	Reserved.
7:6	REQRSPPASSPW_VC0_MAP . Read-write. Reset: 1h. Mapping control for SDP ReqRspPassPW attribute for VC-0 request.	
	ValidValues:	
	Value	Description
	0h	Always set ReqRspPassPW to 1'b0
	1h	Always set ReqRspPassPW to 1'b1
7:6	2h	Propagate from AxUSER.RO
	3h	Reserved.
5:4	REQPASSPW_NVC0_MAP . Read-write. Reset: 1h. Mapping control for SDP ReqPassPW attribute for Non-VC-0 request.	
	ValidValues:	
	Value	Description
	0h	Always set ReqPassPW to 1'b0
	1h	Always set ReqPassPW to 1'b1
5:4	2h	Propagate from AxUSER.RO
	3h	Reserved.
3:2	REQPASSPW_VC0_MAP . Read-write. Reset: 0h. Mapping control for SDP ReqPassPW attribute for VC-0 request.	
	ValidValues:	
	Value	Description
	0h	Always set ReqPassPW to 1'b0
	1h	Always set ReqPassPW to 1'b1
3:2	2h	Propagate from AxUSER.RO
	3h	Reserved.
1:0	NSNOOP_MAP . Read-write. Reset: 0h. Mapping control for Snoop/NoSnoop attribute.	
	ValidValues:	
	Value	Description
	0h	Always set NoSnoop to 1'b0 (default)
	1h	Always set NoSnoop to 1'b1
1:0	2h	Set NoSnoop to 1'b1 when AxCACHE[3:2]==2'b00, otherwise set NoSnoop to 1'b0
	3h	Reserved.

4	DBGMSK_MAP . Read-write. Reset: 0. Setting for SDP OrigDataDbgMsk. For PSP with bypass=1, default value set to 1'b1; For others, default value set to 1'b0.
3:0	SECLVL_MAP . Read-write. Reset: 6h. Control SDP ReqSecLevel assignment. For MP0(PSP), default value set to 0x0(highest secure level); Others, default value set to 0x6(IO).

NBIO[0...1]NBIFSHUBMM0x0001D028 (SYSHUBMM::A2S_CNTL2_SEC_CL10)

Read-write. Reset: 0000_0006h.

A2S control register for [MPIO](#).`_instNBIF0_nbio[1:0]_aliasSMN; NBIO[1:0]NBIFSHUBMM0x0001D028; NBIO[1:0]NBIFSHUBMM0=01[6,4]0_0000h`

Bits	Description
31:7	Reserved.
6	BYPASS_OVERRIDE_VALUE . Read-write. Reset: 0. Override the SDP Bypass value. 0: bypass value is 0; 1: bypass value is 0.
5	BYPASS_OVERRIDE_EN . Read-write. Reset: 0. Override the SDP Bypass value. 0: disable override; 1: enable override.
4	DBGMSK_MAP . Read-write. Reset: 0. Setting for SDP OrigDataDbgMsk. For PSP with bypass=1, default value set to 1'b1; For others, default value set to 1'b0.
3:0	SECLVL_MAP . Read-write. Reset: 6h. Control SDP ReqSecLevel assignment. For MP0(PSP), default value set to 0x0(highest secure level); Others, default value set to 0x6(IO).

NBIO[0...1]NBIFSHUBMM0x0001D02C (SYSHUBMM::A2S_CNTL2_SEC_CL11)

Read-write. Reset: 0000_0000h.

A2S control register for MP0.

`_instNBIF0_nbio[1:0]_aliasSMN; NBIO[1:0]NBIFSHUBMM0x0001D02C; NBIO[1:0]NBIFSHUBMM0=01[6,4]0_0000h`

Bits	Description
31:7	Reserved.
6	BYPASS_OVERRIDE_VALUE . Read-write. Reset: 0. Override the SDP Bypass value. 0: bypass value is 0; 1: bypass value is 0.
5	BYPASS_OVERRIDE_EN . Read-write. Reset: 0. Override the SDP Bypass value. 0: disable override; 1: enable override.
4	DBGMSK_MAP . Read-write. Reset: 0. Setting for SDP OrigDataDbgMsk. For PSP with bypass=1, default value set to 1'b1; For others, default value set to 1'b0.
3:0	SECLVL_MAP . Read-write. Reset: 0h. Control SDP ReqSecLevel assignment. For MP0(PSP), default value set to 0x0(highest secure level); Others, default value set to 0x6(IO).

NBIO[0...1]NBIFSHUBMM0x0001D030 (SYSHUBMM::A2S_CNTL2_SEC_CL12)

Read-write. Reset: 0000_0000h.

A2S control register for MP0_S.

`_instNBIF0_nbio[1:0]_aliasSMN; NBIO[1:0]NBIFSHUBMM0x0001D030; NBIO[1:0]NBIFSHUBMM0=01[6,4]0_0000h`

Bits	Description
31:7	Reserved.
6	BYPASS_OVERRIDE_VALUE . Read-write. Reset: 0. Override the SDP Bypass value. 0: bypass value is 0; 1: bypass value is 0.
5	BYPASS_OVERRIDE_EN . Read-write. Reset: 0. Override the SDP Bypass value. 0: disable override; 1: enable override.
